

# Optocoupler—DIP Package

## OPIA400, OPIA410 through OPIA413

### Features:

- 5,000 Vrms electrical isolation
- Choice of a Single and Dual LED
- Phototransistor or Photo Darlington Sensor
- Low-cost plastic Dual-In-Line (DIP) package

### Approval Agency:

- UL Certification No: E58730
- VDE Pending

### Description:

The OPIA series optocouplers are designed for applications that use an analog output (Phototransistor or Photo Darlington) in a dual-in-line package. A wide selection of configurations are available. With typical isolation voltage of 5,000 Volts RMS, these products meet typical power system isolation requirements.

Theory of operation: The LED transmitter is used to illuminate the Photosensor providing electrical isolation between two power systems while maintaining the ability to transmit information from one power system to the other. In many applications, analog signal levels may be required to be transmitted between two power systems while maintaining isolation between the power systems up to 5,000 volts RMS. A variety of LED and photosensor configurations are available depending on the system requirements.

The ratio Current Transfer Ratio (CTR) is identified between the output current and input current for analog photosensors. CTR ratios can range from as low as 5 to over 9,000 depending on the device.

$$CTR = \frac{\text{Photosensor - Current}}{\text{LED - Current}} = \frac{20mA}{10mA} * 100 = 200$$

All DIP product is shipped in a shipping tube with "TU" identified on the end of the part number.  
Example: OPI400DTU is a 4-Pin DIP shipped in a tube (TU).

### Applications:

- High voltage isolation, up to 5,000 Volts RMS
- PCBoard power system isolation
- Industrial equipment power isolation
- Medical equipment power isolation
- Office equipment

RoHS

## OPIA400, OPIA410 through OPIA413

### Absolute Maximum Ratings ( $T_A = 25^\circ\text{C}$ unless otherwise noted)

Storage Temperature	-55° C to +125° C
Operating Temperature	-30° C to +100° C
Isolation voltage (1 minute)	5,000 Vrms
Total Package Power Dissipation	200 mW
Lead Soldering Temperature (1/16" (1.6 mm) from case for 5 seconds with soldering iron)	260° C

### Input Diode

Continuous Forward Current	50 mA
Peak Forward current (1 $\mu\text{s}$ pulse width, 300 pps)	1 A
Reverse Voltage OPIA400, OPIA411, OPIA412, OPIA413 OPIA410, OPIA412	6 V -
Power Dissipation	70 mW

### Output Phototransistor

Collector-Emitter Voltage OPIA400, OPIA410 OPIA412 OPIA411 OPIA413	60 V 300 V 35 V 350 V
Emitter-Collector Voltage OPIA400, OPIA410, OPIA411 OPIA412 OPIA413	6 V 0.1 V 7 V
Collector Current OPIA400, OPIA410, OPIA413 OPIA412 OPIA411	50 mA 150 mA 80 mA
Power Dissipation All except the part numbers noted below OPIA412	150 mW 200 mW

### Label Identification

#### DESCRIPTION:

Size: 3" (7.4 cm) X 2.2" (5.5 cm)  
 Lettering shall be black on white background.  
 Format shall be as:

#### Notes:

- The DATE CODE is a 4-digit code for date of manufacture where YY is the last two digits of the year, and WW is week number of manufacture.
- The LOT I.D. is the manufacturing location lot identification where Y is the year of manufacture, NNNN is a sequential lot identifier, and DDD is the day of the year of manufacture. – or use equivalent label format.
