

SDP8004/8014

Optoschmitt Detector Totem-Pole Output

FEATURES

- Side-looking plastic package
- 55° (nominal) acceptance angle
- TTL/LSTTL/CMOS compatible
- Totem-pole output
- Buffer (SDP8004) or inverting (SDP8014) logic available
- High noise immunity output
- Mechanically and spectrally matched to SEP8506 and SEP8706 infrared emitting diodes

DESCRIPTION

The SDP8004/8014 series consists of a high speed IC molded in a side-looking black plastic package to minimize the effect of visible ambient light. The detector incorporates a Schmitt trigger which provides pulse shaping and hysteresis for noise immunity. The totem-pole output is well-suited for applications which require fast transition times. The output can drive 10 TTL loads. Output rise and fall times are independent of rate of change of incident light. Detector sensitivity has been internally temperature compensated. For additional output configuration options refer to SDP8304/8314 and SDP8604/8614.

Device Polarity:

- Buffer - Output is HI when incident light intensity is above the turn-on threshold level.
- Inverter - Output is LO when incident light intensity is above the turn-on threshold level.

Notes

- It is recommended that a bypass capacitor, 0.1 µF typical, be added between V_{CC} and GND near the device in order to stabilize power supply line.
- The radiation source is an IRED with a peak wavelength of 935 nm.
- Hysteresis is defined as the difference between the operating and release threshold intensities, expressed as a percentage of the operate threshold intensity.

ABSOLUTE MAXIMUM RATINGS

(25°C Free-Air Temperature unless otherwise noted)

Supply Voltage	7 V ⁽¹⁾
Duration of Output	1.0 sec
Short to V _{CC} or Ground	1.0 mA
High Level Output Current	1.0 mA
Irradiance	25 mW/cm ²
Operating Temperature Range	-40°C to 85°C
Storage Temperature Range	-40°C to 85°C
Soldering Temperature (5 sec)	240°C

Notes

- Derate linearly from 25°C to 5.5 V at 85°C.
