

FEATURES

Interfaces, amplifies, filters, isolates, & linearizes analog input voltages from a J, K, T, E, R, S or B-type thermocouple
 Thermocouple input signal is internally linearized
 High accuracy internal cold junction compensation.
 Module provides ± 1500 V peak of galvanic transformer-based isolation with a common mode rejection (CMR) of 160 dB @ 50/60 Hz and a normal mode rejection (NMR) of 60 dB @ 50/60 Hz.
 All 3B47 series modules are mix-and-match and Hot Swappable.

APPLICATIONS

Industrial signal conditioning
 Industrial signal isolation
 Industrial signal filtering

PRODUCT OVERVIEW

The 3B Series of Signal Conditioning I/o Subsystems provide a low-cost, versatile method of transferring analog transducer signals to a data acquisition, monitoring or control system without the inherent noise, non-linearity, drift and extraneous voltages. The modules are designed to directly accept analog signals from Thermocouples, RTD's, AC and DC Strain Gages, Torque Transducers, Frequency Transducers, LVDTs, millivolt or process current signals. The modules amplify, isolate, linearize and convert the transducer output signals to standardized analog inputs for high-level analog I/O subsystems. The 3B Series Subsystem consists of a 10" relay rack with universal mounting backplane and a family of plug-in (up to 16 per rack) input and output signal conditioning modules.

Eight and four channel backplanes are also available. Each backplane incorporates screw terminals for sensor inputs and current outputs and a 26-pin connector for high-level single-ended voltage outputs to the user's equipment.

The input modules feature complete signal conditioning circuitry optimized for specific sensors or analog signals and provide two simultaneous high-level analog outputs: 0 to +10V (or ± 10 V) and 4-20 mA (or 0-20 mA).

FUNCTIONAL BLOCK DIAGRAM

Figure 1. 3B47 Functional Block Diagram

Output modules accept 0 to +10V (or ± 10 V) single-ended signals and provide an isolated 4-20 mA (or 0-20 mA) process signal. All modules feature a universal pin-out and may be readily hot-swapped under full power and interchanged without disrupting field wiring.

The Analog Devices 3B Series Signal Conditioning Subsystem is designed to easily handle signal conditioning problems in measurement and control applications. Some typical uses are in microcomputer-based data acquisition systems, programmable controllers, analog recorders, dedicated control systems, and any other applications where monitoring of temperature, pressure, flow and analog signals are required. Since each input module features two simultaneous outputs, the voltage output can be used to provide an input to a microprocessor-based data acquisition or control system while the current output can be used for analog transmission, operator interface, or an analog backup system.

Each input module is a single-channel signal conditioner which plugs into a socket on the backplane and accepts its signal from the input screw terminals. All input modules provide input protection, amplification and filtering of the input signal, accuracy of $\pm 0.1\%$, low drift of ± 1 uV/°C (low-level input modules), and feature two high-level analog outputs that are compatible with most process instrumentation. The isolated input modules also provide ± 1500 V peak isolation.

The choice of a specific 3B module depends upon the type of input signal. Input modules are available to accept millivolt, volt, process current, thermocouple, RTD, AC and DC strain gage, frequency and LVDT inputs. The voltage output of each module is available from the system I/O connector while the current output is available on the output screw terminals.

GENERAL DESCRIPTION

The 3B47 is a single-channel isolated thermocouple signal-conditioning module which interfaces, amplifies, isolates, protects, linearizes and filters analog input voltages from a J, K, T, E, R, S or B-type thermocouple. The thermocouple input signal is internally linearized to provide an output voltage which is linear with temperature, High accuracy internal cold junction compensation and a predictable upscale open circuit indication provide a complete signal conditioning solution. To accurately measure low level signals in electrically noisy environments, +1500 V peak of galvanic transformer-based isolation with a common mode rejection (CMR) of 160 dB @ 50/60 Hz and a normal mode rejection (NMR) of 60 dB @ 50/60 Hz are provided. This plug-in, mix-and-match, hot-swappable module is easily field calibrated via front-panel zero and span adjustments.

A chopper-stabilized low-drift input amplifier assures stable long-term stability. At the amplifier input, a zero-scale input voltage is subtracted from the input signal to set the zero-scale value. For user convenience, the zero and span optionally can be factory configured to meet custom needs (Model 3B37-

CUSTOM). Zero suppression can exceed 100% of the input range. This enables suppression of a zero-scale input value many times larger than the total span for precise expanded-scale measurements of a selection portion of an input signal. The differential input circuit on the field side is fully floating, eliminating the need for any input grounding. Signal isolation by transformer coupling uses a proprietary modulation technique for linear, stable and reliable performance. A demodulator on the computer side of the signal transformer recovers the original signal which is then filtered and buffered to provide a low-noise, low-impedance output voltage.

Internal cold-junction compensation largely corrects errors arising from parasitic thermocouples formed by thermocouple connection to the input screw terminals, providing an accuracy of $\pm 0.5^{\circ}\text{C}$ over the $+5^{\circ}\text{C}$ to $+45^{\circ}\text{C}$ ambient temperature range. The module generates a predictable upscale signal to indicate an open thermocouple; for a downscale response, connect a 47 M Ω , 0.25 Watt resistor across screw terminals 2 and 4 on the 3B Series backplane.

3B47 Models Available

Model	Input Type	Input Range	Output Range	Accuracy ¹
3B47-J-01	Type J	0°C to +760°C (32°F to +1400°F)	0 V to +10 V	0.76°C
3B47-J-02	Type J	-100°C to +300°C (-148°F to +572°F)	0 V to +10 V	0.4°C
3B47-J-03	Type J	0°C to +500°C (+32°F to +932°F)	0 V to +10 V	0.36°C
3B47-K-04	Type K	0°C to +1000°C (+32°F to +1832°F)	0 V to +10 V	1.0°C
3B47-K-05	Type K	0°C to +500°C (+32°F to +932°F)	0 V to +10 V	0.38°C
3B47-T-06	Type T	-100°C to +400°C (-148°F to +752°F)	0 V to +10 V	1.1°C
3B47-T-07	Type T	0°C to +200°C (+32°F to +392°F)	0 V to +10 V	0.3°C
3B47-E-08	Type E	0°C to +1000°C (+32°F to +1832°F)	0 V to +10 V	1.5°C
3B47-R-09	Type R	+500°C to +1750°C (+932°F to +3182°F)	0 V to +10 V	1.6°C
3B47-S-10	Type S	+500°C to +1750°C (+932°F to +3182°F)	0 V to +10 V	1.5°C
3B47-B-11	Type B	+500°C to +1800°C (+932°F to +3272°F)	0 V to +10 V	3.3°C
3B47-Custom	Type J, K, T, E, R, S, or B	*	*	*

¹The CJC sensor accuracy (refer to specification table) should be added to the module accuracy when computing system accuracy.

* Custom Input/Output ranges are available. Refer to configuration guide.

3B47 Specifications

(typical @ +25°C and ±15 V dc, and +24 V dc Power)

Description	Model 3B47
	Input Ranges
Thermocouple Types	J, K, T, E, R, S, B
Standard Ranges	Refer to Model Table
Custom Ranges	±5 mV to ±500 mV
	Output Range¹
Voltage ($R_L > 2 \text{ K}\Omega$)	0 V to +10 V
Accuracy ²	
Initial @ +25°C	See Model Table
	Stability vs. Temperature
Voltage Output	
Zero	±0.02°C/°C
Span	±25 ppm of Reading/°C
Zero and Span Adjustment Range³	±5% of Span
Cold Junction Compensation (CJC) ⁴	
Initial Accuracy @ +25°C	±0.5 °C
Accuracy vs. Temperature, +5°C to +45°C	±0.5°C (±0.0125°C/°C)
Input Bias Current	+15 nA
Input Resistance	15 MΩ
	Noise
Input, 0.1 Hz to 10 Hz Bandwidth	0.2 μV rms

Output, 100 kHz Bandwidth	100 μ V rms
Bandwidth, -3 dB	3 Hz
Output Rise Time, 10% to 90% Span	200 ms
Open Input Response	Upscale
Open Input Detection Time	10 seconds
Common-Mode Voltage (CMV)	
Input-to-Output, Continuous	\pm 1500 V peak, maximum
Transient	ANSI/IEEE C37.90.1-1989

Common Mode Rejection (CMR)

1 k Ω Source Imbalance, 50/60 Hz 160 dB

Normal Mode Rejection, 50/60 Hz 60 dB

Input Protection

Continuous 220 V rms maximum

Transient ANSI/IEEE C37.90.1-1989

Voltage Output Protection Continuous Short to Ground

Current Output Protection 130 V rms, continuous

Power Supply Voltages

Rated Operation \pm (11.5 V dc to 16.5 V dc)

Current +16 mA, -14 mA

Sensitivity \pm 0.01% span/V

Mechanical Dimensions 3.15" x 3.395" x 0.775"
(80.0 mm x 86.2 mm x 19.7 mm)

Environmental

Temperature Range

Rated Performance -25°C to +85°C

Storage -55°C to +85°C

Relative Humidity 0 to 95% @ +60°C non-condensing

RFI Susceptibility \pm 0.5% Span error @ 400 MHz, 5 Watt, 3 ft

¹ Current output is not available with model 3B47.

² Includes the combined effects of repeatability, hysteresis, and nonlinearity.

³ A wide range of zero suppression and span adjustment is available to enable field calibration.

⁴ When used with the CJC temperature sensor provided on the 3B Series backplane. *Specifications subject to change without notice.*

PIN CONFIGURATIONS AND FUNCTIONAL DESCRIPTIONS

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Electrostatic charges as high as 4000 V readily accumulate on the human body and test equipment and can discharge without detection. Although this product features proprietary ESD protection circuitry, permanent damage may occur on devices subjected to high energy electrostatic discharges. Therefore, proper ESD precautions are recommended to avoid performance degradation or loss of functionality.
