HIGH RELIABILITY CURRENT REGULATOR DIODES

Features

(*) • Available as screened equivalents using prefixes noted below:
MX as JTX equivalent
MV as JTXV equivalent
MS as JANS equivalent

(†) • Available in chip form using prefixes noted below:
CH as Aluminum on top, gold on back
CNS as Titanium Nickel Silver on top and bottom

• Provides essentially constant current over a wide voltage range. • High Source Impedance

Maximum Ratings

Operating Temperature: -55° C to +175° C
Storage Temperature: -55° C to +175° C
DC Power Dissipation: 475 mW @ $T_L \leq 75°C$
Power Derating: 3.1 mW/° C @ $T_L > 75°$ C
Peak Operating Voltage: 100 Volts

Electrical Characteristics @ 25°C unless otherwise specified.

TYPE NUMBER	REGULATOR CURRENT Ip (mA) @ V_S = 25V			MINIMUM DYNAMIC IMPEDANCE @ V_S - 25 V Z_S (MΩ)	MINIMUM KNEE IMPEDANCE @ V_K - 6.0 V Z_K (MΩ)	MAXIMUM LIMITING VOLTAGE @ I_L = 0.8 Ip (min) V_L (VOLTS)

NOTE 1: Z_S is derived by superimposing a 90Hz rms signal equal to 10% of V_S on V_S.
NOTE 2: Z_K is derived by superimposing a 90Hz rms signal equal to 10% of V_k on V_k.

Package Drawing

Mechanical Characteristics

CASE: Hermetically sealed glass case. DO-7 outline.

LEAD MATERIAL: Dumet.

LEAD FINISH: Tin plate.

THERMAL RESISTANCE: 300° C/W (Typical) junction to ambient.

POLARITY: Cathode end is banded.

WEIGHT: 0.2 grams

MOUNTING POSITION: Any.

SYMBOLS AND DEFINITIONS

I_D - Diode Current

I_P - Pinch-off Current: Regulator current at specified Test Voltage, V_S. I_P is sometimes also identified as I_S.

POV - Peak Operating Voltage: Maximum voltage to be applied to device.

α_{IS} - Current Temperature Coefficient.

V_K - Knee Impedance Test Voltage: Specified voltage used to establish Knee Impedance, Z_K.

V_L - Limiting voltage: Measured at I_L, V_L, together with Knee ac Impedance, Z_K, indicates the Knee characteristics of the device.

V_S - Test Voltage: Voltage at which I_p and Z_S are specified.

Z_K - Knee AC Impedance at Test Voltage: To test for Z_K, a 90 Hz signal v_K with rms value equal to 10% of test voltage V_K is superimposed on V_K: $Z_K = v_K/i_K$ where i_K is the resultant ac current due to v_K. To provide the most constant current from the diode, Z_K should be as high as possible; therefore, a minimum value of Z_K is specified.

Z_S - AC Impedance at Test Voltage: Specified as a minimum value. To test for Z_S, a 90 Hz signal v_S with rms value equal to 10% of test voltage, V_S, is superimposed on V_S: $Z_S = v_S/i_S$ where i_S is the resultant ac current due to v_S.

I_L - Limiting Current: 80% of Ip minimum used to determine Limiting Voltage, V_L.

V_{AK} - Anode-to-cathode Voltage.
