| <p>1. System Clock Signals SCK and <math>\overline{\text{SCK}}</math> switch at one half the DRAM CK/<math>\overline{\text{CK}}</math> frequency.</p> <p>2. TESTLO_AB20 and TESTLO_AC20 should be configured for debug purposes on prototype DIMMs: each pin should have a zero ohm resistor pulldown to ground, and an unpopulated resistor pullup to VCC. These resistors can be replaced on production DIMMs with a direct connection to ground.</p> |  |            |
