

SPT mV Series 0 to 3psi to 0 to 5000psi

Low Cost, Stainless Steel Pressure Transducer

General Description

The SPT stainless steel devices were developed for pressure applications that involve measurement of hostile media in harsh environments. These sensors will accommodate any media that will not adversely attack 304 or 316 stainless steel.

These SPT mV series transducers are calibrated and temperature compensated when used with a constant Voltage source. They feature a variety of pressure connections to allow use in a wide range of OEM equipment.

The SPT stainless steel devices are rugged and reliable transducers for use in a wide variety of pressure sensing applications where corrosive liquids or gases are monitored. Contact your local Invensys representative or the Invensys factory for additional details.

Specification Notes:

Note 1: Reference Conditions (unless otherwise noted): Supply, $V_S=10\text{ Vdc}\pm 0.01\text{ Vdc}$; $T_a=25^\circ\text{C}$.

Note 2: Span is the algebraic difference between the output voltage at full scale pressure and the output at zero pressure. Full Scale Span (FSS) is ratiometric to the supply voltage.

Note 3: Linearity is based on best-fit straight line from the zero to the full scale pressure. Hysteresis is the maximum output difference at any point within the operating pressure range for increasing and decreasing pressure.

Note 4: Maximum error band of the offset voltage or span over the compensated temperature range, relative to the 25°C reading.

Note 5: Long term stability over a six month period.

Note 6: Response time for a step change from the zero pressure to the full scale pressure.

Note 7: The maximum pressure that can be applied without changing the transducer's performance or accuracy.

Note 8: The maximum pressure that can be applied to a transducer without rupture of either the sensing element or transducer case.

Note 9: Common Mode Voltage as measured from output to ground.
