SMALL SIGNAL SCHOTTKY DIODES

DESCRIPTION

Metal to silicon rectifier diodes in glass case featuring very low forward voltage drop and fast recovery time, intended for low voltage switching mode power supply, polarity protection and high frequency circuits.

Symbol	Parameter	Value	Unit	
V _{RRM}	Repetitive Peak Reverse Voltage	40	V	
I _{F (AV)}	Average Forward Current	T _i = 60 °C	1	А
I _{FSM}	Surge non Repetitive Forward Current	itive Forward Current $T_i = 25 \ ^{\circ}C \\ t_p = 10ms$		А

Forward current flow in a Schottky rectifier is due to majority carrier conduction. So reverse recovery is not affected by storage charge as in conventional PN junction diodes.

Nevertheless, when the device switches from forward biased condition to reverse blocking state, current is required to charge the depletion capacitance of the diode.

allel with a variable capacitance equal to the junction capacitance (see fig. 5 page 4/4).

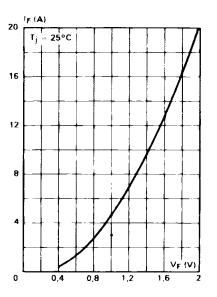

This current depends only of diode capacitance and

external circuit impedance. Satisfactory circuit be-

haviour analysis may be performed assuming that

Schottky rectifier consists of an ideal diode in par-
