STANDARD

Resistive Touch Panel Specification 554 4-Wire Series RoHS compliant

FEATURES

- · Superior quality standard 4 wire resistive analog touch panel
- · Excellent specification and high quality
- Anti Newton ring technology
- High reliability materials
- Pen/finger type
- Transparency 80% typical
- RoHS compliant

PART NUMBERS

Touch Panels:

Part Number	Size	Туре	Part Number	Size	Туре
T010-1201-T200	17.0"	Pen/Finger	T010-1301-T320	7.0"	Pen/Finger (82%, AS)
N010-0554-T902	15.0"	Pen/Finger	N010-0514-T003	6.5"	Pen/Finger (W 16:9, Automotive, 82%, AS)

■ DIMENSION EXAMPLE (10.4" SHOWN)

DETAILED SPECIFICATION

1.0 APPLICATION

This specification applies to the standard FID-554 seriesTouch Panel (Pen/Finger type).

■ 2.0 ADDITIONAL APPLICATIONS

Complete specification document is available upon request for customers with whom we have an approved NDA in place.

■ 3.0 DESCRIPTION AND BLOCK DIAGRAM

This panel in combination with a control IC chip is used to transfer the co-orc the host system (see block diagram above).

Hardness 60°C

specification JIS K-5400

4.0 DRAWING (*Please see the diagram above.*)

Definitions of the major dimensions indicated on this diagram:

Effective Input Area (A) Area guaranteed to meet all the

Anti-input Area (C)

characteristics detailed in this specification An insulating area allowed to protect the touch panel from giving false readings when an enclosure touches the panel. (See fixing instructions)

Pencil hardness 3H minimum against

(Round type 8mm) Silicon Rubber

■ 5.0 CHARACTERISTICS

 5.1 MECHANICAL Operating Force
0.05~0.49 N (5 ~ 50gF) Measured with a Silicon Measurement Rod R 8

Hardness of Surface

5.2 OPTICAL Transparency

Haze

78% min. measured in the effective input area to JIS K 7105 using a MURAKAMI SHIKISAI KENKYUSHO type IIR 100 meter. 5% type measured in the effective input area using a MURAKAMI SHIKISAI KENKYUSHO type IIR 100 meter with an Anti Glare treated

Silicon Rubber Rod

orce

5.3 ELECTRICAL

Rated Voltage:DC 7V max.Resistance X axis: $300 \text{ to } 850 \Omega$ (at the connector)Resistance Y axis: $100 \text{ to } 600 \Omega$ (at the connector)Switch Bounce (Chattering):20ms min when using the silicon rubber measurement rodInsulation resistance: $10M\Omega$ minimum at 25KV DCDielectric Strength:No problems when at 25KV DC for 1 minuteLinearity:2% max.

Note 1:

Measurement condition of linearity is corrected within the control IC. In general the location accuracy is specified as follows:

Actual co-ordinate point - theoretical co-ordinate point = location accuracy.

In general a 9 point co-ordinate calibration system is used to adjust the micro controller accuracy. (20 point can be used in combination with an EEPROM design).

5.4 ENVIRONMENTAL

Operating Temperature (*):	-5°C to 60°C
Storage Temperature:	-20°C to 70°C
Operating Humidity:	20% to 85% RH with a Maximum wet bulb temperature of 38°C
Storage Humidity:	10% to 90% RH with a Maximum wet bulb temperature of 38°C
Chemical Resistance:	Coating with the following chemicals and storing at room temperature for 2 hours gives no problems. 10% NaCl-water solution, ethyl-acetate, ethyl-alcohol, toluene, methyl-ethyl-ketone
Low Air Pressure:	No issues down to 0.5 x Normal Air pressure

5.5 PEN LIFE

Note taking life:100,000 words minimumInput life :1,000,000 times minimumNote 1:1

Words are written in the notes area and the size of the word is 7.5mm x 6.75mm. A word is any Alphabet / Number / Mark. The pen is as shown below and applies a force of 250g. A failure is judged to happen when the current consumption or insulation resistance or dielectric strength are not met as shown in 5.3. The location accuracy with 9 point calibration must be ± 4.4 mm max.

■ 5.6 FINGER LIFE

A finger is simulated by a silicon rubber plunger R8 (Round type 8mm size) hardness 60°C at 200g at frequency 5Hz.

A failure is judged to happen when the current consumption or insulation resistance or dielectric strength are not met as shown in 5.3. The location accuracy with 9 point calibration must be \pm 4.4 mm max Operating force is 150g max.

5.7 INFORMATION ON THE PANEL

Production year 99 00 etc.

9 0 1	The left side number shows production year, eg 1999
0 1 2	The left side number shows production year, eg 2000
$\begin{bmatrix} & \cdot \\ & & \cdot & \cdot$	The first dot after the space shows production month, eg May The first dot after the space shows production month, eg June

■ 6 PACKAGING

■ 6.1 PACKING SPECIFICATION

Vibration:10~55 Hz at 1 Octave per minute 10G 20 cycles with one side 0.75mmDrop test:60cm Drop 1 corner, 3 crease lines and 6 faces. 1 each 1 timeAfter the test no glass:flaw or crack is seen, and no dent or scratch on the film.
Also glass and film must not separate.

■ 6.1 PACKING DETAILS

Each touch panel is placed into a plastic bag and is held in place by a slit cut into the side of the cardboard. A second insertion piece is placed into the carton to again add stability. The qty is written on the side of the box. For example the N010-0554-T001 has 80 pieces per box.

550 Type panel illustrated (554 type packed a similar way)

■ 7.0 REJECT CRITERIA

Description		Reject Criteria		
Film Dent		Area ≥ 0.1 mm ² Area ≥ 0.05 mm ² & area < 0.1 mm ² Area < 0.05 mm ²	: to be zero : to be max. 5 points : none specified	
Foreign material	Dot type	Area > 0.1 mm ² Area > 0.05 mm ² & area < 0.1 mm ² Area < 0.05 mm ²	: to be zero : to be max. 5 points : none specified	
between glass and film	Line type	Area > 0.1mm Area ≥ 0.03mm & width <0.1mm and length < 10mm Area < 0.05mm	: to be zero : to be max. 1 point : none specified	
Scrate	ch	Area ≥ 0.1mm Area ≥ 0.03mm & width <0.1mm with length < 80mm Area < 0.03mm & width <0.1mm with length < 30mm	: to be zero : to be max. 1 point : none specified	
Dot blur or hard coat missing Newton Ring Glass flaw		Area ≥ 0.5 mm ² Area ≥ 0.03 mm ² & area < 0.5mm ² Area < 0.05mm ²	: to be zero : to be max. 5 points : none specified	
		These must not be seen from Panel film side under a fluorescent lamp (3 wavelength type lamp). Not to be verified form glass side.		
		To be no flaw which is bigger than that shown in the fol number of flaws is not specified.	3mm 5mm	

■ 8.0 GENERAL POINTS OF CAUTION

Touch panels are made of glass, so care must be taken in handling them. Do not stress, pile, bend, lift by the cable or put any stress on the film, for example moving by film face vacuum. In order to clean wring dry a cloth which has been emersed in a natural detergent. DO NOT use any organic solvent, acid or alkali solution. Watch the edge of the panel when cleaning, again for safety reasons.

9.0 CONNECTION AND MOUNTING

The details below indicate the recommended mounting structure for panel and enclosure. The enclosure support to fix the touch panel must be over 1.0mm I width and must be outside the view (Transparent area). Also ensure that the enclosure does not cause miss input by touching the view area.

The following diagram shows that the enclosure edge must be between the View area and the guaranteed active area. Ensure space is allocated for the diodes, and we recommend that the material to fix the panel and enclosure is elastic. Special design would be required to stop water ingress. The corners of the touch panel are conductive so do not touch any metal parts after mounting.

Top View (Picture, with conductive side down)

Location	Detect	± 0.1	
1. 2. 3. 4.	Bottom Left Top Right	5.1 5.1 5.1 5.1 5.1 5.1 5.1 5.1 5.1 5.1	NI 120X-7550-010N

(Drawing) with conductive connector and glass side down. See page 1 for detail of connector exit side which is left.

(Mating connector type FCI or equivalent SFW4R-1STAE1-LF: for FPC)
