2.5 V/3.3 V Any Level Positive Input to -3.3 V/-5.5 V NECL Output Translator

Description

The MC100EP91 is a triple any level positive input to NECL output translator. The device accepts LVPECL, LVTTTL, LVCMOS, HSTL, CML or LVDS signals, and translates them to differential NECL output signals ($-3.0\text{ V} / -5.5\text{ V}$).

To accomplish the level translation the EP91 requires three power rails. The V_{CC} pins should be connected to the positive power supply, and the V_{EE} pin should be connected to the negative power supply. The GND pins are connected to the system ground plane. Both V_{EE} and V_{CC} should be bypassed to ground via $0.01\text{ }\mu\text{F}$ capacitors.

Under open input conditions, the \bar{D} input will be biased at $V_{CC}/2$ and the D input will be pulled to GND. These conditions will force the Q outputs to a low state, and Q outputs to a high state, which will ensure stability.

The V_{BB} pin, an internally generated voltage supply, is available to this device only. For single-ended input conditions, the unused differential input is connected to V_{BB} as a switching reference voltage. V_{BB} may also rebias AC coupled inputs. When used, decouple V_{BB} and V_{CC} via a $0.01\text{ }\mu\text{F}$ capacitor and limit current sourcing or sinking to 0.5 mA . When not used, V_{BB} should be left open.

Features

- Maximum Input Clock Frequency > 2.0 GHz Typical
- Maximum Input Data Rate > 2.0 Gb/s Typical
- 500 ps Typical Propagation Delay
- Operating Range: $V_{CC} = 2.375\text{ V}$ to 3.8 V ;
 $V_{EE} = -3.0\text{ V}$ to -5.5 V ; $GND = 0\text{ V}$
- Q Output will Default LOW with Inputs Open or at GND
- Pb-Free Packages are Available*

Application Information

All MC100EP91 inputs can accept LVPECL, LVTTTL, LVCMOS, HSTL, CML, or LVDS signal levels. The limitations for differential input signal (LVDS, HSTL, LVPECL, or CML) are the minimum input swing of 150 mV

and the maximum input swing of 3.0 V. Within these conditions, the input voltage can range from V_{CC} to GND. Examples interfaces are illustrated below in a 50 Ω environment ($Z = 50 \Omega$)
