SanDisk® Waterproof USB Flash Drive

The small, rugged and waterproof* solution for emerging portable flash data storage applications.

As the need for storing, transporting and accessing critical medical records and other personal information continues to grow, SanDisk now offers a super-small, extremely hardy, waterproof USB flash drive to meet the increasing demands of the military, healthcare, emergency rescue and response, and other markets that need rugged, wearable storage.

The newest addition to the growing line of Hi-Speed USB 2.0 flash drives from SanDisk is small and stylish enough to be carried daily on a key chain or worn on a necklace, yet rugged and durable enough to withstand the harshest, most severe working environments of everyday life.

The SanDisk USB Flash Drive contains several safeguards against loss or damage. It is put through a special, low pressure overmolding process that seals the electronic components inside, making it waterproof. The SanDisk USB Flash Drive also features a specially designed, clear plastic cap that is always attached to the lanyard, assuring that the cap and lanyard remain securely fastened. Additionally, the cap features a unique latching mechanism that securely holds the USB drive in place and prevents accidental loss.

This USB Flash Drive is ideal for a wide range of emerging applications where small size, high durability, and ease of use are critical, including:

- Military: for storing soldiers' personal medical records and other personal information in the field, so that it can be easily read and written to in the field by ruggedized notebooks or PDAs equipped with a USB to PC Card adapter

- Healthcare: for storing personal health records so that it is readily available during an emergency

- Emergency Rescue & Response: for storing medical records for emergency rescue personnel (firefighters, police, paramedics, etc.)

SanDisk Waterproof USB Flash Drive Preliminary Specifications**

Interface	Hi-Speed USB 2.0 (backwards compatible with all USB 1.1 ports) USB Mass Storage Class Device; Certified Windows XP and Mac OS X
Performance Interface transfer speed (max)	Write: TBD Read: TBD
Power Requirements DC Input Voltage	4.6V to 5.4V
