

Photologic[®] Slotted Optical Switches Type OPB916 Series

Features

- Choice of output configuration
- 24" min 26 AWG wires
- Low power consumption

Description

The OPB916 consists of an infrared emitting diode and a Photologic[®] photo integrated circuit mounted in an opaque housing with clear windows for dust protection. The deep slot allows for a longer reach of the optical path from the mounting plane, .650" (16.51 mm).

Internal apertures are .010" x 0.06" for the Photologic's "S side" and .050" x 0.06" for the LED, "E side". Two logic states and two electrical output types are available.

Custom electrical, wire or cabling are available. Contact your local representative or Optek for more information.

NOTES:

- (1) Derate linearly 1.67 mW/° C above 25° C.
- (2) Derate linearly 2.67 mW/° C above 70° C.
- (3) Clear dust protection.
- (4) Normal application would be with light source blocked, simulated by I_F = 0 mA.
- (5) All parameters tested using pulse technique.

PRECAUTIONS: Exposure of the plastic body to chlorinated hydrocarbons and ketones such as thread lock and instant adhesive products will degrade the plastic body. Cleaning agents methanol and isopropanol are recommended. Spray or wipe do not submerge.
