

AMP NETCONNECT SL Series Toolless Jack

The AMP NETCONNECT SL Series Toolless Jack offers an alternate termination method to traditional 110-style punchdowns. A hinged stuffer cap provides a means to lace and dress the wire pairs prior to termination. Once the pairs are properly placed and trimmed, the stuffer cap is snapped onto the jack terminals using a common pair of pliers. A view window aids in ensuring proper termination and placement of wires. This termination technique provides consistently high performance levels from jack to jack. The Toolless Jack eliminates the need for a specialized punchdown tool, making it particularly attractive for SOHO (Small Office/Home Office), residential and other "do-it-yourself" markets.

The AMP NETCONNECT Toolless Jack is available in both Category 3 and Category 5e performance levels, for both UTP and FTP/S-FTP (shielded) cables. The jack is compatible with existing AMP NETCONNECT 110Connect faceplates. Its slim profile will also offer the advantage of higher density when used with the new SL Series Outlet, 4-port duplex mounting strap and SL Series furniture outlet.

- Terminates with common pliers
- An integral part of the AMP NETCONNECT Enhanced Category 5 System
- Available in Category 3 (RJ11) and Category 5e performance
- Hinged stuffer simplifies assembly
- Offers increased density at the outlet when used with new SL Series Outlets, duplex mounting strap, and FLEX-MODE faceplates
- Compatible with existing AMP NETCONNECT 110Connect faceplates
- 8-Position jacks exceed all performance requirements for existing and proposed high-speed network applications:
 - Gigabit Ethernet
 - 622 Mbps and 1.2 Gbps ATM
 - Digital and analog broadband video
 - Internets/Intranets
 - High-end multimedia
