

GXL SERIES

Micro-size Inductive Proximity Sensor

Amplifier Built-in

**High performance
in micro-size design**

Wide model variety

Models ranging from extremely compact type to long sensing range type are available to suit various applications.

Versatile mounting

Since the sensor is fingertip size, it can be mounted in a tight space.

Reduced wiring operation

The wiring cost of the DC 2-wire type is 2/3 that of a conventional model. Besides, the possibility of miswiring is reduced.

Particularly convenient when many sensors are used.

Wiring of the 3-wire type is cumbersome.

Wiring of the 2-wire type is simple and neat.

Flexible cable type

The bending durability of its cable is ten times that of the conventional model. The sensor can be mounted on a moving table or a robot arm.

※ Except PNP output type and 5 m 16.404 ft cable attached NPN output type

APPLICATIONS

Detecting wafer frame

Detecting aluminum pallet

Code reading

PRECAUTIONS FOR PROPER USE

All models

This product is not a safety sensor. Its use is not intended or designed to protect life and prevent body injury or property damage from dangerous parts of machinery. It is a normal object detection sensor.

Mounting

GXL-8 (DC 2-wire) type

The tightening torque should be 0.5 N·m or less.

To mount the sensor with a nut, the thru-hole diameter should be $\phi 3.4$ mm $\phi 0.134$ in. With the attached mounting screw and nut, take care that the thickness of the mounting plate should be 2.3 mm 0.091 in or less.

If a screw other than the attached screw is used, make sure to use a M3 truss head screw. (Do not use a flat head screw) or a pan head screw.

GXL-8 (NPN output) type

The tightening torque should be 0.5 N·m or less.

To mount the sensor with a nut, the thru-hole diameter should be $\phi 3$ mm $\phi 0.118$ in. With the attached mounting screw and nut, take care that the thickness of the mounting plate should be 2.3 mm 0.091 in or less.

If a screw other than the attached screw is used, make sure to use a M2.6 truss head screw.

Note: Do not use a M3 screw.

GXL-N12 type

<One point fixing>

<Two point fixing>

The tightening torque should be 0.49 N·m or less.

To mount the sensor with a nut, the thru-hole diameter should be $\phi 3.4$ mm $\phi 0.134$ in.

GXL-15 type

The tightening torque should be 1 N·m or less.

To mount the sensor with the optional sensor mounting bracket MS-GXL15, the thru-hole diameter should be $\phi 3.4$ mm $\phi 0.134$ in.

Screw, nut or washers are not supplied. Please arrange them separately.

To mount the long sensing range GXL-15 type on a magnetic body, such as iron, the enclosed aluminum sheet, or any other aluminum sheet having a minimum size of $30 \times 39.5 \times t 0.3$ mm $1.181 \times 1.555 \times t 0.012$ in (GXL-15HLU□ / GXL-15HL□: $30 \times 30 \times t 0.3$ mm $1.181 \times 1.181 \times t 0.012$ in), should be inserted between the sensor and the magnetic body.

However, it is not necessary to use the aluminum sheet when mounting on a non-magnetic body, such as, aluminum or an insulator.

When mounting the inductive proximity sensor with the optional sensor mounting bracket MS-GXL15-2, if the bracket is mounted close to the sensing part, the bracket itself gets sensed and the operation becomes unstable. Make sure to mount such that the mounting holes of the sensor and those of the mounting bracket are in one horizontal straight line.

Others

- Do not use during the initial transient time [10 ms (DC 2-wire type: 50 ms)] after the power supply is switched on.
- The output does not incorporate a short-circuit protection circuit. Do not connect it directly to a power supply or a capacitive load (excluding the DC 2-wire type).

GXL-N12FT type CN-13

Soldering

- To solder the terminals of the sensor and connector CN-13, observe the following conditions.

- Soldering temperature: 260 °C 500 °F or less
 Soldering time : 5 sec. or less
 (CN-13: 10 sec. or less)
 Soldering position : 1.5 mm 0.059 in, or more, away from the sensor body.

DC 2-wire type

Wiring

- The sensor must be connected to a power supply via a load. If the sensor is connected to a power supply without a load, the short-circuit protection makes the sensor inoperable. (The output stays in the OFF state and the indicator does not light up.) In this case, rectify by connecting the power supply via a load. Now, the sensor becomes operable. Further, take care that if the power supply is connected with reverse polarity without a load, the sensor will get damaged.

- For series connection (AND circuit) or parallel connection (OR circuit) of sensors, take care of the following.

Series connection (AND circuit)

Note: The output is generated normally even if the indicator does not light up properly.

Parallel connection (OR circuit)

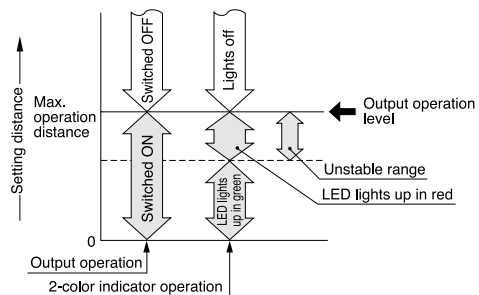

Note: The output is generated normally even if the indicator does not light up properly.

- The residual voltage of the sensor is 3 V. Before connecting a relay at the load, take care of its actuation voltage. (Some 12 V relays may not be usable.)

2-color indicator (Normally open type only)

- When the sensing object is in the stable sensing range, the LED lights up in green, and when the sensing object is in the unstable sensing range, the LED lights up in red. While the LED lights up in green, the sensing is performed stably without being affected by temperature drifts or voltage fluctuations.
