

4.25GBPS 850NM VCSEL LC TOSA PACKAGE

HFE4192-58X

FEATURES:

- 850nm multi-mode oxide isolated VCSEL
- Capable of modulation operation from DC to 5Gbps
- TO-46 tilt window metal can component, prealigned into LC Sleeve
- Designed for drive currents between 3-15mA average
- Packaged with a back monitor
- Attenuated window can

This product is a high-performance 850nm VCSELs (Vertical Cavity Surface-Emitting Lasers) designed for high-speed data communications and packaged with a custom designed power monitor diode. The power monitor diode can be used with appropriate feedback control circuitry to set a maximum power level for the VCSEL. These combined features simplify design for high data rate communication and eye safety.

The device is designed to convert electrical current into optical power that can be used in fiber optic communications and other applications. As the current varies above threshold, the light intensity increases proportionally.

It is designed to be used with inexpensive silicon or gallium arsenide detectors, but excellent performance can also be achieved with some indium gallium arsenide detectors.

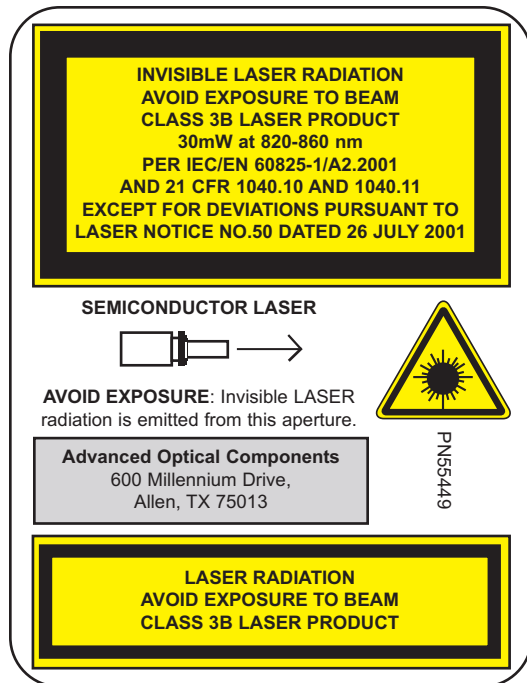

The low drive current requirement makes direct drive from PECL (Positive Emitter Coupled Logic) or ECL (Emitter Coupled Logic) gates possible and eases driver design.

VCSELs produce circularly symmetric, non-astigmatic, narrow divergence beams that, with appropriate lensing, fiber couple all of the emitter power. This LC TOSA product is pre-aligned and focused fiber optic transmitters designed to interface with 50/125 and 62.5/125 μ m multi-mode fiber.

Part Number	Description
HFE4192-581	LC TOSA with attenuated optics, monitor photodiode, normal polarity
HFE4192-582	LC TOSA with attenuated optics, monitor photodiode, reverse polarity

ABSOLUTE MAXIMUM RATINGS

Parameter	Rating
Storage temperature	-40°C to +85°C
Operating temperature	-40°C to +85°C See note 1 (page 3)
Lead solder temperature	260°C, 10 seconds
Laser continuous average current	12mA
Laser peak forward current with pulse width less than 1µs	18mA
Laser reverse voltage	5V
Photodiode reverse voltage	5V
Photodiode reverse current	2mA

NOTICE: Stresses greater than those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operations section for extended periods of time may affect reliability.

ELECTRO-OPTICAL CHARACTERISTICS ($T_A=25^\circ\text{C}$ unless otherwise stated)

NOTES

1. Reliability is a function of temperature, see www.finisar.com/aoc.php for details.
2. For the purpose of these tests, I_F is DC current.
3. Threshold current varies as $(T_A - T_O)^2$. It may either increase or decrease with temperature, depending upon relationship of T_A to T_O . The magnitude of the change is proportional to the threshold at T_O .
4. Slope efficiency is defined as $\Delta P_O / \Delta I_F$.
5. To compute the value of Slope Efficiency at a temperature T, use the following equation:

$$\eta(T) \approx \eta(25^\circ\text{C}) * [1 + (\Delta\eta/\Delta T) * (T - 25)]$$

6. Rise and fall times specifications are the 20% - 80%. Most of the devices will measure <80ps fall time.
7. To compute the value of Series Resistance at a temperature T, use the following equation:

$$R_S(T) \approx R_S(25^\circ\text{C}) * [1 + \Delta R_S / \Delta T * (T - 25)]$$

8. These specifications are for the TOSA component alone. Reflections introduced by any subsequent higher level assembly may affect these values.
9. Monitor current tracking is defined as follows:

$$\text{Deltrk} = \frac{I_{PD}(P_O = 0.75\text{mW}) / 0.75\text{mW}}{I_{PD}(P_O = 0.45\text{mW}) / 0.45\text{mW}}$$

10. Relaxation Oscillation Frequency (ROF) is determined by the relationship:

$$\text{ROF} = \frac{1}{2\pi} \cdot \sqrt{\frac{r-1}{t_c \cdot \tau_2} - \frac{r}{t_2}}$$

Where $r = I_F / I_{TH}$, t_c is the photon lifetime (2.5ps), and τ_2 is the spontaneous emission lifetime (1ns). Both t_c and τ_2 are functions of temperature. When operating at high temperature, the r (I_F / I_{TH}) value can be significantly reduced and still maintain adequate speed performance. This is recommended in order to preserve reliability.

TYPICAL PERFORMANCE CURVES

Emitted Power vs. Current: Power varies approximately linearly with current above threshold.

Threshold Current vs. Temperature: Threshold current varies parabolically with temperature; thus it can be nearly constant for a limited temperature range.

ADVANCED OPTICAL COMPONENTS

Finisar's ADVANCED OPTICAL COMPONENTS division was formed through strategic acquisition of key optical component suppliers. The company has led the industry in high volume Vertical Cavity Surface Emitting Laser (VCSEL) and associated detector technology since 1996. VCSELS have become the primary laser source for optical data communication, and are rapidly expanding into a wide variety of sensor applications. VCSELS' superior reliability, low drive current, high coupled power, narrow and circularly symmetric beam and versatile packaging options (including arrays) are enabling solutions not possible with other optical technologies. ADVANCED OPTICAL COMPONENTS is also a key supplier of Fabrey-Perot (FP) and Distributed Feedback (DFB) Lasers, and Optical Isolators (OI) for use in single mode fiber data and telecommunications networks

LOCATION

- Allen, TX - Business unit headquarters, VCSEL wafer growth, wafer fabrication and TO package assembly.
- Fremont, CA – Wafer growth and fabrication of 1310 to 1550nm FP and DFB lasers.
- Shanghai, PRC – Optical passives assembly, including optical isolators and splitters.

SALES AND SERVICE

Finisar's ADVANCED OPTICAL COMPONENTS division serves its customers through a worldwide network of sales offices and distributors. AOC CAPABILITIES

ADVANCED OPTICAL COMPONENTS' advanced capabilities include:

- 1, 2, 4, 8, and 10Gbps serial VCSEL solutions
- 1, 2, 4, 8, and 10Gbps serial SW DETECTOR solutions
- VCSEL and detector arrays
- 1, 2, 4, 8, and 10Gbps FP and DFB solutions at 1310 and 1550nm
- 1, 2, 4, 8, and 10Gbps serial LW DETECTOR solutions
- Optical Isolators from 1260 to 1600nm range
- Laser packaging in TO46, TO56, and Optical subassemblies with SC, LC, and MU interfaces for communication networks
- VCSELS operating at 670nm, 780nm, 980nm, and 1310nm in development
- Sensor packages include surface mount, various plastics, chip on board, chip scale packages, etc.
- Custom packaging options
