1. Application

This specifications applies to a color TFT-LCD module, LQ084V2DS01.

- ©These specification sheets are the proprietary product of SHARP CORPORATION("SHARP) and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP.
- The device listed in these specification sheets was designed and manufactured for use in OA equipment .
- ©In case of using the device for applications such as control and safety equipment for transportation(aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.
- ©Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment(trunk lines), nuclear power control equipment and medical or other equipment for life support.
- ©SHARP assumes no responsibility for any damage resulting from the use of the device which does not comply with the instructions and the precautions specified in these specification sheets.
- ©Contact and consult with a SHARP sales representative for any questions about this device.

2. Overview

This module is a color reflective and active matrix LCD module, named HR-TFT (High Reflective-TFT), incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, control circuit, power supply circuit. Graphics and texts can be displayed on a 640×3×480 dots panel with 262,144 colors by supplying 18 bit data signals(6 bit/color), four timing signals, +3.3V DC supply voltage for TFT-LCD panel driving.

3. Mechanical Specifications

| Parameter | Specifications | Unit | | |
|-----------------------|-------------------------------------------|---------|--|--|
| Display size | 21.5(8.4") Diagonal | cm | | |
| Active area • | 170.88 (H) x 129.60(V) | mm | | |

7. Timing characteristics of input signals

Timing diagrams of input signal are shown in Fig.2.

7-1. Timing characteristics

| Pa | rameter - | Symbol | Min. | Тур. | Max. | Unit | Remark |
|---------------|------------------|--------|------|-------|-------------|-------|--------|
| Clock | Frequency | 1/Tc | | 25.18 | 27.6 | MHz | |
| | High time | Tch | 5 | _ | _ | ns | |
| | Low time | Tcl | 10 | _ | _ | ns | |
| | Duty ratio | Th/T | 40 | 50 | 60 | % | |
| Data | Setup time | Tds | 5 | _ | | ns | |
| | Hold time | Tdh | 10 | _ | | ns | |
| Horizontal | Cycle | TH | 30.0 | 31.78 | _ | μз | |
| Sync.signal | | | 770 | 800 | 900 | clock | |
| | Pulse width | THp | 2 | 96 | 200 | clock | |
| Vertical | Cycle | TV | 515 | 525 | 5 60 | line | |
| Sync.signal | Pulse width | TVp | 2 | | 34 | line | |
| Horizontal di | splay period | THd | 640 | 640 | 640 | clock | |
| Hsync-Clock | phase difference | THc | 10 | | Tc-10 | ns | |
| Hsync-Vsync | phase difference | TVh | 1 | | ТН-ТНр | clock | |

[Note1] In case of lower frequency, logical function is warranted, but the deterioration of display quality, flicker etc may be occurred.

7-2. Horizontal display position

①In case ENAB is active

The horizontal display position is determined by ENAB signal and the input data corresponding to the rising edge

of ENAB signal is displayed at the left end of the active area.

| Parameter | | Symbol | Min, | Тур. | Max. | Unit | Remark |
|-------------|-------------|--------|------|--------|-------|-------|--------|
| ENAB signal | Setup time | Tes | 5 | | Tc-10 | ns | |
| | Pulse width | Tep | 2 | 640 | 640 | clock | |
| Hsync-ENAB | The | 44 | _ | TH-664 | clock | | |

② In case ENAB is "Low"

The display starts from the data of C104(clock) as shown in Fig.2. Be careful that the module does not work When ENAB is fixed

7-3. Vertical display position

| V-data start | TVs | 34 | line |
|---------------|-----|-----|------|
| V-data period | TVd | 480 | line |

| | | у | | 0,33 | 0.36 | 0.41 | | |
| Reflection | ratio | R | | 9 | 15 | | % | [Note5] |

The measuring method of the optical characteristics is shown by the following figure

The measuring system is LCD-5000 (with the unit reflecting diffusely) made by Otsuka electronics co.,ltd.

Fig. 3 Optical characteristics measurement method

[Note1] Definitions of viewing angle range:

[Note2] Definition of contrast ratio:

The contrast ratio is defined as follows:

Photodetecter output with all pixels white(GS63)

Contrast ratio(CR)=

Photodetecter output with all pixels black(GS0)

[Note3] Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

[Note4] It is assumed that chromaticity of the light source is (x=0.313,y=0.329).

[Note5] Definition of reflection ratio

Reflection ratio = Light detected level of the reflection by the LCD module

Light detected level of the reflection by the standard white board ×100

10. Handling Precautions

- a) Be sure to turn off the power supply when inserting or disconnecting the cable.
- b) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
- c) Since the front polarizer is easily damaged, pay attention not to scratch it.
- d) Since long contact with water may cause discoloration or spots, wipe off water drop immediately.
- e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.
- g) Since CMOS LSI is used in this module, take care of static electricity and take the human earth into consideration when handling.
- h) Laminated film is attached to the module surface to prevent it from being scratched. Peel the film off slowly just before the use with strict attention to electrostatic charges. Ionized air shall be blown over during action. Blow off 'dust' on the polarizer by using an ionized nitrogen gun, etc.
- i) Connect GND to 4 places of mounting holes to minimize against EMI and external noise.
- j) Observe all other precautionary requirements in handling general electronic components.
- k) When some pressure is added onto the module from rear side constantly, it causes display non-uniformity issue, functional defect, etc. So, please avoid such design.
- The force to the interface connector occurred by drop, shock or wiring of FPC, when mounting the user-side connector on a FPC board, may make the connector disconnected. Please secure the connection by any means.

11. Packing form

- a) Piling number of cartons: maximum 9 cartons
- b) Packing quantity in one carton: maximum 20 modules
- c) Carton size: $381mm (w) \times 377mm (D) \times 269mm(H)$
- d) Total mass of one carton filled with full modules: 4800g
- e) Packing form is shown in Fig.4

12. Reliability test items

| No. | Test item | Conditions |
|-----|---------------------------------|------------------------------------------------|
| 1 | High temperature storage test | Ta=60°C 240h |
| 2 | Low temperature storage test | Ta=-25°C 240h |
| 3 | High temperature | Ta=40℃;95%RH 240h |
| | & high humidity operation test | (No condensation) |
| 4 | High temperature operation test | Ta=50°C 240h |
| | | (The panel temp. must be less than 60°C) |
| 5 | Low temperature operation test | Ta=0°C 240h |
| 6 | Vibration test | Frequency: 5~500Hz/Gravity:9.8m/s ² |
| | (non-operating) | Sweep time: 13.3 minutes |
| | | Test period : 3 hours |
| | | (1 hour for each direction of X,Y,Z) |
| 7 | . Shock test | Max. gravity : 490m/s ² |
| | (non- operating) | Pulse width: 11ms, sine wave |
| | | Direction: ±X,±Y,±Z |
| | | once for each direction. |

[Result Evaluation Criteria]

Under the display quality test conditions with normal operation state, these shall be no change which may affect practical display function.

13. Others

- 2) Adjusting volume have been set optimally before shipment, so do not change any adjusted value.

 If adjusted value is changed, the specification may not be satisfied.
- 3) Disassembling the module can cause permanent damage and should be strictly avoided.
- 4) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.
- 5) When any question or issue occurs, it shall be solved by mutual discussion.

Fig4. Packing Form
