

**DESCRIPTION**

The LX5250/52 is a multimode SCSI terminator that is compatible with the SCSI SPI-2 (Ultra2 SCSI), SCSI SPI-3 (Ultra3 SCSI or Ultra160 SCSI), and SCSI SPI-4 (Ultra320) specifications developed by the T10 standards committee for low voltage differential (LVD) termination, while providing backwards compatibility to the SCSI, SCSI-2, and SPI single-ended specifications. Multimode compatibility permits the use of legacy devices on the bus without hardware alterations. Automatic mode selection is achieved through voltage detection on the Diffsense line.

The LX5250/52 utilizes an industry standard LVD architecture. The individual high bandwidth drivers maximize channel separation, reduce channel-to-channel noise and cross talk to insure Ultra320 performance.

When the LX5250/52 is enabled, the differential sense (DIFFSENSE) pin supplies a voltage between 1.2V and

1.4V. In application this pin is tied to the DIFFSENSE input of the corresponding LVD transceivers. This action enables the LVD transceiver function. DIFFSENSE is capable of supplying a maximum of 10mA.

Tying the DIFFSENSE pin high places the LX5250/52 in a HI Z state indicating the presence of an HVD device. Tying the pin low places the part in a single-ended mode while also signaling the multimode transceiver to operate in a single-ended mode.

Recognizing the needs of portable and configurable peripherals, the LX5250/52 has a TTL compatible sleep/disable mode. During this sleep/disable mode, power dissipation is reduced to a meager 15uA while also placing all outputs in a HI Z state. Also during sleep/disable mode, the DIFFSENSE function is disabled and is placed in a HI Z state.

The LX5250/52 also provides a master / slave function. Driving this pin high or floating the pin enables the 1.3V DIFFSENSE reference. Driving the pin low disables the on board DIFFSENSE reference and enables use of an external master reference device.

**KEY FEATURES**

- Compliant with SCSI SPI-2 (Ultra2), SPI-3 (Ultra160), and SPI-4 (Ultra320)
- Auto-Selectable LVD or Single-Ended Termination
- Fast Response, No Output Capacitors Required
- Compatible with Active Negation Drivers
- 15µA Supply Current in Disconnect Mode
- Logic Command Disconnects All Termination Lines
- Diffsense Line Driver
- Ground Driver Integrated for Single-Ended Operation
- Current Limit and Thermal Protection
- Hot-Swap Compatible (Single-Ended)
- Available in 36-pin QSOP and 28-pin TSSOP package
- LX5250, 36-pin QSOP: Pin Compatible With DS2118, UCC5630A and UCC5672
- LX5250 28-pin TSSOP: Pin Compatible with DS2119, and UCC5672

**IMPORTANT:** For the most current data, consult MICROSEMI's website: <http://www.microsemi.com>

**PRODUCT HIGHLIGHT**

**PACKAGE ORDER INFO**

T <sub>A</sub> (°C)	<b>DB</b> QSOP 36-Pin	<b>PW</b> TSSOP 28-Pin
		RoHS Compliant / Pb-free Transition DC: 0535
0 to 70	<b>LX5250CDB</b> <b>LX5252CDB</b>	<b>LX5250CPW</b> -

Note: Available in Tape & Reel.  
Append the letters "TR" to the part number. (i.e. LX5250CDB-TR)

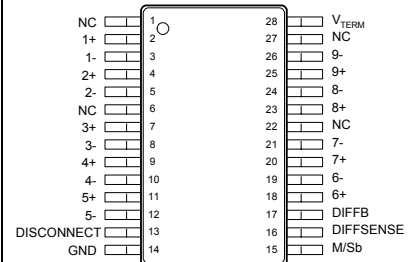

**ABSOLUTE MAXIMUM RATINGS**

Term Power ( $V_{TERM}$ ) .....	-0.3V to 7V
Operating Junction Temperature .....	150°C
Storage Temperature Range .....	-65°C to 150°C
RoHS / Pb-free Peak Package Solder Reflow Temperature (40 second maximum exposure) .....	260°C (+0, -5)

Note: Exceeding these ratings could cause damage to the device. All voltages are with respect to Ground. Currents are positive into, negative out of specified terminal.

**THERMAL DATA**
**DB 36 Pin QSOP**

THERMAL RESISTANCE-JUNCTION TO AMBIENT,  $\theta_{JA}$       **53.9°C/W**

**PW 28 Pin TSSOP**

THERMAL RESISTANCE-JUNCTION TO AMBIENT,  $\theta_{JA}$       **100°C/W**

Junction Temperature Calculation:  $T_J = T_A + (P_D \times \theta_{JA})$ .

The  $\theta_{JA}$  numbers are guidelines for the thermal performance of the device/pc-board system. All of the above assume no ambient airflow.  $\theta_{JA}$  can vary significantly depending on mounting technique. (See Application Notes Section: Thermal considerations)

**MASTER/SLAVE FUNCTION TABLE**

Master/Slave	DIFFSENSE Status	
	HI Z	0mA
L*	HI Z	0mA
H	1.3V	10mA Source
Open (Pull-Up)	1.3V	10mA Source

\* When in Low state, terminator will sense state of DIFFSENSE line.

**DIFFSENSE/POWER UP/POWER DOWN FUNCTION TABLE**

LX5250 DISCONNECT	LX5252 DISCONNECT	DIFFSENSE	Outputs		Quiescent Current
			Status	Type	
L	H	< 0.5V	Enable	SE	55mA
L	H	0.7V – 1.9V	Enable	LVD	35mA
L	H	> 2.4V	Disable	HI-Z	8mA
H or Open	L or Open	X	Disable	HI-Z	10µA

**RECOMMENDED MAX OPERATING CONDITIONS**

	$I_{\text{IH(MS)}}$	Master/Slave = 2.4V		100		nA

Note 1: Guaranteed by design.

**BLOCK DIAGRAM**

Figure 1 – LX5250/52 Block Diagram; 36-pin version shown

**FUNCTIONAL PIN DESCRIPTION**

PIN NAME	DESCRIPTION
1-, 2-, 3-, 4-, 5-, 6-, 7-, 8-, 9-	Negative signal termination lines for LVD mode. Signal termination lines for SE mode.
1+, 2+, 3+, 4+, 5+, 6+, 7+, 8+, 9+	Positive signal termination lines for LVD mode. Psuedo-ground lines for SE mode.
V <sub>TERM</sub>	Power supply pin for terminator. Connect to SCSI bus VTERM. Must be decoupled by one 4.7 $\mu$ F low-ESR capacitor for every three terminator devices. It is absolutely necessary to connect this pin to the decoupling capacitor through a very low impedance (big traces to PCB). Keeping distances very short from the decoupling capacitors is somewhat layout dependent and some applications may benefit from high frequency decoupling with 0.1 $\mu$ F capacitors at V <sub>TERM</sub> pin.
DISCONNECT	Enables/Disables terminator. See Power Down Function Table for logic levels for LX5250 and LX5252.
GND	Terminator ground pin. Connect to ground.
MASTER/SLAVE	Sometimes referred to as M/S pin in this datasheet. Used to select which terminator is the controlling device. M/S pin High or Open enables the DIFFSENSE output drive. Please see MASTER/SLAVE Function Table.
DIFFSENSE	This is a dual function pin. It drives the SCSI bus DIFFSENS line. It is also the sense pin to detect the SCSI bus mode (LVD, SE, or HVD). DIFFSENSE output drive can be disabled with low level on the M/S pin. Please see DIFFSENSE and MASTER/SLAVE Function Tables. Internally connected to DIFFB pin through a 20K $\Omega$ resistor.
DIFFB	Internally connected to DIFFSENSE pin through a 20K $\Omega$ resistor. It can be used as a mode sense pin when the device is non-controlling terminator (M/S is low). An RC filter (50K $\Omega$ resistor & 4.7 $\mu$ F) is not required on the LX5250 as it has an internal timer.
SE	Single-Ended output; when High, terminator is operating in SE mode.
LVD	Low Voltage Differential output; when High, terminator is operating in LVD mode.
HVD	High Voltage Differential output; when High, terminator is operating in HVD mode.
HEATSINK	Attached to die mounting pad, but not bonded to GND pin. Pins should be considered a heat sink only, and not a true ground connection. It is recommended that these pins be connected to ground, but can be left floating.

**APPLICATION SCHEMATIC**

\*The capacitor on pin 1 can be placed on the LX5250CDB, LX5250CPW, or LX5252CDB to be pin-compatible with other devices, but is not required.
