

REVISIONS

LTR	DESCRIPTION	DATE (YR-MO-DA)	APPROVED
A	Drawing converted to new format. Change to table I. Add RHA data. Editorial changes throughout.	93-02-08	Monica L. Poelking
B	Add section 1.5, radiation features. Update the boilerplate in accordance with MIL-PRF-38535 requirements. Editorial changes throughout. – TVN	04-11-08	Thomas M. Hess
C	Add device type 03. Add device Class V criteria. Add radiation hardened assurance features in section 1.5 and SEP limits in table IB. Update boilerplate paragraphs to the current requirements as specified in MIL-PRF-38535. - jak	10-02-17	Thomas M. Hess

1. SCOPE

1.1 Scope. This drawing documents two product assurance class levels consisting of high reliability (device classes B, Q, and M) and space application (device classes S and V). A choice of case outlines and lead finishes are available and are reflected in the Part or Identifying Number (PIN). When available, a choice of Radiation Hardness Assurance (RHA) levels is reflected in the PIN.

1.2 PIN. The PIN is as shown in the following example:

1.2.1 RHA designator. Device classes B, S, Q, and V RHA marked devices meet the MIL-PRF-38535 specified RHA levels and are marked with the appropriate RHA designator. Device class M RHA marked devices meet the MIL-PRF-38535, appendix A specified RHA levels and are marked with the appropriate RHA designator. A dash (-) indicates a non-RHA device.

1.2.2 Device type(s). The device type(s) identify the circuit function as follows:

<u>Device type</u>	<u>Generic number</u>	<u>Circuit function</u>
01	54AC521	8-bit magnitude comparator with enable
02	54AC11521	8-bit magnitude comparator with enable
03	54AC521	Radiation hardened 8-bit magnitude comparator with enable

1.2.3 Device class designator. The device class designator is a single letter identifying the product assurance level as follows:

<u>Device class</u>	<u>Device requirements documentation</u>
M	Vendor self-certification to the requirements for MIL-STD-883 compliant, non-JAN class level B microcircuits in accordance with MIL-PRF-38535, appendix A
B, S, Q, or V	Certification and qualification to MIL-PRF-38535

1.2.4 Case outline(s). The case outline(s) are as designated in MIL-STD-1835 and as follows:

<u>Outline letter</u>	<u>Descriptive designator</u>	<u>Terminals</u>	<u>Package style</u>
R	GDIP1-T20 or CDIP2-T20	20	Dual-in-line
S	GDFP2-F20 or CDFP3-F20	20	Flat pack
X	See figure 1	20	Flat pack
2	CQCC1-N20	20	Leadless chip carrier

1.2.5 Lead finish. The lead finish is as specified in MIL-PRF-38535 for device classes B, S, Q, and V or MIL-PRF-38535, appendix A for device class M.

<b>STANDARD MICROCIRCUIT DRAWING</b> DEFENSE SUPPLY CENTER COLUMBUS COLUMBUS, OHIO 43218-3990	SIZE A		<b>5962-90985</b>
		REVISION LEVEL C	SHEET <b>2</b>

1.3 Absolute maximum ratings. 1/ 2/ 3/

Supply voltage range ( $V_{CC}$ ).....	-0.5 V dc to +6.0 V dc
DC input voltage range ( $V_{IN}$ ).....	-0.5 V dc to $V_{CC} + 0.5$ V dc
DC output voltage range ( $V_{OUT}$ ).....	-0.5 V dc to $V_{CC} + 0.5$ V dc
Clamp diode current ( $I_{IK}, I_{OK}$ ).....	$\pm 20$ mA
DC output current ( $I_{OUT}$ ).....	$\pm 50$ mA
DC $V_{CC}$ or GND current ( $I_{CC}, I_{GND}$ ).....	$\pm 100$ mA
Maximum power dissipation ( $P_D$ ).....	500 mW
Storage temperature range ( $T_{STG}$ ).....	-65°C to +150°C
Lead temperature (soldering, 10 seconds).....	+300°C
Thermal resistance, junction-to-case ( $\theta_{JC}$ ).....	See MIL-STD-1835
Junction temperature ( $T_J$ ).....	175°C

1.4 Recommended operating conditions. 2/ 3/

Supply voltage range ( $V_{CC}$ ).....	+3.0 V dc to +5.5 V dc
Input voltage range ( $V_{IN}$ ).....	0.0 V dc to $V_{CC}$
Output voltage range ( $V_{OUT}$ ).....	0.0 V dc to $V_{CC}$
Minimum high level input voltage ( $V_{IH}$ ):	
$V_{CC} = 3.0$ V.....	2.10 V
$V_{CC} = 4.5$ V.....	3.15 V
$V_{CC} = 5.5$ V.....	3.85 V
Maximum low level input voltage ( $V_{IL}$ ):	
$V_{CC} = 3.0$ V.....	0.90 V
$V_{CC} = 4.5$ V.....	1.35 V
$V_{CC} = 5.5$ V.....	1.65 V
Maximum high level output current ( $I_{OH}$ ):	
$V_{CC} = 3.0$ V.....	-4 mA
$V_{CC} = 4.5$ V.....	-24 mA
Maximum low level output current ( $I_{OL}$ ):	
$V_{CC} = 3.0$ V.....	+12 mA
$V_{CC} = 4.5$ V.....	+24 mA
Maximum input rise or fall time rate ( $\Delta t/\Delta v$ ):	
$V_{CC} = 3.6$ V, $V_{CC} = 5.5$ V.....	8 ns/V
Case operating temperature range ( $T_C$ ).....	-55°C to +125°C

1.5 Radiation features.

Device type 01:

Maximum total dose available (dose rate = 50 – 300 rads (Si)/s) .....  $\geq 100$  krad (Si)

Single event phenomenon (SEP) effective:

    linear energy threshold (LET) no upsets (see 4.4.5.4).....  $\leq 100$  MeV-cm<sup>2</sup>/mg

Device type 03:

Maximum total dose available (dose rate = 50 – 300 rads (Si)/s) .....  $\geq 300$  krad (Si)

Single event phenomenon (SEP) effective:

    linear energy threshold (LET) no upsets (see 4.4.5.4).....  $\leq 110$  MeV-cm<sup>2</sup>/mg

- 1/ Stresses above the absolute maximum rating may cause permanent damage to the device. Extended operation at the maximum levels may degrade performance and affect reliability. The maximum junction temperature shall not be exceeded except for allowable short duration burn-in screening conditions in accordance with method 5004 of MIL-STD-883.
- 2/ Unless otherwise specified, all voltages are referenced to GND.
- 3/ The limits for the parameters specified herein shall apply over the full specified  $V_{CC}$  range and case temperature range of -55°C to +125°C.

2. APPLICABLE DOCUMENTS

2.1 Government specification, standards, and handbooks. The following specification, standards, and handbooks form a part of this drawing to the extent specified herein. Unless otherwise specified, the issues of these documents are those cited in the solicitation or contract.

DEPARTMENT OF DEFENSE SPECIFICATION

MIL-PRF-38535 - Integrated Circuits, Manufacturing, General Specification for.

DEPARTMENT OF DEFENSE STANDARDS

MIL-STD-883 - Test Method Standard Microcircuits.  
 MIL-STD-1835 - Interface Standard Electronic Component Case Outlines.

DEPARTMENT OF DEFENSE HANDBOOKS

MIL-HDBK-103 - List of Standard Microcircuit Drawings.  
 MIL-HDBK-780 - Standard Microcircuit Drawings.

(Copies of these documents are available online at <http://assist.daps.dla.mil/quicksearch/> or <http://assist.daps.dla.mil> or from the Standardization Document Order Desk, 700 Robbins Avenue, Building 4D, Philadelphia, PA 19111-5094.)

2.2 Non-Government publications. The following document(s) form a part of this document to the extent specified herein. Unless otherwise specified, the issues of these documents are those cited in the solicitation or contract.

ELECTRONIC INDUSTRIES ALLIANCE (EIA)

EIA/JEDEC Standard No. 78 - IC Latch-up Test  
 JEDEC Standard No. 20 - Standard for Description of 54/74ACXXXX and 54/74ACTXXXX Advanced High-Speed CMOS Devices.

(Copies of these documents are available online at <http://www.jedec.org> or from Electronic Industries Alliance, 2500 Wilson Boulevard, Arlington, VA 22201-3834.)

AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM)

ASTM F1192 - Standard Guide for the Measurement of Single Event Phenomena (SEP) Induced by Heavy Ion Irradiation of semiconductor Devices.

(Copies of these documents are available online at <http://www.astm.org> or from ASTM International, 100 Barr Harbor Drive, P.O. Box C700, West Conshohocken, PA, 19428-2959).

2.3 Order of precedence. In the event of a conflict between the text of this drawing and the references cited herein, the text of this drawing takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

3. REQUIREMENTS

3.1 Item requirements. The individual item requirements for device classes B, S, Q, and V shall be in accordance with MIL-PRF-38535 and as specified herein or as modified in the device manufacturer's Quality Management (QM) plan. The modification in the QM plan shall not affect the form, fit, or function as described herein. The individual item requirements for device class M shall be in accordance with MIL-PRF-38535, appendix A for non-JAN class level B devices and as specified herein.

3.2 Design, construction, and physical dimensions. The design, construction, and physical dimensions shall be as specified in MIL-PRF-38535 and herein for device classes B, S, Q, and V or MIL-PRF-38535, appendix A and herein for device class M.

<b>STANDARD                  MICROCIRCUIT DRAWING</b> DEFENSE SUPPLY CENTER COLUMBUS COLUMBUS, OHIO 43218-3990	SIZE A		5962-90985
		REVISION LEVEL C	SHEET 4

- 3.2.1 Case outlines. The case outlines shall be in accordance with 1.2.4 herein.
- 3.2.2 Terminal connections. The terminal connections shall be as specified on figure 1.
- 3.2.3 Truth table. The truth table shall be as specified on figure 2.
- 3.2.4 Logic diagram. The logic diagram shall be as specified on figure 3.
- 3.2.5 Switching waveforms and test circuit. The switching waveforms and test circuit shall be as specified on figure 4.
- 3.2.6 Radiation exposure circuit. The radiation exposure circuit shall be maintained by the manufacturer under document revision level control and shall be made available to the preparing or acquiring activity upon request.
- 3.3 Electrical performance characteristics and postirradiation parameter limits. Unless otherwise specified herein, the electrical performance characteristics and post irradiation parameter limits are as specified in table I and shall apply over the full case operating temperature range.
- 3.4 Electrical test requirements. The electrical test requirements shall be the subgroups specified in table II. The electrical tests for each subgroup are defined in table I.
- 3.5 Marking. The part shall be marked with the PIN listed in 1.2 herein. In addition, the manufacturer's PIN may also be marked. For packages where marking of the entire SMD PIN number is not feasible due to space limitations, the manufacturer has the option of not marking the "5962-" on the device. For RHA product using this option, the RHA designator shall still be marked. Marking for device classes B, S, Q, and V shall be in accordance with MIL-PRF-38535. Marking for device class M shall be in accordance with MIL-PRF-38535, appendix A.
- 3.5.1 Certification/compliance mark. The certification mark for device classes B, S, Q, and V shall be a "QML" or "Q" as required in MIL-PRF-38535. The compliance mark for device class M shall be a "C" as required in MIL-PRF-38535, appendix A.
- 3.6 Certificate of compliance. For device classes B, S, Q, and V, a certificate of compliance shall be required from a QML-38535 listed manufacturer in order to supply to the requirements of this drawing (see 6.6.1 herein). For device class M, a certificate of compliance shall be required from a manufacturer in order to be listed as an approved source of supply in MIL-HDBK-103 (see 6.6.2 herein). The certificate of compliance submitted to DSCC-VA prior to listing as an approved source of supply for this drawing shall affirm that the manufacturer's product meets, for device classes B, S, Q, and V, the requirements of MIL-PRF-38535 and herein or for device class M, the requirements of MIL-PRF-38535, appendix A and herein.
- 3.7 Certificate of conformance. A certificate of conformance as required for device classes B, S, Q, and V in MIL-PRF-38535 or for device class M in MIL-PRF-38535, appendix A shall be provided with each lot of microcircuits delivered to this drawing.
- 3.8 Notification of change for device class M. For device class M, notification to DSCC-VA of change of product (see 6.2 herein) involving devices acquired to this drawing is required for any change that affects this drawing.
- 3.9 Verification and review for device class M. For device class M, DSCC, DSCC's agent, and the acquiring activity retain the option to review the manufacturer's facility and applicable required documentation. Offshore documentation shall be made available onshore at the option of the reviewer.
- 3.10 Microcircuit group assignment for device class M. Device class M devices covered by this drawing shall be in microcircuit group number 39 (see MIL-PRF-38535, appendix A).

- 1/ For tests not listed in the referenced MIL-STD-883, [e.g. I<sub>CC</sub> (O/V1)], utilize the general test procedure under the conditions listed herein.
- 2/ Each input/output, as applicable, shall be tested at the specified temperature, for the specified limits, to the tests in table I herein. Output terminals not designated shall be high level logic, low level logic, or open, except for all I<sub>CC</sub> tests, the output terminal shall be open. When performing these tests, the current meter shall be placed in the circuit such that all current flows through the meter.
- 3/ RHA parts for device type 01 of this drawing have been characterized through all levels M, D, P, L, and R. RHA parts for device type 03 of this drawing have been characterized through all levels M, D, P, L, R, and F of irradiation. However, these devices are only tested at the 'F' level. Pre and post irradiation values are identical unless otherwise specified in table I. When performing post irradiation electrical measurements for any RHA level, T<sub>A</sub> = +25°C.
- 4/ For negative and positive voltage and current values, the sign designates the potential difference in reference to GND and the direction of current flow, respectively; and the absolute value of the magnitude, not the sign, is relative to the minimum and maximum limits, as applicable, listed herein.
- 5/ For device classes B, S, Q, and V, this test is guaranteed, if not tested, to the limits specified in table I.
- 6/ RHA samples do not have to be tested at -55°C and +125°C prior to irradiation.
- 7/ When performing post irradiation electrical measurements for any RHA level, T<sub>A</sub> = 25°C. Limits shown are guaranteed at T<sub>A</sub> = +25°C ±5°C.

<b>STANDARD MICROCIRCUIT DRAWING</b> DEFENSE SUPPLY CENTER COLUMBUS COLUMBUS, OHIO 43218-3990	SIZE A		<b>5962-90985</b>
		REVISION LEVEL C	SHEET <b>10</b>

TABLE IA. Electrical performance characteristics - Continued.

- 8/ Transmission driving tests are performed at  $V_{CC} = 5.5$  V dc with a 2 ms duration maximum. This test may be performed using  $V_{IN} = V_{CC}$  or GND. When  $V_{IN} = V_{CC}$  or GND is used, the test is guaranteed for  $V_{IN} = 3.85$  V or 1.65 V. For device class M, subgroup 1 testing shall be guaranteed if not tested to the limits specified in table I. For radiation hardness assured (RHA) devices, subgroup 1 testing shall be performed.
- 9/ Power dissipation capacitance ( $C_{PD}$ ) determines both the no load dynamic power consumption ( $P_D$ ) and dynamic current consumption ( $I_S$ ). Where:  
 $P_D = (C_{PD} + C_L) (V_{CC} \times V_{CC})f + (I_{CC} \times V_{CC})$   
 $I_S = (C_{PD} + C_L) V_{CC}f + I_{CC}$   
 For both  $P_D$  and  $I_S$ ,  $f$  is the frequency of the input signal and  $C_L$  is the external output load capacitance.
- 10/ See EIA/JEDEC Standard No. 78 for electrically induced latch-up test methods and procedures. The values listed for  $I_{trigger}$  and  $V_{over}$  are to be accurate within  $\pm 5$  percent.
- 11/ Tests shall be performed in sequence, attributes data only. Functional tests shall include the truth table and other logic patterns used for fault detection. Functional tests shall be performed in sequence as approved by the qualifying activity on qualified devices. For  $V_{CC} = 4.5$  V,  $H \geq 2.5$  V,  $L < 2.5$  V;  $V_{IH} = 3.7$  V,  $V_{IL} = 0.6$  V. For device class M at  $V_{CC} = 4.5$  V, the following input values may be used:  $V_{IH} = 3.78$  V,  $V_{IL} = 0.68$  V. For  $V_{CC} = 3.0$  V,  $H \geq 1.5$  V,  $L < 1.5$  V;  $V_{IH} = 2.5$  V,  $V_{IL} = 0.45$  V. Allowable tolerances in accordance with MIL-STD-883 for the input voltage levels are already incorporated. Tests at  $V_{CC} = 3.0$  V are for RHA specified devices only ( $T_A = 25^\circ\text{C} \pm 5^\circ\text{C}$ ). Functional tests at  $V_{CC} = 3.0$  V are worst case for RHA specified devices. For device classes B, S, Q, and V, non-RHA specified devices, functional tests at  $V_{CC} = 3.0$  V are guaranteed, if not tested.
- 12/ Device classes B, S, Q, and V are tested at  $V_{CC} = 4.5$  V and  $T_C = +125^\circ\text{C}$  for sample testing and at  $V_{CC} = 4.5$  V and  $T_C = +25^\circ\text{C}$  for screening. Other voltages of  $V_{CC}$  and temperatures are guaranteed, if not tested (see 4.4.1d).
- 13/ AC limits at  $V_{CC} = 5.5$  V are equal to the limits at  $V_{CC} = 4.5$  V and guaranteed by testing at  $V_{CC} = 4.5$  V. AC limits at  $V_{CC} = 3.6$  V are equal to the limits at  $V_{CC} = 3.0$  V and guaranteed by testing at  $V_{CC} = 3.0$  V. Minimum AC limits for  $V_{CC} = 5.5$  V are 1.0 ns and guaranteed by guardbanding the  $V_{CC} = 4.5$  V minimum limits to 1.5 ns. For propagation delay tests, all paths must be tested.

TABLE IB. SEP test limits. 1/ 2/

Device type	SEP	$T_A =$ temperature $\pm 10^\circ\text{C}$	$V_{CC}$	Effective LET
01	SEL	$+125^\circ\text{C}$	3.6 V and 5.5 V	$\geq 100$ MeV-cm <sup>2</sup> /mg
03	SEL	$+125^\circ\text{C}$	3.6 V and 5.5 V	$\geq 110$ MeV-cm <sup>2</sup> /mg

1/ For SEP test conditions, see 4.4.4.2 herein.

2/ Technology characterization and model verification supplemented by in-line data may be used in lieu of end-of-line testing. Test plan must be approved by TRB and qualifying activity.

#### 4. VERIFICATION

4.1 Sampling and inspection. For device classes B, S, Q, and V, sampling and inspection procedures shall be in accordance with MIL-PRF-38535 or as modified in the device manufacturer's Quality Management (QM) plan. The modification in the QM plan shall not affect the form, fit, or function as described herein. For device class M, sampling and inspection procedures shall be in accordance with MIL-PRF-38535, appendix A.

4.2 Screening. For device classes B, S, Q, and V, screening shall be in accordance with MIL-PRF-38535, and shall be conducted on all devices prior to qualification and technology conformance inspection. For device class M, screening shall be in accordance with method 5004 of MIL-STD-883, and shall be conducted on all devices prior to quality conformance inspection.

##### 4.2.1 Additional criteria for device classes M, B, and S.

###### a. Burn-in test, method 1015 of MIL-STD-883.

- (1) Test condition A, B, C, or D. The test circuit shall be maintained by the manufacturer under document revision level control and shall be made available to the preparing or acquiring activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1015 of MIL-STD-883.
- (2)  $T_A = +125^\circ\text{C}$ , minimum.
- (3) Delete the sequence specified in 3.1.10 through 3.1.14 of method 5004 and substitute the first 7 test requirements of table IIA herein.
- (4) For device class M, unless otherwise noted, the requirements for device class B in method 1015 of MIL-STD-883 shall be followed.
- (5) Unless otherwise specified in the QM plan for static burn-in, device classes B and S, test condition A, method 1015 of MIL-STD-883, the test duration for each static test shall be 24 hours minimum for class S devices and in accordance with table IA of method 1015 for class B devices.
  - (a) For static burn-in I, all inputs shall be connected to GND. The output may be open or connected to  $V_{CC}/2 \pm 0.5\text{ V}$ . Resistors R1 are optional on inputs. A resistor R1 is optional on the output if it is open and required when it is connected to  $V_{CC}/2 \pm 0.5\text{ V}$ .  $R1 = 220\Omega$  to  $47\text{ k}\Omega$ .
  - (b) For static burn-in II, all inputs shall be connected through the R1 resistors to  $V_{CC}$ . The output may be open or connected to  $V_{CC}/2 \pm 0.5\text{ V}$ . A resistor R1 is optional on the output if it is open and required on the output when it is connected to  $V_{CC}/2 \pm 0.5\text{ V}$ .  $R1 = 220\Omega$  to  $47\text{ k}\Omega$ .
  - (c)  $V_{CC} = 5.5\text{ V} + 0.5\text{ V}$ ,  $-0.00\text{ V}$ .
- (6) Unless otherwise specified in the QM plan for dynamic burn-in, device classes B and S, test condition D, method 1015 of MIL-STD-883, the following shall apply:
  - (a) Input resistors =  $220\Omega$  to  $2\text{ k}\Omega \pm 20$  percent.
  - (b) Output resistors =  $220\Omega \pm 20$  percent.
  - (c)  $V_{CC} = 5.5\text{ V} + 0.5\text{ V}$ ,  $-0.00\text{ V}$ .
  - (d) The  $\bar{T}_{A=B}$  input pin shall be connected through a resistor in series with GND. The  $\bar{O}_{A=B}$  output pin shall be connected through a resistor in series with  $V_{CC}$  nominal. The An input pins shall be connected to the resistors in parallel to clock pulse 1 (CP1). The Bn input pins shall be connected to the resistors in parallel to clock pulse 2 (CP2).
  - (e) CP1 = 25 kHz to 1 MHz square wave; frequency of CP2 = 1/2 frequency of CP1; duty cycle = 50 percent  $\pm 15$  percent;  $V_{IH} = 4.5\text{ V}$  to  $V_{CC}$ ;  $V_{IL} = 0.0\text{ V} \pm 0.5\text{ V}$ ;  $t_r, t_f \leq 100\text{ ns}$ .

<b>STANDARD MICROCIRCUIT DRAWING</b> DEFENSE SUPPLY CENTER COLUMBUS COLUMBUS, OHIO 43218-3990	SIZE <b>A</b>		<b>5962-90985</b>
		REVISION LEVEL <b>C</b>	SHEET <b>16</b>

- b. Interim and final electrical test parameters shall be as specified in table II herein.
- c. For class S devices, post dynamic burn-in, or class B devices, post static burn-in, electrical parameter measurements may, at the manufacturer's option, be performed separately or included in the final electrical parameter requirements.

4.2.2 Additional criteria for device classes B, S, Q, and V.

- a. The burn-in test duration, test condition and test temperature, or approved alternatives shall be as specified in the device manufacturer's QM plan in accordance with MIL-PRF-38535. The burn-in test circuit shall be maintained under document revision level control of the device manufacturer's Technology Review Board (TRB) in accordance with MIL-PRF-38535 and shall be made available to the acquiring or preparing activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1015 of MIL-STD-883.
- b. Interim and final electrical test parameters shall be as specified in table II herein.
- c. Additional screening for device class V or S beyond the requirements of device class Q or B shall be as specified in MIL-PRF-38535, appendix B.

4.2.3 Percent defective allowable (PDA).

- a. The PDA for class S or V devices shall be 5 percent for static burn-in and 5 percent for dynamic burn-in, based on the exact number of devices submitted to each separate burn-in.
- b. Static burn-in I and II failures shall be cumulative for determining the PDA.
- c. The PDA for class B or Q devices shall be in accordance with MIL-PRF-38535 for static burn-in. Dynamic burn-in is not required.
- d. The PDA for class M devices shall be in accordance with MIL-PRF-38535, appendix A for static burn-in and dynamic burn-in.
- e. Those devices whose measured characteristics, after burn-in, exceed the specified delta limits or electrical parameter limits specified in table I, subgroup I, are defective and shall be removed from the lot. The verified number of failed devices times 100, divided by the total number of devices in the lot initially submitted to burn-in shall be used to determine the percent defective for the lot, and the lot shall be accepted or rejected based on the specified PDA.

4.3 Qualification inspection for device classes B, S, Q, and V. Qualification inspection for device classes B, S, Q, and V shall be in accordance with MIL-PRF-38535. Inspections to be performed shall be those specified in MIL-PRF-38535 and herein for groups A, B, C, D, and E inspections (see 4.4.1 through 4.4.5).

4.4 Conformance inspection. Technology conformance inspection for classes B, S, Q, and V shall be in accordance with MIL-PRF-38535 including groups A, B, C, D, and E inspections and as specified herein. Quality conformance inspection for device class M shall be in accordance with MIL-PRF-38535, appendix A and as specified herein. Inspections to be performed for device class M shall be those specified in method 5005 of MIL-STD-883 and herein for groups A, B, C, D, and E inspections (see 4.4.1 through 4.4.5).

- 1/ Blank spaces indicate tests are not applicable.
- 2/ PDA applies to subgroup 1 (see 4.2.3). For device classes S and V, PDA applies to subgroups 1 and 7 (see 4.2.3).
- 3/ The burn-in shall meet the requirements of 4.2.1a herein.
- 4/ On all class S lots, the device manufacturer shall maintain read-and-record data (as a minimum on disk) for burn-in electrical parameters (group A, subgroup 1), in accordance with test method 5004 of MIL-STD-883. For pre-burn-in and interim electrical parameters, the read-and-record requirements are for delta measurements only.
- 5/ Delta limits shall be required only on table IA, subgroup 1. The delta values shall be computed with reference to the previous interim electrical parameters. The delta limits are specified in table IIB.
- 6/ The device manufacturer may, at his option, either complete subgroup 1 electrical parameter measurements, including delta measurements, within 96 hours after burn-in completion (removal of bias) or may complete subgroup 1 electrical measurements without delta measurements within 24 hours after burn-in completion (removal of bias). When the manufacturer elects to perform the subgroup 1 electrical parameter measurements without delta measurements, there is no requirement to perform the pre-burn-in electrical tests (first interim electrical parameters test in table IIA).

Input current high level	I <sub>IH</sub>	03	±20 nA
Output voltage low level (V <sub>CC</sub> = 5.5 V, I <sub>OL</sub> = 24 mA)	V <sub>OL</sub>	03	±0.04 V
Output voltage high level (V <sub>CC</sub> = 5.5 V, I <sub>OH</sub> = -24 mA)	V <sub>OH</sub>	03	±0.20 V

<sup>1/</sup> These parameters shall be recorded before and after the required burn-in and life tests to determined delta limits.

<sup>2/</sup> These parameters shall be recorded before and after the required burn-in and life tests to determine the delta limits.

#### 4.4.1 Group A inspection

- a. Tests shall be as specified in table IIA herein.
- b. For device class M, subgroups 7 and 8 tests shall be sufficient to verify the truth table in figure 2 herein. The test vectors used to verify the truth table shall test all possible input to output combinations. For device classes B, S, Q, and V, subgroups 7 and 8 shall include verifying the functionality of the device.
- c. C<sub>IN</sub> and C<sub>PD</sub> shall be measured only for initial qualification and after process or design changes which may affect capacitance. C<sub>IN</sub> shall be measured between the designated terminal and GND at a frequency of 1 MHz. C<sub>PD</sub> shall be tested in accordance with the latest revision of JEDEC Standard No. 20 and table I herein. For C<sub>IN</sub> and C<sub>PD</sub>, test all applicable pins on five devices with zero failures.
- d. For device classes B, S, Q, and V, subgroups 9 and 11 tests shall be measured only for initial qualifications and after process or design changes which may affect dynamic performance.
- e. Latch-up tests are required for device classes B, S, Q, and V. These tests shall be performed only for initial qualification and after process or design changes which may affect the performance of the device. Latch-up tests shall be considered destructive. For latch-up tests, test all applicable pins on five devices with zero failures.

4.4.2 Group B inspection. When applicable, the group B inspection end-point electrical parameters shall be as specified in table IIA herein. For device class S steady steady-state life tests, the test circuit shall be maintained by the manufacturer and shall be made available to the acquiring or preparing activity upon request.

<b>STANDARD MICROCIRCUIT DRAWING</b> DEFENSE SUPPLY CENTER COLUMBUS COLUMBUS, OHIO 43218-3990	SIZE A		<b>5962-90985</b>
		REVISION LEVEL C	SHEET <b>19</b>

4.4.3 Group C inspection. The group C inspection end-point electrical parameters shall be as specified in table IIA herein.

4.4.3.1 Additional criteria for device class M. Steady-state life test conditions, method 1005 of MIL-STD-883:

- a. Test condition A, B, C, or D. The test circuit shall be maintained by the manufacturer under document revision level control and shall be made available to the preparing or acquiring activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1005 of MIL-STD-883.
- b.  $T_A = +125^{\circ}\text{C}$ , minimum.
- c. Test duration: 1,000 hours, except as permitted by method 1005 of MIL-STD-883.

4.4.3.2 Additional criteria for device classes B, S, Q, and V. The steady-state life test duration, test condition and test temperature, or approved alternatives shall be as specified in the device manufacturer's QM plan in accordance with MIL-PRF-38535. The test circuit shall be maintained under document revision level control by the device manufacturer's TRB in accordance with MIL-PRF-38535 and shall be made available to the acquiring or preparing activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1005 of MIL-STD-883.

4.4.4 Group D inspection. The group D inspection end-point electrical parameters shall be as specified in table IIA herein.

4.4.5 Group E inspection. Group E inspection is required only for parts intended to be marked as radiation hardness assured (see 3.5 herein).

- a. End-point electrical parameters shall be as specified in table II herein.
- b. For device classes B, S, Q, and V, the devices or test vehicle shall be subjected to radiation hardness assured tests as specified in MIL-PRF-38535 for the RHA level being tested. For device class M, the devices shall be subjected to radiation hardness assured tests as specified in MIL-PRF-38535, appendix A for the RHA level being tested. All device classes must meet the postirradiation end-point electrical parameter limits as defined in table I at  $T_A = +25^{\circ}\text{C} \pm 5^{\circ}\text{C}$ , after exposure, to the subgroups specified in table II herein.
- c. RHA tests for device classes M, B, S, Q, and V for levels M, D, P, L, and R shall be performed through each level to determine at what levels the devices meet the RHA requirements. These RHA tests shall be performed for initial qualification and after design or process changes which may affect the RHA performance of the device.
- d. Prior to irradiation, each selected sample shall be assembled in its qualified package. It shall pass the specified group A electrical parameters in table I for subgroups specified in table II herein.

4.4.5.1 Total dose irradiation testing. Total dose irradiation testing shall be performed in accordance with MIL-STD-883, method 1019, condition A, and as specified herein. Prior to and during total dose irradiation characterization and testing, the devices for characterization shall be biased so that 50 percent are at inputs high and 50 percent are at inputs low, and the devices for testing shall be biased to the worst case condition established during characterization. Devices shall be biased as follows:

- a. Inputs tested high,  $V_{CC} = 5.5 \text{ V dc } +5\%$ ,  $R_{CC} = 10\Omega \pm 20\%$ ,  $V_{IN} = 5.0 \text{ V dc } +5\%$ ,  $R_{IN} = 1 \text{ k}\Omega \pm 20\%$ , and the output is open.
- b. Inputs tested low,  $V_{CC} = 5.5 \text{ V dc } +5\%$ ,  $R_{CC} = 10\Omega \pm 20\%$ ,  $V_{IN} = 0.0 \text{ V}$ ,  $R_{IN} = 1 \text{ k}\Omega \pm 20\%$ , and the output is open.

<b>STANDARD MICROCIRCUIT DRAWING</b> DEFENSE SUPPLY CENTER COLUMBUS COLUMBUS, OHIO 43218-3990	SIZE <b>A</b>		<b>5962-90985</b>
		REVISION LEVEL <b>C</b>	SHEET <b>20</b>

4.4.5.1.1 Accelerated annealing test. Accelerated annealing shall be performed on classes M, B, S, Q, and V devices requiring an RHA level greater than 5K rads (Si). The post-anneal end-point electrical parameter limits shall be as specified in table I herein and shall be the pre-irradiation end-point electrical parameter limit at 25°C ±5°C. Testing shall be performed at initial qualification and after any design or process changes which may affect the RHA response of the device.

4.4.5.2 Dose rate induced latch-up testing. When required by the customer, dose rate induced latch-up testing shall be performed in accordance with method 1020 of MIL-STD-883 and as specified herein. Tests shall be performed on devices, SEC, or approved test structures at technology qualification and after any design or process changes which may affect the RHA capability of the process.

4.4.5.3 Dose rate upset testing. When required by the customer, dose rate upset testing shall be performed in accordance with method 1021 of MIL-STD-883 and herein.

- a. Transient dose rate upset testing for class M devices shall be performed at initial qualification and after any design or process changes which may affect the RHA performance of the devices. Test 10 devices with 0 defects unless otherwise specified.
- b. Transient dose rate upset testing for class Q and V devices shall be performed as specified by a TRB approved radiation hardness assurance plan and MIL-PRF-38535. Device parametric parameters that influence upset immunity shall be monitored at the wafer level in accordance with the wafer level hardness assurance plan and MIL-PRF-38535.

4.4.5.4 Single event phenomena (SEP). When specified in the purchase order or contract, SEP testing shall be performed on class V devices. SEP testing shall be performed on the Standard Evaluation Circuit (SEC) or alternate SEP test vehicle as approved by the qualifying activity at initial qualification and after any design or process changes which may affect the upset or latchup characteristics. Test four devices with zero failures. ASTM F1192 may be used as a guideline when performing SEP testing. The test conditions for SEP are as follows:

- a. The ion beam angle of incidence shall be between normal to the die surface and 60° to the normal, inclusive (i.e. 0° ≤ angle ≤ 60°). No shadowing of the ion beam due to fixturing or package related effects is allowed.
- b. The fluence shall be ≥ 100 errors or ≥ 10<sup>7</sup> ions/cm<sup>2</sup>.
- c. The flux shall be between 10<sup>2</sup> and 10<sup>5</sup> ions/cm<sup>2</sup>/s. The cross-section shall be verified to be flux independent by measuring the cross-section at two flux rates which differ by at least an order of magnitude.
- d. The particle range shall be ≥ 20 microns in silicon.
- e. The upset test temperature shall be +25°C. The latchup test temperature shall be at the maximum rated operating temperature ±10°C.
- f. Bias conditions shall be defined by the manufacturer for latchup measurements.
- g. For SEP test limits, see table IB herein.

4.5 Methods of inspection. Methods of inspection shall be specified as follows:

4.5.1 Voltage and current. Unless otherwise specified, all voltages given are referenced to the microcircuit GND terminal. Currents given are conventional current and positive when flowing into the referenced terminal.

## 5. PACKAGING

5.1 Packaging requirements. The requirements for packaging shall be in accordance with MIL-PRF-38535 for device classes B, S, Q, and V or MIL-PRF-38535, appendix A for device class M.

## 6. NOTES

6.1 Intended use. Microcircuits conforming to this drawing are intended for use for Government microcircuit applications (original equipment), design applications, and logistics purposes.

6.1.1 Replaceability. Microcircuits covered by this drawing will replace the same generic device covered by a contractor-prepared specification or drawing.

<b>STANDARD MICROCIRCUIT DRAWING</b> DEFENSE SUPPLY CENTER COLUMBUS COLUMBUS, OHIO 43218-3990	SIZE <b>A</b>		<b>5962-90985</b>
		REVISION LEVEL <b>C</b>	SHEET <b>21</b>

6.1.2 Substitutability. Device classes B and Q devices will replace device class M devices.

6.2 Configuration control of SMD's. All proposed changes to existing SMD's will be coordinated with the users of record for the individual documents. This coordination will be accomplished using DD Form 1692, Engineering Change Proposal.

6.3 Record of users. Military and industrial users should inform Defense Supply Center Columbus (DSCC) when a system application requires configuration control and which SMD's are applicable to that system. DSCC will maintain a record of users and this list will be used for coordination and distribution of changes to the drawings. Users of drawings covering microelectronic devices (FSC 5962) should contact DSCC-VA, telephone (614) 692-0544.

6.4 Comments. Comments on this drawing should be directed to DSCC-VA , Columbus, Ohio 43218-3990, or telephone (614) 692-0547.

6.5 Abbreviations, symbols, and definitions. The abbreviations, symbols, and definitions used herein are defined in MIL-PRF-38535 and MIL-HDBK-1331.

6.6 Sources of supply.

6.6.1 Sources of supply for device classes B, S, Q, and V. Sources of supply for device classes B, S, Q, and V are listed in QML-38535. The vendors listed in QML-38535 have submitted a certificate of compliance (see 3.6 herein) to DSCC-VA and have agreed to this drawing.

6.6.2 Approved sources of supply for device class M. Approved sources of supply for class M are listed in MIL-HDBK-103. The vendors listed in MIL-HDBK-103 have agreed to this drawing and a certificate of compliance (see 3.6 herein) has been submitted to and accepted by DSCC-VA.

STANDARD MICROCIRCUIT DRAWING BULLETIN

DATE: 10-02-17

Approved sources of supply for SMD 5962-90985 are listed below for immediate acquisition information only and shall be added to MIL-HDBK-103 and QML-38535 during the next revision. MIL-HDBK-103 and QML-38535 will be revised to include the addition or deletion of sources. The vendors listed below have agreed to this drawing and a certificate of compliance has been submitted to and accepted by DSCC-VA. This information bulletin is superseded by the next dated revision of MIL-HDBK-103 and QML-38535. DSCC maintains an online database of all current sources of supply at <http://www.dscclia.mil/Programs/Smcr/>.
