²At $V_{IN} > V_{bb}$, the input current is not allowed to exceed $\pm 5\text{ mA}$.

³defined by P_{tot}

⁴Device on 50mm*50mm*1.5mm epoxy PCB FR4 with 6 cm² (one layer, 70 μm thick) copper area for V_{bb} connection. PCB is vertical without blown air.

⁵not subject to production test, specified by design

⁶ $V_{Loaddump}$ is setup without the DUT connected to the generator per ISO 7637-1 and DIN 40839 .

Supply voltages higher than $V_{bb(AZ)}$ require an external current limit for the GND pin, e.g. with a 150 Ω resistor in GND connection. A resistor for the protection of the input is integrated.
