

PIDG (Pre-Insulated Diamond Grip)

Product Facts

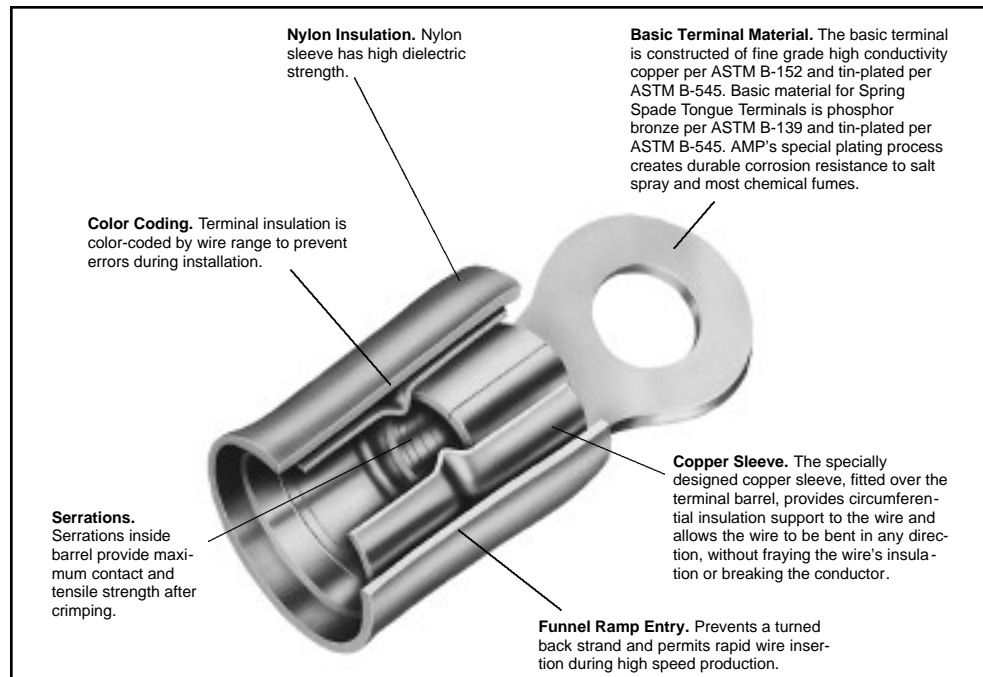

- Pre-insulated terminal designed for uniform reliability in most difficult circuit environments
- PIDG Terminals consist of tin plated copper or tin plated phosphor bronze body for spring spades with a copper sleeve and insulation sleeve fitted over terminal barrel
- Design of the tool dies and construction of the terminal allows for uniform insulation thickness under crimping pressure, transmitting this pressure evenly to the center of the crimp area

The AMP Mated Tool/Terminal Concept

- AMP compression crimping produces crimps for a given size wire and terminal that are alike in appearance and performance
- Terminal and crimping tool are designed as uniform matched devices
- Dies are precision-engineered from the finest hard-metal alloys
- Crimping pressure is controlled by a ratchet device on the hand tool or a corresponding pre-calibration in the crimping jaws of AMP automated crimping machines

The Crimp

- When done properly, crimping pressure can neither overstress nor under-stress the terminal barrel—machined dies fully bottom to the precise crimp height
- Resulting termination is free of contamination
- Resistant to shock and critical environments
- Tensile strength approaches that of the wire itself
- PIDG Terminals meet or exceed the requirements of MIL-T-7928, Type II, Class 1 and 2
- Refer to AMP Qualified Products for Military Application, Catalog 73-159 for Military Specification Number to AMP Part Number cross reference

Temperature Rating: 105°C Max.

Note: Over size expansions are provided in vinyl insulation only.

Material

Insulation — Nylon, UL 94V-2
Terminal Body — Copper per ASTM B-152
Plating — Tin per ASTM B-545
Metallic Sleeve — Copper per ASTM B-152
Plating — Nickel per QQ-N-290 or Tin per ASTM B-545

*Available in small packaging quantities.

¹Insulation—Vinyl

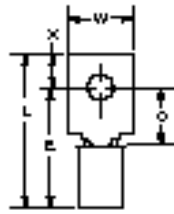

²Terminal Body— Brass per MIL-C-50.

Note: "C" dimension applies from edge of metal wire barrel to center of stud hole.

PIDG (Pre-Insulated Diamond Grip) (Continued)

Rectangular Tongue Terminals (Continued)

Material

Insulation — Nylon except where noted.
Terminal Body and Metallic Sleeve — Copper per ASTM B-152
Plating — Tin per ASTM B-545

PIDG FASTON

Product Facts

- Pre-insulated terminal designed for uniformed reliability in most difficult circuit environment
- Consists of an unplated or tin-plated brass body or a tin-plated phosphor bronze body with a specially designed copper sleeve and insulation sleeve fitted over the terminal barrel
- Design of the tool dies and construction of the terminal permits uniform insulation thickness under crimping pressure, transmitting this pressure evenly to the center of the crimp area

The AMP Mated Tool/Terminal Concept

- AMP compression crimping produces crimps for a given size wire and terminal that are alike in appearance and performance
- Terminal and the crimping tool are designed as uni-form matched devices
- Dies are precision-engineered from the finest hard-metal alloys
- Crimping pressure is controlled by a ratchet device on the hand tool or a corresponding pre-calibration in the crimping jaws of AMP automated crimping machines

The Crimp

- When done properly, crimping pressure can neither overstress nor under-stress the terminal barrel—machined dies fully bottom to the precise crimp height
- Resulting termination is free of contamination
- Resistant to shock and critical environments
- Tensile strength approaches that of the wire itself

Nylon Insulation. Nylon sleeve has high dielectric strength.

Color Coding. Terminal insulation is color-coded by wire range to prevent errors during installation.

Copper Sleeve. The specially designed copper sleeve, fitted over the terminal barrel, provides circumferential insulation support to the wire and allows the wire to be bent in any direction, without fraying the wire's insulation or breaking the conductor.

Funnel Ramp Entry. Prevents a turned back strand and rapid wire insertion during high speed production.

Serrations. Serrations inside barrel provide maximum contact and tensile strength after crimping.

Basic Terminal Material. The basic terminal is constructed of fine grade high conductivity brass per ASTM B-36 or phosphor bronze per ASTM B-139. The brass terminal is either unplated or tin-plated per ASTM B-545. The phosphor bronze terminal is tin-plated per ASTM B-545. AMP's special plating process creates durable corrosion resistance to salt spray and most chemical fumes.

Temperature Rating: 105°C Max.

Receptacles
(Insulation Restricting)

.110
Series
Standard

.110
Series
Low Insertion

Material

Insulation — Nylon, UL 94V-2
Receptacle Body — Brass per ASTM B-36
Receptacle Style B — Dimple with wire stop
Plating — Tin per ASTM B-545
Metallic Sleeve — Copper per ASTM B-152
Plating — Tin per ASTM B-545 or Nickel per QQ-N-290
