

Part Number: 2643801902  
 Frequency Range: Broadband Frequencies 25-300 MHz (43 material)  
 Description: 43 ROUND CABLE CORE  
 Application: Suppression Components  
 Where Used: Cable Component  
 Part Type: Round Cable EMI Suppression Cores  
 Preferred Part: ✓

## Mechanical Specifications

Weight: 4.700 (g)

## Part Type Information

Fair-Rite offers a broad selection of ferrite EMI suppression cable cores in several materials with guaranteed minimum impedance specifications.

-All cable cores have been burnished to remove the sharp edges.

-The column 'H' (Oe) gives for each cable core the calculated dc bias field in oersted for 1 turn and 1 ampere direct current. The actual dc H field in the application, is this value of 'H' times the actual NI (ampere-turns) product. For the effect of the dc bias on the impedance of the core material, see the figures 18-23 in the application note 'How to choose Ferrite Components for EMI Suppression'.

-Suppression cable cores are controlled for impedances only. The impedances listed are typical values. Minimum impedance values are specified for the + marked frequencies. The minimum guaranteed impedance is the listed impedance less 20%.

-Single turn impedance tests for 31, 43 and 46 material cores are performed on the 4193A Vector Impedance Meter. The 61 material parts are tested on the 4191A RF Impedance Analyzer. Cores are tested with the shortest Practical wire length.

-Performance curves for individual components can be viewed by clicking on the part number in the chart.

-For smaller suppression parts, refer to the EMI Suppression Bead section of our catalog.

-For any cable suppression core not listed here, feel free to contact our customer service group for availability and pricing.

-The 'C' dimension, the core length, can be modified to suit specific applications.

-Our Expanded Cable and Suppressor Kit (part number 0199000005) Contains a selection of these suppression cores.

-Explanation of Part Numbers: Digits 1 & 2 =product class, 3 & 4 material grade and last digit 2 = burnished.

## Mechanical Specifications

| Dim | mm    | mm<br>tol | nominal<br>inch | inch<br>misc. |
|-----|-------|-----------|-----------------|---------------|
| A   | 12.70 | ±0.25     | 0.500           | -             |
| B   | 7.90  | ±0.20     | 0.312           | -             |
| C   | 12.70 | ±0.40     | 0.500           | -             |

## Legend

+ Test frequency

Preferred parts, the suggested choice for new designs, have shorter lead times and are more readily available.

The column H(Oe) gives for each bead the calculated dc bias field in oersted for 1 turn and 1 ampere direct current. The actual dc H field in the application is this value of H times the actual NI (ampere-turn) product. For the effect of the dc bias on the impedance of the bead material, see figures 18-23 in the application note How to choose Ferrite Components for EMI Suppression.

A ½ turn is defined as a single pass through a hole.

$\Sigma l/A$  - Core Constant

$A_e$  - Effective Cross-Sectional Area

$A_L$  - Inductance Factor ( $\frac{L}{N^2}$ )

N/AWG - Number of Turns/Wire Size for Test Coil

$l_e$  - Effective Path Length

$V_e$  - Effective Core Volume

NI - Value of dc Ampere-turns

## Ferrite Material Constants

|                                       |  |
|---------------------------------------|--|
| Specific Heat .....                   | 0.25 cal/g/°C                          |
| Thermal Conductivity .....            | 10x10 <sup>-3</sup> cal/sec/cm/°C      |
| Coefficient of Linear Expansion ..... | 8 - 10x10 <sup>-6</sup> /°C            |
| Tensile Strength .....                | 4.9 kgf/mm <sup>2</sup>                |
| Compressive Strength .....            | 42 kgf/mm <sup>2</sup>                 |
| Young's Modulus .....                 | 15x10 <sup>3</sup> kgf/mm <sup>2</sup> |
| Hardness (Knoop) .....                | 650                                    |
| Specific Gravity .....                | ≈ 4.7 g/cm <sup>3</sup>                |

*The above quoted properties are typical for Fair-Rite MnZn and NiZn ferrites.*

See next page for further material specifications.

### 43 Material Characteristics:

| Property  | Unit             | Symbol                | Value           |
|---|------------------|-----------------------|-----------------|
| Initial Permeability @ B < 10 gauss                         |                  | $\mu_i$               | 800             |
| Flux Density @ Field Strength                               | gauss<br>oersted | B<br>H                | 2900<br>10      |
| Residual Flux Density                                       | gauss            | $B_r$                 | 1300            |
| Coercive Force  | oersted          | $H_c$                 | 0.45            |
| Loss Factor @ Frequency                                     | $10^{-6}$<br>MHz | $\tan \delta / \mu_i$ | 250<br>1.0      |
| Temperature Coefficient of Initial Permeability (20 - 70°C) | %/°C             |                       | 1.25            |
| Curie Temperature   | °C               | $T_c$                 | >130            |
| Resistivity   | $\Omega$ cm      | $\rho$                | $1 \times 10^5$ |

This NiZn is our most popular ferrite for suppression of conducted EMI from 20 MHz to 250 MHz. This material is also used for inductive applications such as high frequency common-mode chokes.

EMI suppression beads, beads on leads, SM beads, multi-aperture cores, round cable EMI suppression cores, round cable snap-its, flat cable EMI suppression cores, flat cable snap-its, miscellaneous suppression cores, bobbins, and toroids are all available in 43 material.

**Complex Permeability vs. Frequency**

Measured on a 17/10/6mm toroid using the HP 4284A and the HP 4291A.

**Percent of Original Impedance vs. Temperature**

Measured on a 2643000301 using the HP4291A.

**Initial Permeability vs. Temperature**

Measured on a 17/10/6mm toroid at 100kHz.

**Hysteresis Loop**

Measured on a 17/10/6mm toroid at 10kHz.

### 2643801902

Impedance, reactance, and resistance vs. frequency.
