

General Description:

The Electro-Voice® Models US600EL and US602FL are low impedance handheld dynamic microphones with a push-to-talk switch. The model US600EL is an omnidirectional microphone with a tailored frequency response for high articulation speech transmission under normal ambient noise conditions. The model US602FL is a bidirectional, noise-cancelling microphone designed for high articulation speech transmission in high ambient noise conditions. The microphone can be used in noisy situations where successful voice communications would otherwise be impossible. Both microphones have a high output level and great performance stability through wide extremes of temperature and humidity, making the US600EL and US602FL an excellent choice for communications. Typical applications include amateur radio, police, marine services, commercial and paging. The US602FL noise-cancelling characteristic makes it especially effective for use in public address applications where severe feedback due to microphone position in relation to loudspeakers is a problem. The US600EL and US602FL are designed for comfortable, convenient use. The functional styling, the extremely durable Polycarbonate housing and the lifetime performance, capable of long-term survival in the most demanding applications.

Architects' and Engineer's Specifications, US600EL

The microphone shall be a dynamic omnidirectional handheld type with uniform frequency response from 100 to 7,000 Hz. The case shall be molded of high impact plastic with black textured finish. A panel mounting bracket shall be supplied. The microphone shall have a net weight of 243.5 g (8.6 oz) including cable. The microphone shall have a nominal impedance value of 150 ohms. Output level shall be -55 dB (0 dB = 1 mW/10 dynes/cm²). Cable shall be 4-conductor (2-shielded), rubber-jacketed, black coiled cord extendible to 1.8 m (6 ft.). Microphone circuit shall be balanced with respect to ground. An integral press-to-talk switch shall be provided, connected in a manner such that microphone element is shorted in "off" position while microphone line to amplifier remains "open" for multiple microphone paging applications. Cable circuits are isolated from microphone circuits. The Electro-Voice model US600EL is specified.

Architects' and Engineer's Specifications, US602FL

The microphone shall be a noise-cancelling dynamic type, with uniform frequency response from 200 to 5,000 Hz.

Technical Specifications:

	US600EL	US602FL
Generation Element:	Dynamic	
Frequency Response:	100 to 7,000 Hz	200 - 5,000 Hz
Polar Pattern: (see chart)	Omnidirectional	Noise Cancelling
Impedance:	150 Ohms	
Output Level (0 dB = 1mW/10 dynes/cm ²):	-55 dB	-60 dB
Case Material:	Polycarbonate	
Finish:	Textured Black	
Switch Type:	Push-to-Talk	
Cable	4-Conductor, 2 Shielded, PVC Black	
Dimension, Width:	68.3 mm (2.68")	
Dimension, Length:	98.4 mm (3.88")	
Dimension, Depth:	45.3 mm (1.78")	58.0 mm (2.28")
Net Weight (with Cable):	243.5 g (8.6 oz.)	280.0 g (9.9 oz.)

The case shall be molded of high impact plastic with black textured finish. A panel mounting bracket shall be supplied. The microphone shall have a net weight of 280.0 g (9.9 oz) including cable. The microphone shall have a nominal impedance value of 150 ohms. Output level shall be -60 dB (0 dB = 1 mW/10 dynes/cm²). Cable shall be 4-conductor (2-shielded), rubber-jacketed, black coiled cord extendible to 1.8 m (6 ft.). Microphone circuit shall be balanced with respect to ground. An integral press-to-talk switch shall be provided, connected in a manner such that microphone element is shorted in "off" position while microphone line to amplifier remains "open" for multiple microphone paging applications. Cable circuits are isolated from microphone circuits. The Electro-Voice model US602FL is specified.
