SPECIFICATIONS

Ac Input 85-264 Vac, 47-63 Hz single phase.	EMI/EMC Compliance All models include built-in EMI filtering to meet the EMC requirements below.	
Input Current Maximum input current 2.3 A at 90 Vac, 60 Hz with full rated load. Input current harmonic content meets the requirements of IEC1000-3-2.	EMI SPECIFICATIONS	
Hold-up Time 25 ms minimum from loss of ac input at full load, nominal line (115 Vac).	COMPLIANCE LEVEL	
Output Power 110 W fan cooled, 75 W convection. Peak ratings are for 60 s maximum duration, 10% duty cycle.	Conducted Emissions	EN55022 Class B; FCC Class B
Total Regulation Total regulation is the maximum deviation from the nominal voltage for all steady-state loading conditions.	Static Discharge	EN61000-4-2, 6 kV contact, 8 kV air
Overload Protection Fully protected against short circuit and output overload. Short circuit protection is cycling type power limit. Recovery after fault is automatic.	RF Field Susceptibility	EN61000-4-3, 3 V/meter
Output Noise 0.5% rms, 1% pk-pk, 20 MHz Bandwidth, differential mode. Measured with noise probe directly across output terminals of the power supply.	Fast Transients/Bursts	EN61000-4-4, 2 kV, 5 kHz
Transient Response 500 μ s typical response time for return to within 0.5% of final value for a 50% load step change, $\Delta i/\Delta t < 0.2$ A/ μ s. Maximum voltage deviation is 3.5%. Load must not go below stated minimum.	Surge Susceptibility	EN61000-4-5, 1 kV diff., 2 kV com.
Remote Sense Provided as a standard feature. Capable of compensating for 0.25 V total of cabling losses in voltage. Open sense lead protection.	Line Frequency Harmonics	EN61000-3-2 Class A
Overvoltage Protection OVP crowbar reduces output voltage below nominal rating in less than 50 ms.	Inrush Current Inrush 240 Vac is less than 37 A, averaged over the first ac half-cycle under cold start conditions. Limiting provided by internal thermistors.	
Voltage Adjustment: Main output $\pm 5\%$.	Fan Output An additional output, same as V_{out} , suitable for powering a dc fan is included in all models. The output is protected by an internal resistor in the event of an overload.	
Input Protection Internal ac fuse provided on all models. Fuse does not blow on overload or short circuit—fuse blows only if catastrophic failure occurs in the unit.	Power Fail TTL or CMOS compatible output goes low (< 0.5 V) 8 ms before output voltage drops more than 4% below nominal voltage upon loss of ac power. The signal is factory set to trip when input power can no longer sustain the output.	
	Temperature Coefficient 0.03%/ $^{\circ}$ C typical on all outputs.	
	Environmental Designed for 0 to 50 $^{\circ}$ C operation at full rated output power; derate output current and total output power by 2.5% per $^{\circ}$ C above 50 $^{\circ}$ C. See Environmental and Packaging Specifications on the next page.	
	Commercial Safety Approvals All models are approved to UL1950, CSA22.2 No. 950-95, IEC950, EN60950. CB certificate available. Exceeds FCC and CISPR22 Class B conducted emissions requirement	

All specifications are typical at nominal input, full load at 25 $^{\circ}$ C unless otherwise stated
