# **Differential Pressure Sensor**

# E8Y

"Cube" Type Differential Pressure Sensor with LED Display Offers High Precision Sensing

- New psi version available
- Compact, cube-style measuring 31 x 30 x 30 mm (1.22 x 1.18 x 1.18 in) saves mounting space
- Easy-to-read red LEDs
- Digital and analog output available
- Flow sensing type available
- PNP output types available upon special request

# Ordering Information\_

## Nomenclature.

### ■ E8Y PRESSURE SENSOR

### Display

### 1 Numerical value/menu indication

Displays the measured pressure and some menu settings.

### 2 Unit

Shows the measuring unit. Unit currently in use is illuminated.

### **③** OUT 1 indication LED

In measurement mode, it lights when OUT 1 output is on. In setting mode, it flashes when OUT 1 is being set.

### (4) OUT 2 indication LED

In measurement mode, it lights when OUT 2 output is on. In setting mode, it flashes when OUT 2 is being set.

### **Operation key**

### (5) ADJ

In measurement mode, it adjusts the Zero Point. In setting mode, it shifts to measurement mode.

### 6 MODE

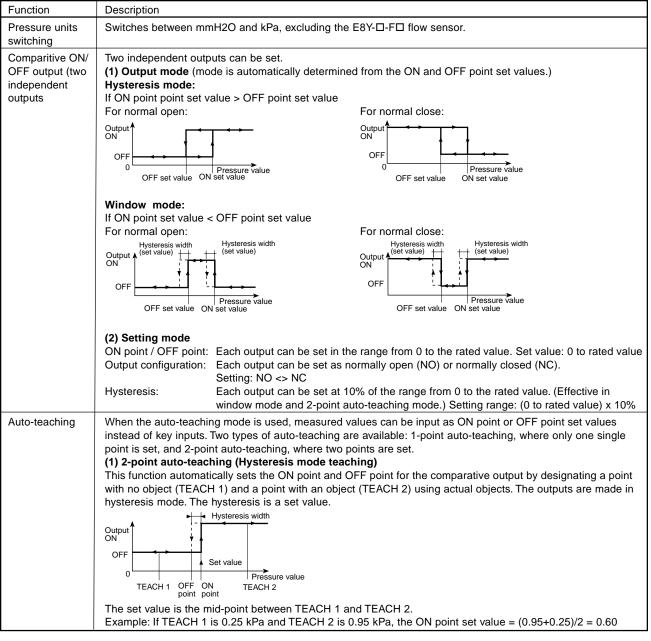

Selects the current number setting or menu option.

### **⑦ UP/DOWN**

In measurement mode, pushing the DOWN key displays the ON and OFF points of OUT 1; pushing the UP key displays the ON and OFF points of OUT 2. In setting mode, the UP and DOWN keys increase or decrease the numeric value, respectively, or scroll through the menu options. E8Y

# Operation

### ■ FUNCTIONS

(This table continues on the next page)

E8Y

E8Y =

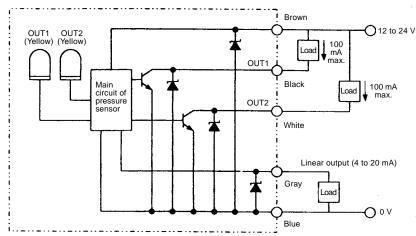

\_\_\_\_\_ E8Y

#### Functions Table - continued from previous page

Function	Description				
Auto-teaching (continued)	(2) 1-point auto-teaching (Window mode teaching) This function automatically sets the ON point and OFF point for the comparitive output by inputing a reference point (TEACH 1) using an actual object. The function operates only when an object exists. The outputs are made in the window mode. The hysteresis width and window width are set values. (The window width set value is valid only when 1-point teaching is set. Setting range: (0 to rated value) x 30%) Hysteresis width OFF ONF ONF ONF ONF ONF ONF ONF				
	Example: If the reference point (TEACH 1) is 0.90 kPa and the window width is 0.50 kPa, the ON set value = $(0.90 - 0.50)/2 = 0.20$ and the OFF point set value = $(0.90+0.50)/2 = 0.70$ .				
Key-protect (Set value lock function)	This function restricts switch operation to prevent the set value from being easily changed. Set value: OFF <> ON				
Set value zero-setting	Hold down the ADJ key for several seconds in the measurement mode to activate this function.				
Speed control function with measured pressure display	Select from three values of display speed for the measured pressure values. Set value: 0.1 s, 0.5 s, 1.0 s				
Error display	(1) Pressure warning during zeroing: Error display and warning if excess pressure or flow (exceeding rated value ±5%) is applied during zeroing.				
	Er.Ø				
	(2) Teaching error display: Warning if teaching is unsuccessful.				
	Er.E				
	(3) Short-circuit protection and display: If overcurrent flows in a connected load, the abnormal status is notified by an error display and the OUT LED, for the corresponding output, flashing. Transistor acts to cut the abnormal current.				
	Er.ā				
	(4) Abnormal pressure or flow detection: The diplayed value flashes to indicate the abnormal status if the applied pressure or flow exceeds the rated value by 10%. This error is automatically reset when the supplied value enters the rated range.				
	(5) ON/OFF point input error warning: Indicates if the difference between the ON point and OFF point in the window mode exceeds the hysteresis value + setting resolution (0.01 kPa/1 mmH <sub>2</sub> O).				
	Er.5

# Precautions

### ENVIRONMENT

- Do not use this product where explosive gas, ignitable gas, or any other harmful gas may be present.
- Do not use beyond rated supply voltage or under AC power supply. Explosion or fire may be caused.
- Do not mix up DC pole's wiring. Explosion or fire may be caused.
- This product cannot be used under corrosive gas or flammable gas.
- Do not install beside high voltage line or power line.
- Do not expose to water.
- Do not effect the product by ultrasonic vibration.

### CORRECT USE

- Use within rated pressure.
- Do not mix up connecting +, sign of pressure port. The "+" sign is for plus pressure, the "-" sign for minus pressure.
- Do not pull the cable more than 50 N (11.25 lbs).
- Filter the gas with an appropriate air filter so that the applied gas will be free of moisture or oil.
- When not using linear output and/or the ON/OFF output, cut the output lead wire and cover the tip with an insulation tube to prevent wrong connection.
