

# 2.3GHz to 2.7GHz MIMO Wireless Broadband RF Transceiver

MAX2839

## General Description

The MAX2839 direct conversion, zero-IF, RF transceiver is designed specifically for 2GHz 802.16e MIMO mobile WiMAX systems. The device incorporates one transmitter and two receivers, with >40dB isolation between each receiver. The MAX2839 completely integrates all circuitry required to implement the RF transceiver function, providing RF to baseband receive path, and baseband to RF transmit path, VCO, frequency synthesizer, crystal oscillator, and baseband/control interface. The device includes a fast-settling sigma-delta RF synthesizer with smaller than 40Hz frequency steps and a crystal oscillator that allows the use of a low-cost crystal in place of a TCXO. The transceiver IC also integrates circuits for on-chip DC-offset cancellation, I/Q error, and carrier leakage detection circuits. An internal transmit to receive loopback mode allows for receiver I/Q imbalance calibration. The local oscillator I/Q quadrature phase error can be digitally corrected in approximately 0.125° steps. Only an RF bandpass filter (BPF), crystal, RF switch, PA, and a small number of passive components are needed to form a complete wireless broadband RF radio solution.

The MAX2839 completely eliminates the need for an external SAW filter by implementing on-chip programmable monolithic filters for both the receiver and transmitter, for all 2GHz and 802.16e profiles and WIBRO. The baseband filters along with the Rx and Tx signal paths are optimized to meet the stringent noise figure and linearity specifications. The device supports up to 2048 FFT OFDM and implements programmable channel filters for 3.5MHz to 20MHz RF channel bandwidths. The transceiver requires only 2µs Tx-Rx switching time. The IC is available in a small 56-pin TQFN package measuring 8mm x 8mm x 0.8mm.

## Applications

802.16e Mobile WiMAX™ Systems  
 Korean WIBRO Systems  
 Proprietary Wireless Broadband Systems  
 802.11g or n WLAN with MRC or MIMO Down Link

WiMAX is a trademark of the WiMAX Forum.

SPI is a trademark of Motorola, Inc.

## Features

- ◆ 2.3GHz to 2.7GHz Wideband Operation
- ◆ Dual Receivers for MIMO, Single Transmitter
- ◆ Complete RF Transceiver, PA Driver, and Crystal Oscillator
  - 2.3dB Rx Noise Figure on Each Receiver
  - 35dB Rx EVM for 64QAM Signal
  - 0dBm Linear OFDM Transmit Power (64QAM)
  - 70dBm Tx Spectral Emission Mask
  - 35dBc LO Leakage
  - Automatic Rx DC Offset Correction
  - Monolithic Low-Noise VCO with -39dBc Integrated Phase Noise
  - Programmable Rx I/Q Lowpass Channel Filters
  - Programmable Tx I/Q Lowpass Anti-Aliasing Filters
  - Sigma-Delta Fractional-N PLL with < 40Hz Step
  - 62dB Tx Gain Control Range with 1dB Step Size, Digitally Controlled
  - 95dB Rx Gain Control Range with 1dB Step Size, Digitally Controlled
  - 60dB Analog RSSI Instantaneous Dynamic Range
  - 4-Wire SPI™ Digital Interface
  - I/Q Analog Baseband Interface
  - Digital Tx/Rx Mode Control
  - Digitally Tuned Crystal Oscillator
  - On-Chip Digital Temperature Sensor Readout
- ◆ +2.7V to +3.6V Transceiver Supply
- ◆ Low-Power Shutdown Current
- ◆ Small, 56-Pin TQFN Package (8mm x 8mm x 0.8mm)

## Ordering Information

PART	TEMP RANGE	PIN-PACKAGE	PKG CODE
MAX2839ETN+TD	-40°C to +85°C	56 TQFN-EP*	T5688+2

+ Denotes a lead-free package.

T = Tape and reel.

\*EP = Exposed paddle.

D = Dry pack.

Pin Configuration and Block Diagram/Typical Operating Circuit appear at end of data sheet.

# 2.3GHz to 2.7GHz MIMO Wireless Broadband RF Transceiver

## ABSOLUTE MAXIMUM RATINGS

VCC\_ Pins to GND.....-0.3V to +3.6V  
 RF Inputs: RXINA+, RXINA-, RXINB+,  
 RXINB- to GND .....AC-Coupled Only  
 RF Outputs: TXOUT+, TXOUT- to GND.....-0.3V to +3.6V  
 Analog Inputs: TXBBI+, TXBBI-, TXBBQ+,  
 TXBBQ- to GND.....-0.3V to +3.6V  
 Analog Input: REFCLK, XTAL1 .....-0.3V to +3.6V<sub>P-P</sub>  
 Analog Outputs: RXBBIA+, RXBBIA-, RXBBQA+, RXBBQA-,  
 RXBBIB+, RXBBIB-, RXBBQB+, RXBBQB-, CPOUT+,  
 CPOUT-, PABIAS, RSSI to GND.....-0.3V to +3.6V  
 Digital Inputs: RXTX,  $\overline{CS}$ , SCLK, DIN,  
 B0-B7, LOAD, RXHP, ENABLE to GND .....-0.3V to +3.6V

Digital Outputs: DOUT, CLKOUT .....-0.3V to +3.6V  
 Bias Voltages: VCOBYP .....-0.3V to +3.6V  
 Short-Circuit Duration on All Output Pins .....10s  
 RF Input Power: All RXIN\_ .....+15dBm  
 RF Output Differential Load VSWR: All TXOUT .....6:1  
 Continuous Power Dissipation (T<sub>A</sub> = +70°C)  
 56-Pin TQFN (derate 31.3mW/°C above +70°C) .....2500mW  
 Operating Temperature Range .....-40°C to +85°C  
 Junction Temperature .....+150°C  
 Storage Temperature Range .....-65°C to +160°C  
 Lead Temperature (soldering, 10s) .....+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## DC ELECTRICAL CHARACTERISTICS TABLE

(MAX2839 Evaluation Kit, VCC\_ = 2.7V to 3.6V, T<sub>A</sub> = -40°C to +85°C, Rx set to the maximum gain. RXTX set according to operating mode, ENABLE =  $\overline{CS}$  = high, SCLK = DIN = low, no input signal at RF inputs, all RF inputs and outputs terminated into 50Ω. 90mV<sub>RMS</sub> differential I and Q signals (1MHz) applied to I, Q baseband inputs of transmitter in transmit mode, all registers set to recommended settings and corresponding test mode, unless otherwise noted. Typical values are at VCC\_ = 2.8V, f<sub>LO</sub> = 2.5GHz and T<sub>A</sub> = +25°C, unless otherwise noted.) (Note 1)

**Note 1:** Min/max limits are production tested at  $T_A = +85^{\circ}C$ . Min/max limits at  $T_A = -40^{\circ}C$  and  $T_A = +25^{\circ}C$  are guaranteed by design and characterization. The power-on register settings are not production tested. Load register setting 500ns after  $V_{CC}$  is applied.

**Note 2:** Two tones at +20MHz and +39MHz offset with -35dBm/tone. Measure IM3 at 1MHz.

**Note 3:** Gain adjusted over max gain and max gain -3dB. Optimally matched over given 200MHz band.

**Note 4:** Tx mode supply current is specified for 64 QAM while achieving the Tx output spectrum mask shown in the *Typical Operating Characteristics*. The supply current can be reduced for 16 QAM signal by adjusting the Tx bias settings through the SPI.

## 2.3GHz to 2.7GHz MIMO Wireless Broadband RF Transceiver

### Pin Description

PIN	NAME	FUNCTION
1	GNDRXLNA_A	Receiver A LNA Ground
2	VCCRXLNA_A	Receiver A LNA Supply Voltage. Bypass with a 22pF capacitor as close as possible to the pin.
3	B0	Receiver Gain-Control Logic Input Bit 0
4	LOAD	Receiver Gain Select. Positive edge trigger latches digital gain inputs B0–B7 to receive A. Negative edge trigger latches digital gain inputs B0–B7 to receive B.
5	VCCRXLNA_B	Receiver B LNA Supply Voltage. Bypass with a 22pF capacitor as close as possible to the pin.
6	GNDRXLNA_B	Receiver B LNA Ground
7	RXINB+	Receiver B LNA Differential Input. Input is internally DC-coupled.
8	RXINB-	
9	B4	Receiver and Transmitter Gain-Control Logic Input Bit 4
10	B3	Receiver and Transmitter Gain-Control Logic Input Bit 3
11	VCCTXPAD	Supply Voltage for Transmitter PA Driver. Bypass with a 22pF capacitor as close as possible to the pin.
12	B2	Receiver and Transmitter Gain-Control Logic Input Bit 2
13	TXOUT+	Power Amplifier Driver Differential Output. The pins have internal AC blocking capacitors.
14	TXOUT-	
15	B1	Receiver and Transmitter Gain-Control Logic Input Bit 1
16	B5	Receiver and Transmitter Gain-Control Logic Input Bit 5
17	PABIAS	Transmit External PA Bias DAC Output
18	VCCTXMX	Transmitter Upconverter Supply Voltage. Bypass with a 22pF capacitor as close as possible to the pin.
19	SCLK	Serial-Clock Logic Input of 4-Wire Serial Interface
20	ENABLE	Transceiver Enable
21	CLKOUT	Reference Clock Buffer Output
22	REFCLK	Crystal or Reference Clock Input. AC-couple a crystal or a reference clock to this analog input.
23	XTAL1	XTAL Input. Connect the other terminal of the XTAL to this pin.
24	VCCXTAL	Crystal Oscillator Supply Voltage. Bypass with a 100nF capacitor as close as possible to the pin.
25	VCCCP	PLL Charge-Pump Supply Voltage. Bypass with a 100nF capacitor as close as possible to the pin.
26	GNDCP	Charge-Pump Circuit Ground
27	CPOUT+	Differential Charge-Pump Output. Connect the frequency synthesizer's loop filter between these pins (see the <i>Typical Operating Circuit</i> ).
28	CPOUT-	
29	GNDVCO	VCO Ground
30	VCOBYP	On-Chip VCO Regulator Output Bypass. Bypass with a 1μF capacitor to GND. Do not connect other circuitry to this pin.
31	VCCVCO	VCO Supply Voltage. Bypass with a 22nF capacitor as close as possible to the pin.
32	$\overline{CS}$	Chip-Select Logic Input of 4-Wire Serial Interface
33	DOUT	Data Logic Output of 4-Wire Serial Interface
34	DIN	Data Logic Input of 4-Wire Serial Interface
35	RXBBIB-	Receiver B Baseband I-Channel Differential Outputs
36	RXBBIB+	
37	RXBBQB-	Receiver B Baseband Q-Channel Differential Outputs
38	RXBBQB+	

# 2.3GHz to 2.7GHz MIMO Wireless Broadband RF Transceiver

## Pin Description (continued)

**MAX2839**

PIN	NAME	FUNCTION
39	RSSI	Receiver Signal Strength Output
40	B7	Receiver Gain-Control Logic Input Bit 7
41	B6	Receiver and Transmitter Gain-Control Logic Input Bit 6
42	RXHP	Receiver Baseband AC-Coupling Highpass Corner Frequency Control Logic Input. For typical WiMAX application, connect pin to ground.
43	RXBBQA-	Receiver Baseband Q-Channel Differential Outputs
44	RXBBQA+	
45	RXBBIA-	Receiver A Baseband I-Channel Differential Outputs
46	RXBBIA+	
47	VCCR XVGA	Receiver VGA Supply Voltage. Bypass with a 100nF capacitor as close as possible to the pin.
48	VCCR XFL	Receiver Baseband Filter Supply Voltage. Bypass with a 100nF capacitor as close as possible to the pin.
49	TXBBI-	Transmitter Baseband I-Channel Differential Inputs
50	TXBBI+	
51	TXBBQ+	Transmitter Baseband Q-Channel Differential Inputs
52	TXBBQ-	
53	VCCR XMX	Receiver Downconverters Supply Voltage. Bypass with a 22pF capacitor as close as possible to the pin.
54	RXTX	Receive/Transmit Mode Enable
55	RXINA-	Receiver A LNA Differential Input. Input is internally DC-coupled.
56	RXINA+	
—	EP	Exposed Paddle. Internally connected to GND. Connect to a large ground plane for optimum RF performance and enhanced thermal dissipation. Not intended as an electrical connection point.

### Detailed Description

#### Modes of Operation

The modes of operation for the MAX2839 are shutdown, clock-out only, standby, receive, transmit, transmitter calibration and receiver calibration. See Table 1 for a summary of the modes of operation. When the parts are active, various blocks can be shutdown individually by programming different SPI registers.

#### Shutdown Mode

The MAX2839 features a low-power shutdown mode. In shutdown mode, all circuit blocks are powered down, except the 4-wire serial bus and its internal programmable registers.

#### Clock-Out Only

In clock-out mode, the entire transceiver is off except the divided reference clock output on the CLKOUT pin and the clock divider, which remains on.

#### Standby Mode

The standby mode is used to enable the frequency synthesizer block while the rest of the device is powered down. In this mode, PLL, VCO, and LO generator

are on so that Tx or Rx modes can be quickly enabled from this mode. These and other blocks can be selectively enabled in this mode by programming different SPI registers.

#### Receive (Rx) Mode

In receive mode, all Rx circuit blocks are powered on and active. Antenna signal is applied; RF is downconverted, filtered, and buffered at Rx BB I and Q outputs. Either receiver A or both receivers can be enabled. Receiver B cannot be enabled by itself.

#### Transmit (Tx) Mode

In transmit mode, all Tx circuit blocks are powered on. The external PA is powered on after a programmable delay using the on-chip PA bias DAC.

#### Transmitter (Tx) Calibration Mode

All Tx circuit blocks except PA driver and external PA are powered on and active. The AM detector and receiver I/Q channel buffers are also ON, along with multiplexers in receiver side to route this AM detector's signal to each I and Q differential outputs.

# 2.3GHz to 2.7GHz MIMO Wireless Broadband RF Transceiver

MAX2839

## Receiver (Rx) Calibration or Loopback

Part of Rx and Tx circuit blocks except LNA and PA driver are powered on and active. The transmitter I/Q input signals are upconverted to RF, and the output of the Tx gain control block (VGA) is fed to the receiver at the input of the downconverter. Either receiver A or both receivers can be connected to the transmitter and powered on. The I/Q lowpass filters are not present in the transmitter signal path (they are bypassed).

## Programmable Registers and 4-Wire SPI Interface

The MAX2839 includes 32 programmable 16-bit registers. The most significant bit (MSB) is the read/write selection bit. The next 5 bits are register address. The

10 least significant bits (LSBs) are register data. Register data is loaded through the 4-wire SPI/MICROWIRE™-compatible serial interface. Data at DIN is shifted in MSB first and is framed by  $\overline{CS}$ . When  $\overline{CS}$  is low, the clock is active, and input data is shifted at the rising edge of the clock. During the read mode, register data selected by address bits is shifted out to DOUT at the falling edges of the clock. At the  $\overline{CS}$  rising edge, the 10-bit data bits are latched into the register selected by address bits. See Figure 1. The register values are preserved in shutdown mode as long as the power-supply voltage is maintained. However, every time the power-supply voltage is turned on, the registers are reset to the default values.

**NOTES:**

- DIE THICKNESS ALLOWABLE IS 0.225mm MAXIMUM (0.009 INCHES MAXIMUM).
- DIMENSIONING & TOLERANCES CONFORM TO ASME Y14.5M, - 1994.
- N IS THE NUMBER OF TERMINALS.  
Nd IS THE NUMBER OF TERMINALS IN X-DIRECTION &  
Ne IS THE NUMBER OF TERMINALS IN Y-DIRECTION.
- DIMENSION b APPLIES TO PLATED TERMINAL AND IS MEASURED BETWEEN 0.20 AND 0.25mm FROM TERMINAL TIP.
- THE PIN #1 IDENTIFIER MUST BE LOCATED ON THE TOP SURFACE OF THE PACKAGE WITHIN HATCHED AREA AS SHOWN. EITHER AN INDENTATION MARK OR INK/LASER MARK IS ACCEPTABLE.
- ALL DIMENSIONS ARE IN MILLIMETERS.
- PACKAGE WARPAGE MAX 0.01mm.
- APPLIES TO EXPOSED PAD AND TERMINALS. EXCLUDES INTERNAL DIMENSION OF EXPOSED PAD.
- MEETS JEDEC MO220.
- MARKING IS FOR PACKAGE ORIENTATION REFERENCE ONLY.
- NUMBER OF LEADS ARE FOR REFERENCE ONLY.
- ALL DIMENSIONS APPLY TO BOTH LEADED AND PbFREE PARTS.
