
Features

- Power-on reset generator with fixed delay time of 200ms Typ
- Manual reset input (APX823/APX825A)
- Reset output available in active-Low (APX823/APX824/APX825A), active-high (APX824/APX825A)
- Supply voltage supervision range 2.5V, 3V, 3.3V, 5V
- Watchdog timer
- Supply current of 30 μ A (Typ.)
- Temperature range: -40°C to 85°C
- SOT25 and SOT26: Available in "Green" Molding Compound (No Br, Sb)
- Lead Free Finish/RoHS Compliant (Note 1)

General Description

The APX823/APX824/APX825A family of supervisors provides circuit initialization and timing supervision, primarily for DSP and processor-based systems.

During power-on, **RESET** is asserted when supply voltage V_{CC} becomes higher than 1.1V. Thereafter, the supply voltage supervisor monitors V_{CC} and keeps **RESET** active as long as V_{CC} remains below the threshold voltage V_{TH} . An internal timer delays the return of the output to the inactive state (high) to ensure proper system reset. The delay time t_d , starts after V_{CC} has risen above the threshold voltage V_{TH} . When the supply voltage drops below the threshold voltage V_{TH} , the output becomes active (low) again. No external components are required. All the devices of this family have a fixed-sense threshold voltage V_{TH} set by an internal voltage divider.

The APX823/APX825A devices incorporate a manual reset input, **MR**. A low level at **MR** causes **RESET** to become active. The APX824/APX825A devices include a high-level output **RESET**. APX823/APX824/APX825A have a watchdog timer that is periodically triggered by a positive or negative transition at **WDI**. When the supervising system fails to retrigger the watchdog circuit within the time-out interval, t_{out} , **RESET** becomes active for the time period t_d . This event also reinitializes the watchdog timer. Leaving **WDI** unconnected disables the watchdog.

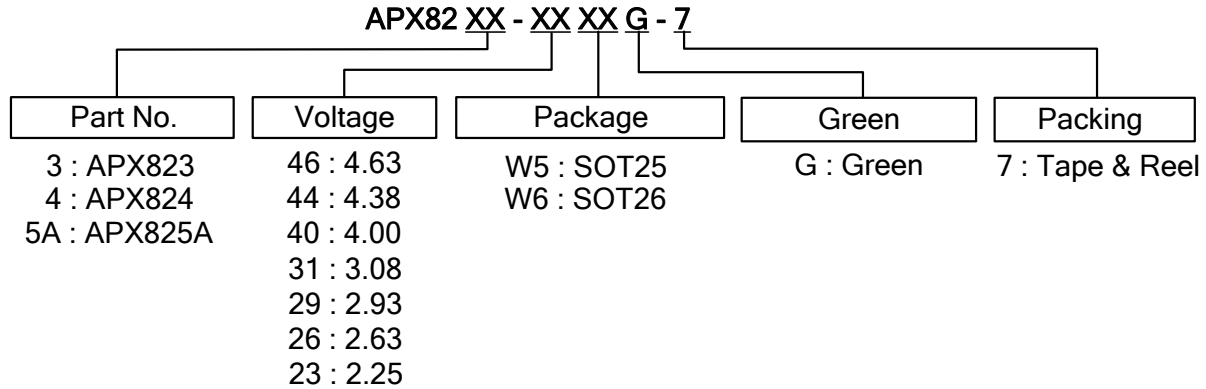

In applications where the input to the **WDI** pin may be active (transitioning high and low) when the APX823/APX824/APX825A asserting **RESET**, the APX823/APX824/APX825A does not return to a non-reset state when the input voltage is above V_t .

The product spectrum is designed for supply voltage of 2.5V, 3V, 3.3V and 5V. The circuits are available in a SOT25 and SOT26 packages. The APX823/APX824/APX825A devices are characterized for operation over a temperature range of -40°C to 105°C.

Applications

- Applications Using DSPs, Microcontrollers, or Microprocessors
- Industrial Equipment
- Programmable Controls
- Automotive Systems
- Portable/Battery-Powered Equipment
- Intelligent Instruments
- Wireless Communications Systems
- Notebook/Desktop Computers

Notes: 4. To ensure best stability of the threshold voltage, a bypass capacitor (ceramic, 0.1μF) should be placed near the supply terminals.

5. The RESET short-circuit current is the maximum pull-up current when RESET is driven low by a P bidirectional reset pin.

6. Test condition for SOT25 and SOT26: Devices mounted on FR-4 substrate PC board, 2oz copper, with minimum recommended pad layout.
