description

The TISPL758LF3 is an integrated combination of a symmetrical bidirectional overvoltage protector and an asymmetrical bidirectional overvoltage protector. It is designed to limit the peak voltages on the line terminals of the Lucent Technologies L7581/2/3 LCAS (Line Card Access Switches). An LCAS may also be referred to as a Solid State Relay, SSR, i.e. a replacement of the conventional electro-mechanical relay.

The TISPL758LF3D voltages are chosen to give adequate LCAS protection for all switch conditions. The most potentially stressful

device symbol

Terminals T, R and G correspond to the alternative line designators of A, B and C

condition is low level power cross when the LCAS switches are closed. Under this condition, the TISPL758LF3D limits the voltage and corresponding LCAS dissipation until the LCAS thermal trip operates and opens the switches.

Under open-circuit ringing conditions, the line ring (R) conductor will have high peak voltages. For battery backed ringing, the ring conductor will have a larger peak negative voltage than positive i.e. the peak voltages are asymmetric. An overvoltage protector with a similar voltage asymmetry will give the most effective protection. On a connected line, the tip (T) conductor will have much smaller voltage levels than the open-circuit ring conductor values. Here a symmetrical voltage protector gives adequate protection.

Overvoltages are normally caused by a.c. power system or lightning flash disturbances which are induced or conducted on to the telephone line. These overvoltages are initially clipped by protector breakdown clamping until the voltage rises to the breakover level, which causes the

Support from the Microelectronics Group of Lucent Technologies Inc. is gratefully acknowledged in the definition of the TISPL758LF3D voltage levels and for performing TISPL758LF3D evaluations.

device to crowbar into a low-voltage on state. This low-voltage on state causes the current resulting from the overvoltage to be safely diverted through the device. For negative surges, the high crowbar holding current prevents d.c. latchup with the SLIC current, as the surge current subsides. The TISPL758LF3 is guaranteed to voltage limit and withstand the listed international lightning surges in both polarities.

These protection devices are supplied in a small-outline surface mount (D) plastic package. The difference between the TISPL758LF3D and TISPL758LF3DR versions is shown in the ordering information.

absolute maximum ratings, $T_A = 25^\circ\text{C}$ (unless otherwise noted)

RATING		SYMBOL	VALUE	UNIT
Repetitive peak off-state voltage	R-G terminals T-G terminals	V_{DRM}	-180, +105 -105, +105	V
Non-repetitive peak on-state pulse current (see Notes 1, 2 and 3)

8/20 μs (ANSI C62.41, 1.2/50 μs voltage wave shape)			120	
10/160 μs (FCC Part 68, 10/160 μs voltage wave shape)			60	
5/200 μs (VDE 0433, 2.0 kV, 10/700 μs voltage wave shape)			50	
0.2/310 μs (I3124, 2.0 kV, 0.5/700 μs voltage wave shape)		I_{TSP}	50	A
5/310 μs (ITU-T K20/21, 2.0 kV, 10/700 μs voltage wave shape)			50	
5/310 μs (FTZ R12, 2.0 kV, 10/700 μs voltage wave shape)			50	
10/560 μs (FCC Part 68, 10/560 μs voltage wave shape)			45	
10/1000 μs (GR-1089-CORE, 10/1000 μs voltage wave shape)			35	
Non-repetitive peak on-state current (see Notes 1, 2 and 3)				
full sine wave	50 Hz 60 Hz	I_{TSM}	16 20	A
Repetitive peak on-state current, 50/60 Hz, (see Notes 2 and 3)		I_{TSM}	2x1	A
Initial rate of rise of on-state current, Exponential current ramp, Maximum ramp value < 70 A		di_T/dt	150	A/ μs
Junction temperature		T_J	-40 to +150	$^\circ\text{C}$
Storage temperature range		T_{stg}	-40 to +150	$^\circ\text{C}$

- NOTES: 1. Above the maximum specified temperature, derate linearly to zero at 150 $^\circ\text{C}$ lead temperature.
 2. Initially the TISPL758LF3 must be in thermal equilibrium with 0 $^\circ\text{C}$ < T_J < 70 $^\circ\text{C}$.
 3. The surge may be repeated after the TISPL758LF3 returns to its initial conditions.

plastic small-outline package

This small-outline package consists of a circuit mounted on a lead frame and encapsulated within a plastic compound. The compound will withstand soldering temperature with no deformation, and circuit performance characteristics will remain stable when operated in high humidity conditions. Leads require no additional cleaning or processing when used in soldered assembly.

- NOTES: A. Leads are within 0,25 (0.010) radius of true position at maximum material condition.
 B. Body dimensions do not include mold flash or protrusion.
 C. Mold flash or protrusion shall not exceed 0,15 (0.006).
 D. Lead tips to be planar within ±0,051 (0.002).

tape dimensions

NOTES: A. Taped devices are supplied on a reel of the following dimensions:-

MDXXAT

Reel diameter: 330 +0,0/-4,0 mm
 Reel hub diameter: 100 ±2,0 mm
 Reel axial hole: 13,0 ±0,2 mm

B. 2500 devices are on a reel.
