

Quick Reference GuideAMP CT Connector Series

The AMP CT connectors are a miniature wire-to-board and wire-to-wire interconnect solution. The AMP CT connector series has proven performance in its harness making capability. A variety of harness-making machines are available ranging from hand tools for low volume production to high-speed automatic crimping machines for medium to high volume productions. AMP high-speed automatic crimping machines are easy to operate, eliminating the need for tedious work of changing parts inside the equipment to adapt to changes in harness styles. Two types of housings are available, including Crimp and Mass Terminated (MT), which are preloaded with insulation displacement contacts. The Box or shrouded headers are highly resistant to scooping at mating/unmating.

FEATURES AND BENEFITS

- 2 kinds of termination method: IDC, Crimp
- Discrete wire interconnect
- Circuits range from 2-30
- AWG 22~30
- · Kinks for self-retention on boards
- RoHS compliant
- Recognized under the component program of Underwriters Laboratories Inc., file No. E28476
- Certified by Canadian Standards Association, File No. LR 7189-133

PRODUCT APPLICATIONS

- Business Equipment
- Industrial Machines
- PC
- Printer
- FaxC-TV
- C-1 V
 Audio
- Air conditioner
- Anywhere where signals or power are routed

How to select an AMP CT connector part number

The charts on this page highlight the relationship between the number of contacts (positions) to the part number. Please see the sample chart below that was designed to help you select the correct part number for your needs. For single digit position to dash numbers, attach the digit to the end base number. For double digit position to dash numbers, attach the first digit to the front of the part number, add a dash and the base part number, then follow the base part number with a dash and the second digit.

Example Base Part Number	Your Criteria	Example Position to Das	h Selec	tion				End Part Number Based on Criteria
		Position	8	9	10	11	12	
173977	You require and 8 position MT housing	Dash Number	-8	-9	-10	-11	-12	173977-8
173977	You require and 12 position MT housing	Dash Number	-8	-9	-10	-11	-12	1-173977-2

Cable Side Connectors

Mass Termination (MT) vs. Crimp Poke

MT AMP CT Housing

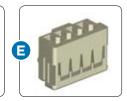

Shows unstripped wires inserted into an MT housing.

Crimp AMP CT Contact

Shows a contact crimped onto a stripped wire to be inserted into a crimp housing.

^{*} Applicators listed are used in the AMP-O-LECTRIC Model G, AMP 3K/40 and AMP 5K/40 Terminators. Call the Tooling Assistance Center at 800-722-1111 for applicator numbers for Automatic Cut, Strip and Terminate Leadmakers.

** Power tooling options are also available. Call Tooling Sales at 888-777-5917 (717-810-2080) for more information

PCB Side Connectors (Single Row + Dual Row)

Common AMP CT Terminology

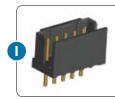

Locating Boss

A boss is a mechanical feature that helps orientate the headers onto the PCB.

Without Kinked Leg

Kinked legs are designed to secure the T/H headers onto the PCB.

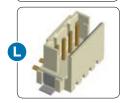

a

With Kinked Leg

Solder Tabs

Solder tabs are designed to secure the SMT headers onto the PCB.

Mount Styles

Header Styles

Card Edge

Box

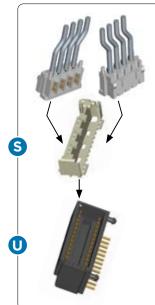

Box headers offer a front and back wall for polarization of the connector.

Standard

Standard headers offer only a single wall for polarization of the connector.

Dual Row Assemblies

Two Single **Row Housings**

Captivating Holder

Dual Row Header

Free Hanging

Panel Mount

Additional Parts

Requires a holder to be used along with two single row housings.

Questions to ask at Design In stage

What wire guage will you be using? More flexibility with AWG when using Crimp vs. MT. Crimp housings accept 22-30 AWG and MT housings accept 24-28 AWG.

Are the connectors available for IDC? Yes, we offer a MT version that is preloaded with IDC contacts.

Is your process automated? MT housings are more suitable for automated processes.

Where can I find information on current rating, voltage and operating temperatures? Please see Product Specification Information.on page 4 of this QRG.

Which is a more standard header, with or without a locating boss?

The most standard headers tend to have a locating boss as it makes it easier for the customer to align the connector onto their board.

What special retention mechanisms are available to help ensure PCB stability? Most of the T/H headers have kinked legs, and the SMT headers have solder tabs to help ensure PCB stability.

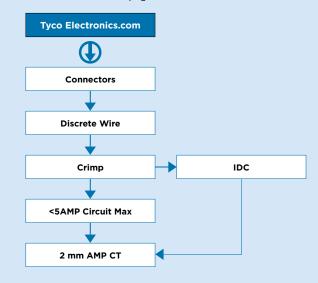

What are my tooling options? Tyco Electronics offers comprehensive tooling options including Manual Pistol-Grips, manual Mini-Press, Pneumatic Mini-press, Semi-Auto DECAM and an Automatic DECAM tool. For more information, please visit tooling.tycoelectronics.com

What is the benefit of choosing Box over Std type headers? Box type headers have an extra wall, that is a more reliable connector design intended to prevent stubbing.
