⚠ WARNING

PERSONAL INJURY

DO NOT USE these products* as safety or emergency stop devices, or in any other application where failure of the product could result in personal injury.

** Does not apply to 24CE/924CE Series (page 23), GSS Series (page 80), GK Series (pages 78, 83, 85) or CPS Series (page 89)*

Failure to comply with these instructions could result in death or serious injury.

⚠ WARNING

MISUSE OF DOCUMENTATION

- The information presented in this product sheet (or catalogue) is for reference only. DO NOT USE this document as product installation information.
- Complete installation, operation and maintenance information is provided in the instructions supplied with each product.

Failure to comply with these instructions could result in death or serious injury.

Honeywell

Introduction - How to use this catalogue	Page 2	HDLS Series	Page
EVN2000 Series	Page	Heavy Duty Limit Switches	
Fast Install Limit Switches		Suitable for special applications in corrosive environments. Housed in a rugged die-cast zinc body and epoxy coated for protection, they are available with a range of switching and head options.	
A recent addition to our range. Saves over 50 % in installation time with a design that eliminates the need to gain access to the inside of the housing in order to connect the switch.		Explosion Proof Switches	Page
SZL-VL Series	Page	A range of switches designed for use in hazardous applications in potentially explosive atmospheres. Most are UL-CSA listed and some meet the requirement of the new European Directive 94/9/EC (commonly referred to as the ATEX Directive).	
Limit Switches		Levers for Limit Switches	Page
New, economic, compact, rugged, dependable limit switches.		A range of levers for use with Honeywell's Limit Switches. Select the best one for your application.	
GL Series EN50041/47	Page	Safety Switches for machine guarding	Page
Global Limit Switches		Safety interlock switches, limit switches and cable-pull limit switches for industrial machine safety.	
A complete range of CENELEC approved products, suitable for most industrial applications.		Relays	Page
SL1 Series	Page	Designed for a wide range of applications including power as well as logic control for factory machines and control panels.	
Space saving size for machine miniaturization, different contact and actuators available.		Linear and Rotary Position	Page
14/914CE Series	Page	A wide selection of Hall-effect, magnetoresistive, and potentiometric devices for detecting the presence of a magnetic field or linear and rotary position.	
Miniature Enclosed Switches		Opto Sensors	Page
Miniature, rugged, pre-wired switches, meeting the requirements of the Low Voltage directive. They come with a range of head styles and sealing options.		Ultrasonic Distance Sensors	Page
24/924CE Series	Page	Ultrasonic position sensors for presence/absence sensing, precision distance sensing or tracking for areas where other sensing technologies have difficulty, such as clear or shiny objects, foggy or particle laden air, or splashing liquids.	
Miniature Enclosed Switches		Pressure sensors	Page
Miniature, rugged, direct opening action contacts. This switch is available with a variety of actuators and is pre-wired.		We offer stainless steel and silicon pressure sensors depending on the application, as well as a variety of high purity pressure sensors.	
LS Series	Page	Honeywell Sensing and Control products	Page
Compact Limit Switches		Index	Page
A range of compact limit switches designed for accurate repeatability under the most stringent conditions. Special oil resistant and high temperature versions are available.			
BF Series	Page		
Medium Duty Limit Switches			
Rugged plastic enclosure, with large internal cavity for ease of wiring.			
BZE/DTE Series	Page		
Medium Duty Limit Switches			
Side or flange mount, momentary or maintained contact, sealed or unsealed actuators, removal of bottom enclosure for ease of wiring.			
BAF/DTF Series	Page		
High Capacity Enclosed Switches			
Rugged cast aluminium housed switches, sealed for wash-down applications. Momentary or maintained contacts, right or left hand actuators, 3 hole mounting.			

HONEYWELL INDUSTRIAL SWITCHES AND SENSORS

Honeywell Industrial Switches and Sensors provide a wide selection of products and technologies for applications in most industrial applications. This catalogue contains our most popular listings. To view our complete range of products, visit our website at <http://www.honeywell.com/sensing>.

Honeywell is a worldwide leader in advanced switching and sensing technology. Our reputation for technology, quality and reliability is second to none. We have more than 60 years of experience; and extensive knowledge of Industrial applications, an extensive customer service and support network. Honeywell manufactures the original MICROSWITCH brand switch and we offer one of the most complete lines of global electro-mechanical heavy duty limit switches. Sealed versions keep out moisture and other contaminants. Explosion proof types are designed for use in hazardous locations. Safety versions provide direct opening action contacts for machine guarding and emergency stops.

We are a recognized technology leader in the development and manufacture of pressure and position-sensing transducers and controls. We use the latest in manufacturing technology to produce hundreds of thousands of transducers a year. Millions of units are currently performing in a multitude of continuous-duty applications around the world, where they typically outlast the systems they support. We have ISO 9001 certified facilities and Class 10 cleanroom capability, and we manufacture a full line of high purity pressure sensing and control products; each individually tested, inspected and certified to be in full compliance with the product specification.

A comprehensive and diverse line of speed and position sensors for the Industrial market place is also available. With the combined capabilities of three well-known product brands - Data Instruments, Clarostat, Electro and New England Instruments - Honeywell continuously strives to solve customers' application problems. Whether you need custom designed sensors for proprietary OEM applications or off-the-shelf sensor solutions, our extensive in-house design, manufacturing and environmental testing capabilities offer solutions and alternatives to meet your needs.

How to use this catalogue

For each referenced listing, key specification parameters, descriptions and mounting drawing information are presented. These illustrate our capabilities while the specifications include allow easy differentiation between similar products.

There are, of course, many more product options available. Full product specification may be accessed on our website (www.honeywell.com/sensing). At the Home page enter the catalogue listing reference in the SEARCH box and click GO! This will take you directly to the interactive catalogue/specification search tables for this listing. Alternatively select and click the interactive catalogue icon on the Home page and then choose a product category against which to do a specification search.

Also on the website you can access installation instructions, application notes, Frequently Asked Questions (FAQs), selection guides and additional technical information.

Mounting dimensions

Mounting dimensions shown in each product section are for reference only. For exact information, request an engineering drawing from your nearest Honeywell sales office or visit our website and access it through the interactive catalogue. Where dual dimensions are shown on mounting drawings, the first or upper one is millimetres (mm) and the second or lower is inches (in). Where single dimensions are shown, they are millimetres (mm), unless otherwise stated.

To order these products

Simply contact your local Honeywell Sales Representative, your Honeywell Distributor or your local Honeywell office.

If you need a product not listed in this catalogue

One of Honeywell's strengths is in application-specific packaging of sensing technology. Honeywell provides many variations of our basic switches and sensors. For more information, either browse the full interactive catalogue available on our website, or telephone the following numbers:

Select the right product – select the right supplier Delivering excellence in system critical sensing solutions

A system is critical if the quality, reliability, delivery and customer service associated with a component part is essential to the performance of the operation or end product. If a sensor or a switch is critical to the performance, cost effectiveness, delivery or safety of a product or operation then it's systems critical. It is therefore a defining element in the performance of the system under whatever conditions apply. Failure of the component - or failure of delivery of the component - results in lost productivity, increased costs or a catastrophic event such as a shutdown. Therefore selecting the right product is essential. It can make the difference between success and failure.

Honeywell Sensing and Control – delivering excellence

To select the right product, first select the right supplier. To deliver the right products for our customers' applications we listen to them to understand their needs. Using techniques such as "Voice of the Customer" and "Concept Engineering" we make sure that the products and solutions we deliver are the right ones. As part of Honeywell we can use local knowledge and understanding combined with global expertise and resources to achieve this. We can deploy many key technologies to bring innovative solutions to customers' problems.

Our products are manufactured to work well and to last. We use Six Sigma Plus productivity to ensure this is the case. We have award winning manufacturing facilities around the world and recognised world class business excellence in manufacturing and supply chain management to deliver on time, anywhere in the world.

Our e-business approach offers instant access to product information, technical support and application knowledge through our Internet site. Check out our powerful new interactive catalogue that can search and find the right products for customers' needs and deliver a drawing ready for incorporation in a CAD system direct to your desk.

And of course, we manage our whole business for the benefit of our customers, using an acknowledged world-class business excellence approach that incorporates Six Sigma principles.

Expanded Product Lines

As well as many new and innovative switches, this catalogue includes an expanded range of Pressure and Position Sensors, previously known under the Clarostat, NEI and Electrocorporation brand names.

Blank page

Industrial Electromechanical Limit Switches

Honeywell offers an advanced line of heavy duty limit switches and a wide selection of application-proven enclosed switches (precision snap-acting switches sealed in rugged metal housing). Sealed versions keep out moisture and other contaminants. Our products meet or exceed critical standards allowing for global use. Our rugged switches are suitable for use in harsh-duty, wash-down environments. We offer a variety of circuitry, terminations and actuators to ensure that can match your choice of switch to your application.

Limit and enclosed switches are the cost effective switches of choice for detecting objects which can be touched. When an object comes in contact with an actuator, the switch operates. Rugged and dependable, these switches are offered in a variety of sizes, with different seals, enclosures, actuation, circuitries and electrical ratings. Enclosed switches are known for high precision and low cost. Limit Switches are especially rugged and well sealed. Explosion proof switches are designed for use in hazardous locations.

The Honeywell switches featured here are all proven in a broad range of Industrial applications - machine tools, packaging machinery, lifting gear, presses and construction machinery.

More information about our complete product range - and the depth of product available within each product line - can be found on our interactive catalogue at www.honeywell.com/sensing.

MICRO SWITCH Brand products

Honeywell has been at the forefront of switching technology since we were the first to develop the precision snap-action switch more than 60 years ago. Ever since we introduced the MICRO SWITCH Brand Products in 1937, we have been recognized as the performance standard that all other switches are measured against. We continue in that tradition by constantly improving the technology, cost-effectiveness, and delivery of these hardworking, versatile electromechanical switches.

Proper application of limit switches

The following are guidelines for the correct application of Limit Switches. Never use the Limit Switch as a physical end stop. Mechanical damage or incorrect operation may occur if this is done. Always ensure that the mechanical actuator is protected from excessive mechanical shock. Never release the actuator suddenly - gradual actuation and release will ensure that stress on the mechanics of the switch is kept to a minimum. This has the added benefit that the switch life will be improved. The diagrams illustrate how to actuate your limit switch for optimum performance.

Standards and Electrical rating

IEC/EN 60947-1 explains the general rules relating to **Low Voltage switchgear and controlgear**. The purpose of this standard is to harmonize as much as possible the product performance and test requirements for equipment where the rated voltage does not exceed 1,000 Vac or 1,500 Vdc.

IEC 60947-5-1 is part 5 of the general rules which relates to **Control-circuit devices and switching elements**, where rated voltage does not exceed 1,000 Vac or 600 Vdc. There are special requirements for control switches with positive opening operation. These switches are marked on the outside with this symbol:

The Contact Element form defines the configuration and number of contacts within the switch.

Form Za – both contact elements have the same polarity

Form Zb – the two contact elements are electrically separated.

The **Utilization Category** defines the type of current carried – ac or dc – and the typical application where the switch is used.

The contact rating **Designation** relates to the Utilization Categories and defines the conventional thermal current I_{th} (a) rated operational current I_e (A) at rated operational voltages U_e and the VA rating.

Actuators

A range of actuators is available for limit switches. Illustrations of actuator types available from this catalogue are shown at the beginning of each product family. Other actuators may be available - for more information please contact your local Honeywell office.

Roller lever 	Top roller lever 	Adjustable roller lever 	Top pin plunger 	Top pin plunger, boot seal 	
Top roller plunger 	Top roller plunger, boot seal 	Top roller plunger, perpendicular 	Top roller plunger, perpendicular, boot seal 	Ball bearing plunger 	
Side pin plunger 	Side roller plunger 	Roller lever 	Yoke lever 	Rod lever 	Wobble head

For limit switches with pushrod actuators, the actuating force should be applied as nearly as possible in line with the pushrod axis.

Cam or dog arrangements should be such that the actuator is not suddenly released to snap back freely.

Operating mechanisms for limit switches should be so designed that, under any operating or emergency conditions, the limit switch is not operated beyond its overtravel limit position. A limit switch should not be used as a mechanical stop.

For limit switches with lever actuators, the actuating force should be applied as nearly perpendicular to the lever as practical and perpendicular to the shaft axis about which the lever rotates.

A Note on Degrees of Protection

IP Classification

The **IEC 529** standard describes a system for classifying the degree of protection provided by the enclosures of electrical equipment. The level of protection given by the enclosure is indicated by the **IP** code. This code system uses the letters “IP” (International Protection) followed by up to four digits. Normally only the first two digits are used.

IP 1st Digit	2nd Digit	3rd Digit	4th Digit
--------------	-----------	-----------	-----------

The first digit is numerical and indicates the level of protection within the enclosure against the ingress of solid foreign objects and access to hazardous parts by persons.

The second digit is also numerical and indicates the level of protection against the ingress of **WATER** into the enclosure.

The third digit is a letter and indicates a higher level of protection for persons against access to hazardous parts.

The fourth digit is also a letter and is used in exceptional cases for supplementary information.

If the first or second digit is not required to be specified, then it is replaced by the letter “X” (“XX” if both digits are not required). While the tables below serve as a guide to the level of protection, Honeywell recommends that customers refer to the full official IEC specification for the exact definitions. If in doubt about the degree of protection required for a particular application, please consult your local Honeywell office.

Note:

The IEC 529 standard does not relate to protection against rust, corrosion, icing or corrosive solvents (e.g. cutting fluids) and that product coded IP 67 may not necessarily meet IP 66 requirements.

First Digit Protection against ingress of solid objects

IP TEST

- 0 no protection
- 1 protected against solid objects with a diameter greater than 50 mm
- 2 protected against solid objects with a diameter greater than 12 mm
- 3 protected against solid objects with a diameter greater than 2.5 mm
- 4 protected against solid objects with a diameter greater than 1 mm
- 5 protected against dust-limited ingress (no harmful deposit)
- 6 totally protected against dust

Second Digit Protection against ingress of water

IP TEST

- 0 no protection
- 1 protected against vertically falling drops of water
- 2 protected against vertically falling drops of water when the enclosure is tilted at an angle up to 15 degrees
- 3 protected against water sprayed at an angle of 60 degrees from the vertical
- 4 protected against splashing water from all directions – limited ingress (no harmful effects)
- 5 protected against low pressure jets of water from all directions – limited ingress permitted
- 6 protected against powerful jets of water from all directions – limited ingress permitted
- 7 protected against the effects of temporary immersion in water
- 8 protected against the effects of continuous immersion in water

NEMA Classification (USA)

NEMA (National Electrical Manufacturer’s Association) prepares standards which define a product, process or procedure with reference to one or more of the following: nomenclature, composition, construction, dimensions, tolerances, safety, operating characteristics, performance, quality, electrical rating, testing and the service for which designed. This standard provides degrees of protection for Enclosures for Electrical Equipment (1000 Volts Maximum) similar to that of the IEC 529 standard. The reference standard herein reflects the latest data in the NEMA Standards Publication when this information went to print. Please check for the latest information.

Non-hazardous locations

Type 1 enclosures are intended for indoor use primarily to provide a degree of protection against contact with the enclosed equipment.

Type 3 enclosures are intended for outdoor use primarily to provide a degree of protection against windblown dust, rain, sleet, and external ice formation.

Type 4 enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against windblown dust and rain, splashing water, and hose-directed water.

Type 4X enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against corrosion, windblown dust and rain, splashing water, and hose-directed water.

Type 6 enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against the entry of water during occasional temporary submersion at a limited depth.

Type 6P enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against the entry of water during prolonged submersion at a limited depth.

Type 12 enclosures are intended for indoor use primarily to provide a degree of protection against dust, falling dirt, and dripping noncorrosive liquids.

Type 13 enclosures are intended for indoor use primarily to provide a degree of protection against dust, spraying water, oil and noncorrosive coolant.

Note:

Enclosures are based, in general, on the broad definitions outlined in NEMA Standards. Therefore, it will be necessary to ascertain that a particular enclosure will be adequate when exposed to the specific conditions that might exist in intended applications.

Except as might otherwise be noted, all references to products relative to NEMA enclosure type are based on Honeywell evaluation and Underwriter’s Laboratory (UL) tested. This NEMA Standards Publication does test for environmental conditions such as corrosion, rust, icing, oil, and coolants. The IEC 529 does not, and does not specify degree of protection against mechanical damage of equipment. For this reason, and because the tests and evaluations for other characteristics are not identical, the IEC Enclosure Classification Designations cannot be exactly equated with NEMA Enclosure Type Numbers.

EVN2000 Series EN 50047 Global Limit Switches

New

Actuators

The EVN2000 series limit switch is an innovative product which has been developed to address a need highlighted by Original Equipment Manufacturers (OEM), where "Ease of Wiring" is required. With the new design there is no need for access to the inside of the housing and therefore the housing cover, cover screws and gasket become obsolete. Furthermore, the integrated cable gland eliminates the need for additional conduit or cable gland hardware. All Normally Closed (NC) contacts are Direct Opening.

Mechanical life:

10 million

Sealing:

IP 66/67, NEMA 1, 12, 13

Operating temperature:

-25 °C to 85 °C (-13 °F to 185 °F)

Approvals:

IEC/EN 60947-5-1

VL Series General Purpose Compact Limit Switches

Actuators

The new economical SZL-VL Series miniature type limit switches are specially designed for applications of small mounting space. These miniature switches are ideal for OEM machinery which requires a rugged and reliable limit switch that is capable of being mounted in space restricted applications. A wide range of actuators and optional neon lamp indicators add additional flexibility. A special pre-molded flexible cable gland allows for fast and simple wiring termination.

Mechanical life:	up to 10 million operations
Sealing:	IP 64
Operating temperature:	-20 °C to 60 °C (-4 °F to 140 °F)
Approvals:	UL, C-UL, CE
Termination:	Cable gland
Contacts:	Gold plated silver
Electrical ratings:	250 Vac 125 Vdc max.
Ampere rating:	5 A @ 250 Vac max./0.4 A @ 125 Vdc max.
Switching options:	SPDT
	Single Pole, Double Throw, Double break (1NC/1NO)

GLS Series Global Limit Switches

GLS Series switches offer a complete range of CENELEC approved products, and are suitable for most industrial applications.

The standard product EN 50041 norm defines the switch mounting centres as 30 mm x 60 mm and also defines the switching characteristics of the side rotary head with fixed lever, top pin plunger and top roller plunger. This means that the switch can be interchanged in the application with other EN 50041 switches with mounting and switching characteristics maintained. Honeywell offers many more head styles and switching options.

The miniature EN 50047 product range offers the user a choice of plastic, metal and three conduit versions which are all mounting (20 mm x 22 mm) compatible with each other. The EN 50047 standard defines how the switches are mounted and the switching characteristics for fixed side rotary lever, top pin plunger and top roller plunger.

Switching options:

SPDT Single Pole, Double Throw, Snap action contacts (1NC/1NO)

DPDT Double Pole, Double Throw Snap action contacts (2NC/2NO)

SL1 Series Compact Limit Switches

The SL1 Series compact limit switches are sealed, sensitive and have a long life. The compact size makes them suitable for the total miniaturization of machinery or equipment.

Mechanical life:	10 million
Sealing:	IP 67, NEMA 3, 4, 13
Operating temperature:	-10 °C to 70 °C (14 °F to 160 °F)
Approvals:	UL, CSA, CE
Termination:	Cable gland
Operating force max. (OF):	11,76 N (2.64 lb)
Pretravel max. (PT):	1,5 mm (0.060 in)
Overtravel min. (OT):	3,0 mm (0.118 in)

14CE/914CE Series Miniature Enclosed Switches

Actuators

The 14CE/914CE Series offers a miniature, rugged, compact, pre-wired switch which has proved itself successful and gained wide market acceptance. The entire range of 14CE and 914CE switches has been approved to meet the requirements of the Low Voltage directive and is therefore CE marked.

CE switches have different degrees of protection from IP66 to IP68 for the fully booted head styles. The cable entry is fully potted using a special compound to ensure that ingress is virtually impossible.

Mechanical life:		10 million
Sealing:		IP66, IP67, IP68
Operating temperature:	14CE	NEMA 1, 2, 3, 3R, 4, 6, 6P, 12 (boot seal), 13
	914CE	0 °C to 70 °C (32 °F to 158 °F)
Approvals:	14CE	0 °C to 105 °C (32 °F to 221 °F)
	914CE	CE
Operating force (OF):		11,8 N (2,65 lb) max.
Pretravel (PT):		1,8 mm (0,71 in) max.
Overtravel (OT):		3,0 mm (0,118 in) min.
Differential travel (DT):		0,1mm (0,004 in) max.
Contact/Rating:	(9)14CE* -*	Silver A
	(9)14CE* -*G	Gold B
	(9)14CE* -Q, -AQ, -AQ1	Silver C
Connection:		Harmonised GENELEC 4 x 0,75 mm ² cable (14CE)
		SJTO 4 x 0,75 mm ² (18 AWG) cable (914CE)
		Connector (dc), 4 pin male, M12 thread (-Q)
		Connector (ac), 4 pin male, ½ in x 20 thread (-Q1)
		Single Pole, Double Throw
		Snap action contacts (1NC/1NO)
Switching options:		SPDT

24CE/924CE Series Miniature Safety Electromechanical Switches

For position sensing and switching applications requiring direct acting, positive opening contacts the 24CE and 924CE ranges are ideal. They have been tested and approved to meet the requirements of the Low Voltage directive and positive opening safety contacts per IEC/EN 60947-5-1-3. The devices are CE marked. The red colour clearly differentiates this safety component in the application. The 924CE range also has UL and CSA approval.

It is possible for the end user to enhance the safety level of these switches from Category 1 on their own to Categories 2, 3 or 4 when the switches are used in conjunction with our wide range of FF-SR safety relays to form a safety system.

Typical applications for these switches would use the roller plunger 24CE2- or 24CE3- style in conjunction with cams on doors with hinges; or our fixed side rotary 24CE16- style for detection of sliding doors. Also available are a range of panel mounting or top mounting versions to ensure that small space or difficult mounting can be simply achieved.

Several contact arrangements are available.

- Mechanical life:** 10 million
- Sealing:** standard type: IP66; with boot seal type: IP67
- Operating temperature:** 24CE 0 °C to 70 °C (32 °F to 158 °F)
924CE Low temperature: -40 °C (-40 °F)
24CE 0 °C to 105 °C (32 °F to 221 °F)
- Approvals:** 24CE CE
924CE AC15 B300
DC13 R300
CSA, CE
per UL file #E41859, 10 A 250 Vac; 1/3 Hp 125-250 Vac
AC15 B300

LS Series Compact Limit Switches

LS Series compact limit switches are carefully designed for accurate repeatability under the most stringent conditions. Compact size and field adjustable features greatly extend the flexibility of these switches. Heads may be positioned at 90° increments. Side rotary models can be adjusted for clockwise and/or counter-clockwise operation. Actuators can be set and locked in any position through 360°.

The rugged housings and actuator heads are constructed from cast aluminium, capable of withstanding physical abuse. Protection against oil, water and dust is achieved by O-ring seals on the actuator shaft; a ring seal between head and body; and a seated compression seal between cover and case.

The LS fits in many places too small for any other fully adjustable limit switch.

** Resistive rating
⁽¹⁾ Designed for use with inductive loads such as relays, contactors, motors and solenoids. Honeywell does *not* recommend the use of silver cadmium oxide switch contacts in non-arcing loads. Non-arcing loads are generally loads less than 12 volts and/or 0.5 amp.

BF Series Plastic Enclosed Basic Switches

BF Series Plastic Enclosed Basic Switches are available with a wide variety of actuators, and are designed for easy mounting and wiring. BF switches are designed to allow mounting with the cover either towards or away from the mounting surface.

Switches with lever type actuators are adjustable in two directions. The entire actuator can be rotated around its mounting bushing, and the angle of the lever can also be changed.

BZE/DTE Series Compact Enclosed Switches

The BZE/DTE Series general purpose enclosed limit switches offer precision operation and sturdy actuation in a compact but rugged aluminium housing. The large wiring enclosure means that the user can get access to wire the device simply. The switch incorporates high repeatability of the switch point early in the travel of the switch. This is achieved through a very tolerant over-travel mechanism which ensures that application drift will not affect long term accuracy of the switch.

Conduit: ½ in - 14 NPT
Sealing: E6 NEMA 1
 V6 NEMA 1, 3
Operating temperature: Standard -32 °C to 71 °C (-25 °F to 160 °F)

D	UL/CSA Rating:	1 A - 125 Vac

E6/V6

E6 (side mount) and V6 (flange mount) switches are offered with or without actuator seal boots. Both have a combination insulator/ seal cemented inside the bottom enclosure. Lead washers are used to seal the mounting holes on side mount switches. All side mount switches are installed with #6 screws, except the BZE6-2RN7 (#8 screws). Removal of the bottom enclosure exposes the terminals for easy wiring.

BZE/DTE Series E6/V6 Maintained contact (reset) switches

The switches shown below provide maintained contact after the operating force on either top or bottom plunger is released.

Note: The top plungers on these switches provide more accurate and uniform operation than the "reset" plungers and should be used when closely held operating characteristics are required.

BAF/DTF Series High Capacity Enclosed Switches

Approvals: UL, CSA
Sealing: NEMA 1, 3, 4, 13
Operating temperature: -2RQ9 NEMA 1
 -32 °C to 71 °C (-25 °F to 160 °F)
Conduit: ½ in - 14 NPT
Contacts: Silver
Electrical ratings: B UL/CSA Rating: 10 A, 125 or 250 Vac; 0.3 A, 125 Vdc; 0.15 A, 250 Vdc.
 D UL/CSA Rating: 20 A, 125, 250 or 480 Vac; 1 Hp, 125 Vac; 2 Hp, 250 Vac; ½ A, 125 Vdc; ¼ A, 250 Vdc; Lamp Load - 10 A, 125 Vac.

Switching options:
 D SPDT Single Pole, Double Throw Snap action contacts (1NC/1NO)
 B DPDT Double Pole, Double Throw Snap action contacts (2NC/2NO)

The BAF/DTF Series is available with or without boot seals. The elastomer boot on sealed actuator versions protects the actuating mechanism and the internal basic switch from contamination. They are therefore suitable for wash-down applications. Both sealed and unsealed versions are available with the actuators on the right or left hand side.

The cover plate is removable to allow ease of wiring and switch replacement without having to dismount the housing.

The BAF/DTF Series is suitable for use in packaging equipment, farm machinery, conveyors, overhead cranes and hoists.

HDLS Series Heavy Duty Limit Switches

The HDLS Series Heavy Duty Limit Switches offer a wide choice of mounting and actuator options. Housed in a rugged, die-cast zinc body which is epoxy coated for protection, they are perfectly suited to special applications in harsh duty environments where conventional limit switches may not be used. Versatile and full featured, they are designed for long life.

Listings referenced in this section are mainly standard. Low temperature and fluorocarbon (FC, high temperature) construction is available in all forms of HDLS limit switches. For temperature ranges see table opposite. Also available are factory sealed, pre-wired switches.

Low temperature switches have fluorosilicone diaphragm, shaft seals and external boot seal (where applicable) plus a low temperature lubricant. If prewired with cable, temperature limits are -10 °C (14 °F) flex and -30 °C (22 °F) no flex.

To order a low temperature version insert the additional letters **Y** and **B** as in the following example:
LSA1A - standard side rotary plug-in switch
LSYAB1A - low temperature version.

Completely fluorocarbon (FC) sealed, high temperature, chemical resistance switches have a full FC body gasket covering the switch cavity. Rotary types have an extra FC seal on the operating shaft, while plunger versions have FC boot seals. They are for use in applications where the environment includes fire-resistant synthetic fluids. The additional FC seals also promote longer operating life for rotary actuated HDLS switches in applications where the temperatures are normally -12 °C to 121 °C (10 °F to 250 °F). If prewired with cable, temperature limits are 105 °C (221 °F) dry and 60 °C (140 °F) wet.

To order a fluorocarbon (FC) sealed switch insert the additional letters **Y** and **C** as in the following example:

LSA1A - standard side rotary plug-in switch
LSYAC1A - completely FC sealed version.

Factory sealed, pre-wired limit switches have the entry area completely sealed and are available with 6 ft (1.83 m), ST00W-A cable or 4, 5 or 9-pin connectors. NEMA ratings are, for cable version 1, 4, 6, 6P, 12, for connector version 1, 4, 6, 6P, 12, 13.

To order a factory sealed switch add the appropriate letter:

Circuitry	Cable	½ in Connector (available with ½ in conduit tap only)
SPDT	C	A (4 pin mini) B (5 pin mini) DD (4 pin micro)
DPDT	M (¾ in only)	R (9 pin)

Example:

LSA1AC - LSA1A with 6 ft of 5 conductor ST00W-A cable
LSJ2BM-7N - LSJ2B-7N with 6 ft of 9 conductor ST00W-A cable
LSA1AB - LSA1A with 5 pin receptable
LSA1ADD - 4 pin micro-change connector

Electrical ratings

10 amps continuous carry. Circuits on any one pole must be the same polarity.

*For HDLS application wherein the upper temperature limit is normally above 200 °F (93 °C), much longer switch life can be obtained by using

completely fluorocarbon-sealed switches rather than the standard HDLS.

SIDE ROTARY

Double-pole

Side rotary, momentary action

The momentary action listings shown are factory assembled with the head adjusted for both clockwise (CW) and counterclockwise (CCW) operation. The shaft of side rotary heads face the front (label side of switch).

Actuation direction

A simple field adjustment converts switch to accept actuation from one or both directions. For ready reference, adjustment instructions are cast into the internal lid of side rotary heads.

Head orientation

The head may be orientated and locked in any of four 90° positions.

Momentary action switches can be factory assembled for operation in one direction only and/or with the shaft facing the rear or either side. Contact Honeywell for more information.

Plunger actuated switches

HDLS plunger actuated switches are available with either top or side facing plungers for application flexibility. Switches with adjustable plungers simplify installation. They have a hex setscrew and locknut on the plunger, providing an adjustment range of 0.25 in (6.35 mm).

Assembled conditions

The listing shown are factory assembled with side plungers facing front (label side of switch); rollers on side plungers are in horizontal position. Rollers on top plunger switches are parallel to mounting surface. Other options are available. Contact Honeywell for more information.

Fully potted HDLS

Fully potted HDLS are designed to meet the demanding requirements of NEMA 1, 3, 4, 6, 6P and 13 for wet applications where the integrity of the conduit seal must be assured. These switches are the same as the standard HDLS non plug in limit switch except that the conduit entrance is factory sealed to simplify installation and ensure integrity of the conduit seal. They are epoxy filled and supplied with six feet of 5 or 9 conductor 16 gauge STO cable. Fully potted HDLS are built with all Fluorocarbon seals. Sealing exceeds Nema 6P. Low temperature versions are available, see page 4 for temperature range and how to order.

Approvals:

Connector Cable NEMA 1, 4, 6, 6P, 12, 13
 Cable NEMA 1, 4, 6, 6P, 12

Stainless steel HDLS

HDLS stainless steel switches are designed for use in highly corrosive environments such as petrochemical plants, food processing plants, shipboard and dockside locations. The type 316 cast stainless steel body is designed to minimise crevices where food particles could become trapped. The actuator, operating head and screws are also stainless steel. All seals are Fluorocarbon to provide excellent chemical resistance and to withstand operating temperatures up to 121 °C (250 °F) and pressurised steam cleaning.

Blank page

Explosion proof switches

Honeywell explosion proof switches are designed specifically for use in hazardous locations. To comply with explosion proof requirements, the flame path within the housing is designed to contain and cool the escaping hot gases that otherwise could cause an explosion outside the switch.

Switches are available with UL/CSA for North America. See information below and product pages for details. In Europe, the usage is governed under the European Directive on Equipment and Protective Systems Intended for Use in Potentially Explosive Atmospheres (94/9/EC) commonly referred to as the ATEX Directive.

The BX, CX and GXE product families comply to the following ATEX Directive: EExd IIC T6 Category II 2 GD

The 14CE100 product family complies to the following ATEX Directive: EExd IIC T6 Category II 2 G

NEMA TYPE 7, CLASS I FLAMMABLE GASES OR VAPORS

Type 7 enclosures are for use indoors in locations classified as Class I, Groups B, C, or D by the National Electrical Code.

Group B — (only switches so noted in the order guides include this listing). Atmospheres containing hydrogen or manufactured gas.

Group C — atmospheres containing diethyl ether, ethylene, or cyclopropane.

Group D — Atmospheres containing gasoline, hexane, butane, naphtha, propane, acetone, toluene or isoprene.

Division 1

Locations in which hazardous agents are present under normal operating conditions.

Division 2

Locations in which hazardous agents may be present only in case of accidental rupture or breakdown.

All Honeywell listings covered in Division 1 are also covered in the same groups in Division 2.

NEMA TYPE 9, CLASS II COMBUSTIBLE DUSTS

Type 9 enclosures are for use in indoor locations classified as Class II, Groups E, F or G, as defined in the National Electrical Code.

Group E — Atmospheres containing metal dust.

Group F — Atmospheres containing carbon black, coal dust or coke dust.

Group G — Atmospheres containing flour, starch or grain dust.

ATEX EExd

EExd	II	c	T6	Category II 2	G	D
Flameproof enclosure	Places with potentially explosive atmospheres, other than mines susceptible to fire damp	Atmosphere may contain gases from groups A, B or C from table in EN50014, Annex A	Maximum surface temperature of 85 °C (185 °F)	Areas in which an explosion proof atmosphere is likely to occur	Gas could be present	Dust could be present

The 14CE100 Series has been designed for use in explosive environments. It is approved to meet the requirements of the Low Voltage directive and is CE marked. The wired construction allows for ease of installation where space is at a premium and external operating conditions can be difficult.

GXE Series Explosion Proof Limit Switches

Actuators

The GXE Series explosion proof limit switches are designed specifically for use in hazardous applications. The GXE enclosure is fully potted and has sealing protection of IP66/67 as per IEC/EN 60529. The entire GXE Series complies with the European Directive on Equipment and Protective Systems Intended for Use in Potentially Explosive Atmospheres (94/9/EC) commonly referred to as the ATEX Directive.

Mechanical life: 2 million
Sealing: IP66/67, EN 60529

The EX Series features the smallest UL listed housings available for use in hazardous locations. Flame paths within the housing cool exploding gases below the kindling temperature before they reach the explosive gases surrounding the housing.

Options available include single or double conduit connection. These switches are not sealed against liquids and should not be used where there will be liquid splash. If a weather sealed explosion proof switch is required please select from the CX or LSX/BX series.

CX Series Weather Sealed Explosion Proof Switches

Actuators

CX switches, as are the LSX/BX Series, are built especially for outdoor use in hazardous atmospheres. These enclosures are constructed to withstand the pressure of an internal explosion.

O-ring seals make the enclosure weatherproof but are outside of required flame paths so explosion proof requirements are maintained.

As factory assembled, all basic switches operate on clockwise and counterclockwise rotation. The actuating mechanism can be field adjusted for CW or CCW operation only.

Analog output, 4 mA to 20 mA, is available.

Basic switches operate nearly simultaneously in multiple switch devices.

Shafts of devices without shaft restoring force can be rotated through 360°.

Sealing:

Bronze housing for use in corrosive environments

80CX switches have rugged bronze housings which are resistant to salt water and other corrosive environments. They comply with the NEMA 4X requirement for protection against corrosion, in addition to NEMA enclosure standards met by other CX switches. O-ring seals make the enclosure weather-proof, but are outside of required flame paths, maintaining explosion-proof requirements.

LSX/BX Series weather sealed, explosion proof limit switches are for use either indoor or outdoors in hazardous atmospheres. They are completely sealed and designed for use in explosive gas/dust environments.

LSX/BX products meet the sealing standards of NEMA 1, 3, 4, 6, 7, 9 and 13. BX products are also sealed to IP67 standard and are ATEX approved (see specifications below).

All heads are field adjustable at 90° increments. Heads with side rotary actuators can be adjusted for clockwise and counter clockwise operation.

Blank page

Levers

Separate levers must be ordered with side rotary types. The table provides a cross reference between product families and the lever order/reference numbers. The following pages describe the levers. Illustrations are for reference only. Exact mounting drawings and dimensions are available from your local sales office or from the website below.

Levers lock in any position, 360° around the shaft. Rollers may be mounted on the front or back of the lever.

All levers are supplied with cap screws.

Explosion proof switches

Because of explosion proof requirements, only nylon rollers or other non sparking material should be selected. BX/LSX, CX and EX plunger and cat whisker types are of non sparking material. **Do not mix or substitute.**

Specification (unless stated otherwise)

Lever radius/length:	1.5 in (38,1 mm)
Roller Diameter:	0.75 in (19,1 mm)
Roller Width:	0.25 in (6,35 mm)
-EX	0.312 in (7,92 mm)

Note:

Not all levers are compatible with all switches

SZR-MY Series Power Relay

SZR-MY Series general-purpose power relays are designed for a wide range of applications including power, as well as logic control, for factory machines and control panels.

SZR-MY Series relays have a small package design for multiple application needs. Relays are available in two configurations: DPDT with a 5 A load and 4PDT with a 3 A load. One standard and three options are available: LED indicator, internal surge protection diode, and LED indicator/diode protection.

- Current rating (SZR-MY2):** 5 A
- Current rating (SZR-MY4):** 3 A
- Contact resistance:** 50 mOhm max.
- Contact material:** Fine silver
- Agency approvals:** UL, CE, CSA
- Operate time:** 20 ms max.
- Release time:** 20 ms max.
- Ambient temperature:** -25 °C to 75 °C (-13 °F to 167 °F)
- Ambient humidity:** 45% RH to 85% RH
- Switching options:** DPDT, 4PDT

Electromechanical Safety Switches

Honeywell is a worldwide leader in advanced switching and sensing technology - especially in the area of industrial safety. We offer both electromechanical safety switches and electronic safety sensors as well as safety control modules for safety applications in all categories of risk. Customers can count on our diverse product line to meet all of their machine safety applications.

Honeywell products meet or exceed European machine safety standards and have been approved (CE, BG, INRS) for use in Europe for more than 25 years. As North America moves toward harmonizing with global standards, machine builders and users can confidently turn to Honeywell for compliant machine safety solutions. Our products are designed to meet all applicable OSHA and ANSI standards.

Refer to pages 6 and 7 for more information about degrees of protection and electrical ratings.

Protective Guarding

Protective guarding around a dangerous machine can be achieved with tamper-resistant safety switches. Safety switches incorporate positive opening operation such that even a welded contact will be mechanically broken and a stop signaled. These switches monitor the position of moveable guards and doors, which are used to safeguard access to equipment and provide protection from ejected pieces, chips, projectiles or oil. These safeguards require a relatively low investment and provide reliable protection if they are regularly checked and maintained.

Cable Pull Switches

Cable-pull limit switches serve as a readily accessible means of emergency stop for applications. These cable-pull devices are visible, accessible and easy to use and they immediately open the emergency stop circuit when activated.

GKM Series Global Miniature Safety Key Operated Switch

Used alone as Category 1 safety components or, in conjunction with other safety switches and our complete range of safety relays, it is possible to construct comprehensive protection schemes with Category 2, 3 or 4 compliance.

The preleaded versions allow rapid fit, easy cable routing and function testing which cut costs dramatically in OEM applications. Simple upgrade guarding solution for End User applications.

Low energy basic switches are rated as follows:

Operating Voltage U_e 1 Vdc to 60 Vdc or 1 Vac to 125 Vac
 Operating Current I_e 1 mA to 50 mA

Example of catalog listing using a low energy basic switch - GKMA19

Mechanical life: > 1 million
Sealing: IP66/67, EN 60529, NEMA 1, 12, 13
Operating temperature: -25 °C to 85 °C (-13 °F to 185 °F)
Approvals: CE, UL, CSA
 AC15 B300
 DC13 Q300

Contacts: Low energy Silver Gold plated
 Slow action contacts

Switching options:

GSS Series Hinge Mount Safety Limit Switch

The Hinge Mount Safety Limit Switch is designed for use on machine access doors as an alternative solution to key operated interlocks and safety limit switches. When the access door is opened, a follower pin (not supplied) slides down the slot in the actuator lever, forcing the actuator lever to rotate and positively open the NC safety circuit to shut off the machine. Closing the access door rotates the actuator lever to the reset position, closing the NC safety contacts.

The Hinge Mount Safety Limit Switch minimizes alignment problems because it may be offset-mounted from the hinge point of the door. The tamper-resistant design and the positive opening contacts provide a higher level of safety than the conventional spring-driven limit switches often used to monitor door position.

Low Energy Switching

In today's demanding age of low energy controls, electromechanical switches are frequently used to interface directly with safety relays, PLCs and other low energy devices. To accommodate this requirement GSS offers a new gold plated contact version of the standard basic switch. This improves reliability of switching at low currents and voltages by protecting the contact surfaces from contamination during operation or storage prior to use.

Standard silver contacts have a disadvantage in that the contact surface may tarnish under certain environmental conditions, e.g. in the presence of moisture.

Low energy basic switches are rated as follows:

Operating Voltage U_e 1 Vdc to 60 Vdc or 1 Vac to 125 Vac

Operating Current I_e 1 mA to 50 mA

Example of catalog listing using a low energy basic switch - GSCB33S2.

Switching options:

GSC/D

Snap action contacts (1NC/1NO)

Slow action contacts (1NC/1NO) BBM

Slow action contacts (2NC)

GSE

Slow action contacts (4NC)

Slow action contacts (2NC/2NO) BBM

GK Series Dual Entry Key Operated Safety Interlock Switch

The GK Series is designed specifically for use on machines where key removal brings the machine to an immediate safe condition. It provides enhanced operator safety when added to hinged or sliding guard doors, screens and protective covers on enclosures. The GK Series is especially well suited for large door applications, typically in the automotive plant floor environment. Its heavy duty construction withstands harsh industrial environments where rugged, long-term durability is required.

Nearly 1000 options are available in a simple to understand part number tree.

A safety lockout device is also available for use with the GK Series. The lockout device (GKZL2) is specifically designed to prevent a key from being inserted either manually, or by the access door being closed while maintenance personnel are working on the machine. When inserted, the lockout device can accommodate up to four padlocks to prevent unauthorised removal of the device.

GKL/GKR Series Dual Entry Solenoid Key Operated Safety Interlock Switch

The GKR (head to the right) and GKL (head to the left) products offer the user an unrivalled range of standard options.

The GKR/GKL product is a key actuated device incorporating a key trapping mechanism. The switch is used on machinery where instant stop and access to the machinery is either impossible (due to the momentum of the machine) or impractical (due to tool or machine damage or scrapped product if the current machine cycle is interrupted).

The switch incorporates an optional manual override feature which allows removal of the key for emergency access.

Over 1000 options are available in a simple to understand part number tree.

A safety lockout device is also available for use with the GKR/GKL Series. The lockout device (GKZL2) is specifically designed to prevent a key from being inserted either manually, or by the access door being closed while maintenance personnel are working on the machine. When inserted, the lockout device can accommodate up to four padlocks to prevent unauthorised removal of the device.

CPS Series Cable Pull Safety Switch

CPS Series Cable Pull Safety Switches provide a readily accessible emergency stop signal. This is a cost-effective means compared to using multiple emergency stop push-buttons. (Cable Pull Safety Switches are not, however, to be used as a means of personnel safeguarding. They may be used to prevent further injury or damage to equipment when used for emergency stop signaling.)

The CPS Series Cable Pull Safety switch is designed to provide emergency stop protection for exposed conveyor and assembly lines. The internal mechanism latches on both slackened cable (push) and pulled cable. This capability also enhances productivity by eliminating nuisance stops due to variations in temperature, stretch of cable over time, and other application variables.

The 1CPS is intended for use in applications where the cable span is 76 m (250 ft) or shorter. It is an economical solution for shorter runs or zone protection typical to automated systems. The 2CPS series is intended for use in very long cable runs of 152 m (500 ft) or shorter, such as long conveyor lines found in warehouses.

The CPS complies with: Low Voltage Directive 73/23/EEC, as amended by directive 93/68/EEC; Machinery Directive 98/37/EEC only as the directives relate to the components being used in a safety function; IEC/EN 60947-1; IEC/EN 60947-5-1; IEC/EN 60947-5-5.

Linear and Rotary Position

Position sensors respond to the movement or location of a target, such as a molding press slide or a pulley shaft, by producing either a digital or an analogue output correlated to its location. Honeywell position sensors include digital and analogue Hall-effect position sensors, magnetoresistive digital sensors and potentiometric rotary and linear sensors. Sensors are directly compatible with other electronic circuits for application flexibility.

With the combined capabilities of three well-known brand names - Data Instruments, Clarostat, Electro and New England Instruments - Honeywell the group continuously strives to remain at the forefront of position sensing technology. In this catalogue we present our range of Linear and Rotary Position transducers and Torque Watch gauges, all suitable for use in industrial environments.

Linear and Rotary Position Transducers

Honeywell Sensing and Control manufactures a variety of potentiometric position sensors. The sensors use a tried and true potentiometric technology originally developed for military applications and more recently applied to industrial markets. MystR® conductive plastic potentiometric sensors are long-life units designed for rugged industrial applications. The proprietary MystR® conductive plastic has an extensive temperature range, infinite resolution and provides absolute position measurement on power-up. Intermediate signal conditioning is not required for normal ratio-metric position sensing. Very small stroke units (5 mm [0.2 in]) and units required to withstand exposure to harsh chemicals or work immersed in many different oils are available. If there is heavy hose down or spray from oil or water, a water resistant or waterproof potentiometer such as the AQ series should be used.

Linear products have CE approval, Intrinsically Safe For Class I, II, III, Division 1, Groups A, B, C, D, E, F, G With Enty. Vmax: 30 Vdc, Imax: 100 mA, Ci: 0.0 micro F, Li: 0.0 mH, T4A @ 105 °C Ambient.

LFII Series Longfellow II linear position transducer

The new Longfellow II incorporates design innovations to increase transducer life and provide greater resistance to vibration, while providing a smooth high-quality signal for demanding factory control applications. It has a solid stainless steel shaft, longer front-end bearings, a vibration-free damped element, a spring-loaded ball joint and a high precision precious metal wiper. Carrier guides are extruded the full length of the housing to ensure smooth operation even under severe side load conditions.

The newly designed internal components provide improvements based on worldwide testing and field experience.

DR Series

Durastar rodless linear position transducer

The DuraStar rodless linear position transducer is the longest lasting factory-rugged potentiometer. It allows large misalignment of shaft and housing, while providing whisper-quiet operation and smooth, clean signal output. MystR® provides the DuraStar excellent durability, especially in dither operation which is so often the determining factor in a potentiometer's life. It is an excellent replacement unit to reduce maintenance operations.

The rodless side-sealed DuraStar can also be used to replace a rodded potentiometer in contaminated applications to improve performance while providing long life.

Operating temperature:	-65 °C to 105 °C (-85 °F to 221 °F)
Supply voltage (max.):	75 Vdc
Linearity:	± 0.1 %
Starting force (max.):	0,45 kg (1.0 lb)
Backlash (max.):	0,025 mm (0.001 in)
Shaft:	M5x0.8 metric thread
Termination:	Connector, DIN 43560
Mechanical travel:	= Electrical travel + 5,0 mm (0.2 in)

SLF Series

Short Longfellow linear position transducer

The Short Longfellow is frequently used for measuring linear position or displacement up to 6 inches (152,4 mm) on a wide variety of manufacturing and process equipment. The mechanical design of the unit's front bearing, anodized extruded aluminum housing, stainless steel shaft and precious metal wipers are suitable for a factory's harsh environment.

Based on the proprietary MystR[®] conductive plastic film, it provides a high resolution, absolute position measurement without external signal conditioners.

Operating temperature:	-65 °C to 105 °C (-85 °F to 221 °F)
Supply voltage (max.):	40 Vdc
Starting force (max.):	
Standard	0,45 kg (1.0 lb)
Water resistant	2,27 kg (5.0 lb)
Backlash (max.):	0,025 mm (0.001 in)

MLT Series

Linear position transducer, 3/8 in Diameter

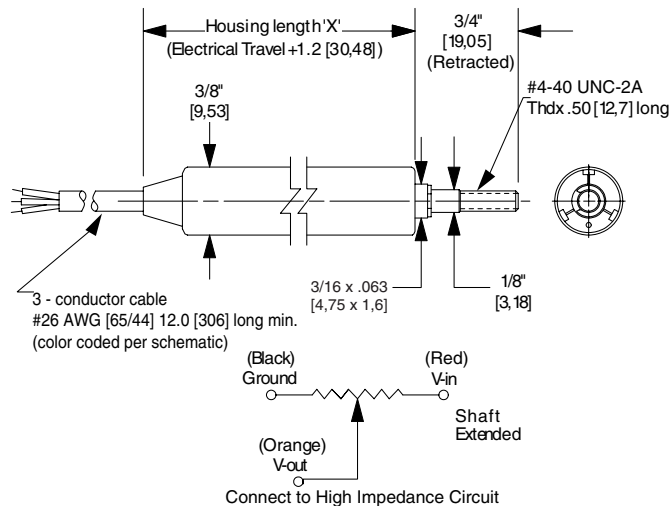

The MLT Series is 3/8 in diameter linear position transducer that is rugged enough to withstand hostile factory environments. Using a proprietary dual wiper, internal ball joint and the MystR® conductive plastic film the MLT provides a usable output at high vibration levels over long periods of time. MLT transducers use precious metal wipers to further enhance reliability.

The MLT's 3/8 inch diameter is among the smallest available and can be used to replace LVDT's in many applications.

Operating temperature:	-40 °C to 80 °C (-40 °F to 176 °F)

AQLT/AQMLT Series

Shaftless, waterproof linear position transducer

The AQLT and AQMLT are shaftless waterproof linear potentiometers designed to operate in wet/washdown and in-tank environments.

The AQ series features an external actuator magnetically coupled to a position feedback element. The magnetic actuator replaces the shaft, found in traditional linear transducers, and eliminates the need for additional stroke length mounting space.

Precious metal dual wipers, MystR® proprietary conductive plastic, and anodized aluminum housings provide long life and reliable operation in numerous applications.

Operating temperature:	-40 °C to 80 °C (-40 °F to 176 °F)
Supply voltage (max.):	30 Vdc

M22 Series Rotary position transducer

The M22 rotary potentiometer, available in servo and bushing mount, utilizes wear-resistant MystR® conductive plastic film combined with precious metal wipers to produce a quiet operating, low-noise, stable signal. Gold plated terminals eliminate soldering problems due to tarnish. The high-quality components are packaged in a cost-effective housing designed with an anodized aluminum face plate or nickel-plated brass bushing to handle assembly and operating loads. The integral internal terminations eliminate the need for internal wires which may break under vibration and thermal stress.

The M22 series rotary potentiometers are used in position-sensing applications which demand high reliability at low cost.

Operating temperature:		-40 °C to 85 °C (-40 °F to 185 °F)
Supply voltage (max.):		30 Vdc
Starting force (max.):	M22B	0.3 oz in (torque)

WPM Series

Rotary position transducer, servo mount

Available in servo mount styles, the WPM Series rotary transducer provides long life by utilizing the proprietary MystR[®] conductive plastic film, precious metal wipers and shielded ball bearings on the stainless steel shaft.

The MystR[®] film provides exceptionally long rotational and dither life without sacrificing microlinearity or resolution. The shielded ball bearings ensure long life even with side load conditions.

Operating temperature:	-55 °C to 125 °C (-67 °F to 257 °F)

Torque Watch Guages

The Torque Watch, an industry mainstay when an accurate indication of rotary force is necessary, is simple to use, requiring no special tools or setups. Available in three models they cover ranges from 0.003 to 200 inch-ounces. Attach the gauge to the device being measured, and simply rotate it, for a direct reading dial.

Protection against over-torque is provided by a stainless steel internal rotation stop. The low range 366 Series will prevent damage from over-torque up to three times the normal range, whilst the mid range 641 Series and the high range 940 Series will prevent damage up to twice the normal range.

Models are available in standard (ounce inch), metric (gram centimeter) and System International (Newton meter) measuring options.

366 Series Low range 0.003 - 0.60 oz in

The Series 366 Torque Watch accurately measures very low torque. Three miniature adapter chucks allow simple coupling to the device being measured.

OPTIONS

Standard

OUNCE INCHES	REFERENCE
0.06 to 0.6	366-0
0.01 to 0.1	366-2
0.003 to 0.03	366-3

Metric

1 to 7.5	366-2M
0.2 to 2	366-3M

651 Series Mid range 0.05 - 40.0 oz in

The Series 651 Torque Watch provides accurate measurement of low static torque. A 1/4 inch keyed chuck provides a simple means of coupling to the device under measurement.

OPTIONS

Standard

Clarostat Rotary Position Transducers

TH100 Series

The TH-100 Series puts Honeywell's proven variable-resistor technology to work in angle-management applications such as control-lever sensing and equipment position feedback. High performance and low cost make it attractive for a wide range of applications. Special electrical and mechanical configurations, including dual tracks, D-shape rotor holes, etc. are available on special order.

The device provides for angle measurements, has 152,4 mm (6.0 in) wire leads, a 6,35 mm (0.25 in) slotted thru hole and is sealed.

Power rating:	0.5 W max.
Element type:	Conductive plastic
Terminal type:	three 20 AWG
Shaft:	6,35 mm (0.25 in) thru hole with .105 w x .090 d slot
Body:	38,1 mm (1.5 in) x 45,72 mm (1.8 in)
Electrical taper:	Linear
Storage & operating temperature:	-40 °C to 120 °C (-40 °F to 248 °F)
Working voltage (max):	350 Vdc
Linearity:	± 5% standard; to ± 1% special
Total resistance:	10 K
Total resistance tolerance:	± 15%
Rotational cycles:	> 1 million

HRS100 Series, Hall-effect

The HRS100 provides angular position information for a variety of sensing and control applications in the automotive, marine, truck, off-road, industrial implementation, aerospace, and rail industries. The use of magnetically coupled information in place of a mechanical wiper assembly provides a long life, cost-effective solution for harsh environments that include temperature, vibration, dither, moisture and dirt.

This position sensor incorporates Hall-effect to provide a sensing device that will last for more than 50 million operations. The device is packaged in a metal housing with a 9,5 mm (0.375 in) diameter bushing and a 6,35 mm (0.25 in) diameter slotted shaft and solder lug terminals.

Terminal type:	Straight solder lug
Bushing:	9,52 mm (.375 in) FMS, includes C-ring
Shaft:	Slotted 6,32 mm ± 0,03 (0.249 in ± 0.001)
Body:	27,79 mm (1.094 in) Ø
Electrical taper:	Linear
Operating temperature:	-40 °C to 85 °C (-40 °F to 185 °F)
Supply voltage (max):	5 Vdc
Linearity:	± 2%
Rotational cycles:	10 million
Mechanical operating angle:	90°

Clarostat Rotary Potentiometers and Position Transducers

578 Series, Precision potentiometer

The 578 Series conductive plastic precision potentiometer puts Honeywell's proven variable resistor technology to work in a high performance, cost-effective device. With its compact size, rugged construction and advanced versatility, the 578 provides superior control for applications such as joy-stick controllers and position-sensing devices.

The model 578 features a 9,5 mm x 9,5 mm (0.375 in x 0.375 in) bushing, 6,35 mm x 19,05 mm (0.25 in x 0.75 in) slotted shaft, linear taper, and type A pc pins (please consult with the factory for custom OEM configurations).

Power rating:	0.5 W @ 70 °C (158 °F)
Element type:	Conductive plastic
Terminal type:	PC pin type A
Bushing:	9,52 mm (0.375 in) D x 9,52 mm (0.375 in) L
Shaft:	6,35 mm x 19,05 mm (0.25 in x 0.75 in) Slotted
Body:	22,86 mm (0.900 in) Ø
Electrical taper:	Linear
Operating temperature:	-40 °C to 100 °C (-40 °F to 212 °F)
Working voltage:	400 Vdc
Linearity:	1%
Total resistance tolerance:	± 10%
Revolutions:	5 million

Encoders

510 Series , Mechanical

The 510 Series controls are manually operated, rotary, mechanical encoders that provide a two-bit gray code for relative reference applications and a four-bit gray code for absolute electrical reference applications. The "L" channel leads the "R" channel by 90° electrically in the CW position. It features continuous electrical travel and has a rotational life of more than 100,000 shaft revolutions with a positive detent feel.

This series is small-sized, 21,08 mm² by 8,71 mm deep (0.83 in² x 0.343 in) long and commonly used in limited-space, panel-mounted applications where the need for costly, front-panel displays can be completely eliminated. Digital gray-code outputs eliminate the need for A/D converters.

Bushing: 9,52 mm (0.375 in) Ø x 6,35 mm (0.25 in) L
Shaft: Flatted, 6,35 mm (0.25 in) Ø x 19,05 mm (0.75 in) L
Body: 21,08 mm (0.830 in) square
Operating temperature: -40 °C to 105 °C (-40 °F to 221 °F)
Rotational cycles: 100,000

Output Table

Control Dimensions, Single Control

600 Series, Optical

The 600 Series controls are manually operated, rotary, optical encoders that output two square waves in quadrature at a rate of 128 pulse per channel per revolution as a standard with other resolutions down to 60 pulses available. The outputs are TTL compatible. PC terminals or cable leads are available.

Pulses per revolution: 128
Supply voltage: 5.0 V
Body: 34,93 mm (1.375 in) Ø
Shaft: 6,35 mm [0.25 in] dia by 22,23 mm [0.875] long
Bushing: 9,52 mm [0.375 in] dia by 9,52 mm [0.375 in] long
Operating temperature: -40 °C to 65 °C (-40 °F to 149 °F)
Revolutions: 10 million

Slotted Optical Switches

S-180 Series

The S-180 Series consists of a gallium arsenide IRED and silicon phototransistor mounted in a rigid one-piece polycarbonate housing. All electrical options are available with either PCB mount or 457,0 mm (18.0 in) minimum length wire termination (26 AWG type UL 1429)

Operating temperature:	-40 °C to 85 °C (-40 °F to 185 °F)
IRED continuous forward current:	50 mA
IRED peak forward current:	3 A
IRED reverse voltage:	3 V
IRED power dissipation:	100 mW
Sensor collector-emitter voltage:	30 V
Sensor emitter-collector voltage:	5 V
Sensor power dissipation:	100 mW

S-510 Series

The S-510 Series consists of a gallium arsenide IRED and silicon phototransistor mounted in a small injection-molded housing. An IR-opaque housing is offered for applications where high levels of ambient infrared radiation may be present and an IR-transparent housing for applications requiring protection from dust and dirt in the apertures. This series is also available with 305,0 mm (12.0 in) minimum length flexible wire leads.

Operating temperature:	-40 °C to 85 °C (-40 °F to 185 °F)
IRED continuous forward current:	50 mA
IRED peak forward current:	3 A
IRED reverse voltage:	3 V
IRED power dissipation:	100 mW
Sensor collector-emitter voltage:	30 V
Sensor emitter-collector voltage:	5 V
Sensor power dissipation:	100 mW

Slotted Optical Switches (continued)

S-860/870 Series

The S-860/870 family of optical switches offers the designer the most flexible semi-custom specification available in commercial optoelectronics. Electrical, optical and mechanical parameters may be specified allowing the use of this standard product in many applications that would otherwise have to be custom designed.

Operating temperature:	-25 °C to 85 °C (-13 °F to 185 °F)

S-800W Series, Wide gap

The S-800W Series of wide gap slotted switches consists of a gallium arsenide IRED and silicon phototransistor in an injection-molded housing. The output current range options allow the design engineer the flexibility to choose from three current minimums to best solve application requirements.

Operating temperature:	-40 °C to 80 °C (-40 °F to 176 °F)
IRED continuous forward current:	50 mA
IRED peak forward current:	3 A
IRED reverse voltage:	3 V
IRED power dissipation:	100 mW
Sensor collector-emitter voltage:	30 V
Sensor emitter-collector voltage:	5 V
Sensor power dissipation:	100 mW

Ultrasonic Distance Sensors

Ultrasonic sensing systems offer no-touch distance measurements to an accuracy of 1 mm through dust, smoke and vapour, in areas of high noise level, and with all types of target materials, shapes and colours, with sensing ranges from 100 mm up to 6000 mm.

High performance no-touch position sensing

Increased reliability, no contamination. Honeywell ultrasonic sensors operate by exciting an acoustic transducer with voltage pulses, causing the transducer to vibrate ultrasonically. These oscillations are directed at a target and by measuring the time for the echo to return to the transducer, the distance may be calculated. This measurement technique in no way interferes with the object - it does not contaminate the target, nor does it affect the position. And being no-touch, there are no mechanical linkages to wear out.

Ultrasonic

Factory noise does not affect operation because the operating frequency is well above the frequency of ambient sound. And because sound is used, air pressure, humidity and airborne contamination have little effect on accuracy; target shape, material and colour are also not critical.

Working method

The sensors work with an ultrasonic transducer used for both transmitting and receiving. In each cycle, ultrasonic pulses will be transmitted. The pulses are then reflected back from the target, and received by the sensor. By means of the temperature compensated measurement of the elapsed time of the acoustic signal, the target distance is determined, with a high degree of accuracy. The resulting measurement can be output either as an analogue or a digital signal.

Figure 1 shows the elapsed time of the acoustic pulse. The diagram shows how the pulse travels from the transducer to the target, is reflected at time $T/2$, and reaches the transducer at time T . Below is a diagram of the voltage at the ultrasonic transducer. Elapsed time T is directly proportional to object distance a . $a = cT/2$, where c is the velocity of sound.

Application criteria

The maximum sensing range depends on a number of factors such as target shape, surface, inclination to the beam axis, surface composition and environmental influences. The range values included in this catalogue are based on a target made of flat, sound-reflecting material at 25°C and still air, placed vertical to the beam axis.

Reflective properties

Almost all materials and targets reflect sound, and can therefore be detected. Only sound-absorbing materials such as cotton wool, or foam rubber are either difficult or impossible to detect. Certain materials, such as textiles, weaken the ultrasonic signals, as a result of which the maximum sensing distance is less than half of the nominal value.

Target shape and surface

All object shapes and surfaces can be measured using ultrasonic sensors, up to the maximum distance at which a sufficient echo reaches the sensor. Cylindrical, conical and small objects reduce the measuring range.

Inclination to beam angle

If a smooth, flat target is inclined at more than half of the nominal beam angle to the normal beam axis (e.g. 5°), the echo is deflected so far that, under certain conditions, no signal is received by the sensor (see Figure 2 overleaf). At shorter target distances, the target can be inclined up to the beam (e.g. 10°) from the beam axis. In the case of targets with a rough surface, the acoustic beam is reflected diffusely. The angle of inclination to the beam may, under certain circumstances, be up to 50°, but the maximum sensing distance is reduced.

Figure 2: Effect of target inclination on the measurement

Environmental influences

The velocity of sound in air is temperature-dependent, and increases at a rate of 0.18 %/°C. Honeywell ultrasonic distance sensors have their own temperature transducer, which adjusts both the clock frequency of the elapsed time counter and the carrier frequency. Major temperature fluctuations within the measuring path can, however, lead to sound dispersion and refraction, which disturb the measuring result and limit the stability of the measurement (Figure 3). Air streams, turbulence and air layers of different densities can, in certain conditions, attenuate or deflect the echo to such an extent that the sensor cannot detect it. On the other hand, air humidity and normal atmospheric air pressure fluctuations have virtually no influence on the measurements.

Figure 3: Effect of warm air turbulence on the measurement

Repeatability

All information concerning repeatability and hysteresis in this data sheet is valid for axial target movements (Figure 4). If a target approaches the sensor from a distance, the output switches at the set value \pm the given repeatability. If the target moves further away from the sensor, the output switches back into its original condition, at a distance which is equal to the sum of the setpoint and the given hysteresis \pm the repeatability. If a target moves laterally into the acoustic beam, the echo energy increases. If the measurement threshold of the sensor is reached, the output becomes active. This threshold depends on the target properties and its distance from the sensor. The position can only be determined experimentally.

Figure 4: Repeatability and hysteresis

Mutual interference

Despite pulse coding, if several sensors are used simultaneously in a single application, mutual interference can occur. This phenomenon will, however, only arise if, as a result of the inclination of the object, or the positioning of two sensors opposite one another, false echo signals can be received. By using the inhibitor input, maintaining minimum distances or restricting the beam angle with a focusing reflector, the problem can be almost entirely avoided.

Synchronisation

The majority of Honeywell ultrasonic distance sensors can be very easily synchronised by interconnecting the appropriate inputs or connecting them with an external synchronisation unit. The transmission of the acoustic pulses then occurs simultaneously. This makes it possible to use the sensors for applications in which the ultrasonic transducers are facing each other, while still avoiding mutual interference.

Protective measures

All sensors are protected against water and dust, according to the DIN standard IP 65. The transducer is coated with silicone rubber or epoxy, but it can be attacked by aggressive acid or caustic atmospheres. It is also necessary to ensure that the transducer face remains clear of liquid or solid deposits, which could limit the performance of the sensor. Drops of water may be deposited on the transducer surface, as a result of condensation. These could severely reduce the sensor range. Also because of the risk of icing up, and because sensors detect raindrops, the suitability of these sensors for outdoor use, despite the protective measures, is limited.

Electrical interference

All Honeywell ultrasonic sensors are protected against reverse polarity, short circuits, overloads and voltage spikes. Special protective circuitry makes the sensor almost entirely immune to electromagnetic and radio frequency interference. However, unstable measurements may arise if the sensor is placed in the vicinity of strong electrical fields. In such cases, the interconnection cables should be screened as far as possible, or separated from power cables. The use of regulated power supplies with mains filters, and limiting the maximum cable length to 50 metres can also offer possible solutions. All sensors are CE marked.

Alignment aid

The majority of Honeywell ultrasonic distance sensors have an LED, the output intensity of which is proportional to the ultrasonic echo received. The brighter the LED, the better aligned the sensor.

Please contact your nearest Honeywell office for details of other models available.

940/947 Series Compact, microprocessor controlled with internal temperature compensation

The new 940/947 Series is microprocessor controlled, can be set up quickly and are fitted with epoxy transducers. All the housings are sealed to IP67. The retroreflective versions allow detection of any kind of target without any dead zone. They work with a reflector target.

944 Series

Teach in, Analogue and 2 switching outputs

The new 944 series are microprocessor controlled and fully programmable by teach-in, with the simple pressing of a button. They offer analogue and two switching outputs through a standard M-12, 5-pin connector. All the models are IP67 with chemical-resistant body and epoxy face. Parameters are stored in non-volatile memory.

948 Series

Thru scan, 2 part

The 948 series perform presence measurement by using an ultrasonic beam. The 948 series is one of the smallest ultrasonic scan through devices in the world. It is especially suited for food and beverage applications, in particular bottle counting. Easy to install, the 948 series is suitable when space is at a premium.

Power supply

24 Vdc regulated power supply with output relay

The FF-MADB24RB is a small and versatile power supply usually used with the ultrasonic distance sensors, but may be used for any purpose. The power supply accepts 115 or 230 Vac input, is regulated to 24 Vdc. An internal SPDT relay may be triggered by NPN or PNP sensor output.

- Use with Series:** 940, 941, 942, 944, 946, 947
- Supply voltage:** 110 Vac or 220 to 240 Vac
- Circuit protection:** Short circuit
- Load current:** 150 mA max.
- LED indication:** Output relay
- Output type:** Relay SPDT 4 A/250 Vac, 3 A/60 Vdc
- Termination:** Screw
- Housing:** Plastic
- Housing type:** DIN rail mount, 2 holes Ø4,5 mm

REFERENCE
FF-MADB24RB

Beam Deflectors

Beam deflectors deflect the ultrasonic beam by 90° with virtually no signal loss. They are extremely useful in applications where space is limited; they allow the space required for the dead zone to be accommodated when setting up the sensor. The focusing beam deflector concentrates the ultrasonic beam, preventing unwanted reflection. It reduces the beam angle by approximately half.

The 43192871 series is made of stainless steel and may be used to fix the sensor. The 66195116-001, made of plastic, is available for M30 sensors only and cannot be used to fix the sensor.

M12 Connectors

OPTIONS

WITHOUT CABLES

M12 female, 5 pin, 5 screw terminals

The 66195044-001 is used for the 940, 941, 944, 947 series but may be used for any industrial sensor with standard M12 4 pin or 5 pin connector. The 66195044-001 connector is usually included with every sensor of the above series for connectorised models.

Use with Series: 940, 941, 944, 947
Housing: Plastic
Termination: Female M12
Number of pins: 5

REFERENCE
66195044-001

M12 female, 7 pin (942 Series)

The 66195074-001 is used for the ultrasonic distance sensor heads 942-A4M. It needs to be wired and soldered at the setup of the sensor. The 66195074-001 is included in every package of the 942 separate series (942 M3A...) but not in the spare ultrasonic heads (942-A4M..).

Use with Series: 942
Housing: Stainless Steel
Termination: Female Binder
Number of pins: 7

REFERENCE
66195074-001

WITH CABLES

M12 female, 5 pin, 2 metre cable (supplied with 946 Series)

The 55002 is a 5 pin, M12 female, metal, cable connector with 2 metres of cable attached. It is used with the 946 series but may be used for any industrial sensor with standard M12 4 pin or 5 pin connector. The 55002 cable connector is included with every sensor of the 946 series.

Use with Series: 940, 941, 944, 946, 947
Termination: Female M12
Number of pins: 5

REFERENCE
55002

Female, 8 pin, 2 metre cable (942 Series Compact)

The 55195126-001 is an 8 pin, female, metal, cable connector with 2 metres of cable attached. It used with the 942-A4N compact series. This device is useful but not necessary to setup the sensor, as every ultrasonic distance sensor 942-A4N is provided with a female connector without cable, with pins to solder.

Use with Series: 942
Housing: Stainless steel
Termination: Female Binder
Number of pins: 8

REFERENCE
55195126-001

Mounting Clamps

The 43178389 are plastic mounting clamps usually used with the ultrasonic distance sensors, but may be used with any M18 or M30 industrial sensors. The 43178389 feature 2-part plastic clamps with 2 M5x60 mm screws and nuts.

Programming**

OPTIONS

Software

The software package 55195101-101 contains software for programming 942 series separate and 55195101-102 for the 942 series compact . The software runs under Microsoft Windows™ versions 95™ and later.

Both packages contain an RS-232 cable (crossed) with 2 Sub-D 9 pin connectors, to connect to a PC. For 55195101-101 (942 Series separate), the other end of the cable connects to the control box 942-M0A.... by screw terminals. For 55195101-102 (942 Series compact), the other end of the cable connects to programming module 55000005-002.

For sensor series 942T... the programming cable gives easy access to the RS232 interface. The RS232 interface of the connector is directly connected to the Sub-D 9 pin connector, which allows easy connection to a PC. The Windows™ based software is easy to use and is supplied on a floppy disc with the programming cable.

942 Series Compact programming module

The 55000005-002 is a programming module for the 942-A4N series. Although this device is not necessary to setup the sensor, it is very useful as it provides quick connections for the RS-232 data link and the 'hold' switch.

It features 1 connector din Sub-D 9 pin, compatible with the cable included in the software package 55195101-102, 1 microswitch to put the sensor in 'hold' mode (necessary for the RS-232 link), 1 female and 1 male connector to be inserted between the customer's interface and the 942-A4N sensor.

The 55000005-002 may be used to programme any number of sensors and is not necessary in the usual run of the application. It is not compatible with 942 separate series.

Pressure Sensors

Honeywell has over 40 years of experience in the pressure transducer industry. We offer three pressure sensor measurement types - absolute, differential and gage - including vacuum gage and bidirectional types. A wide variety of pressure ranges, along with both amplified and unamplified versions, are available. Silicon-based versions in stainless steel and brass housings allow for use in harsh environmental conditions. A wide choice of mounting, package, and port configurations allows customers to choose from standard off-the-shelf designs.

Pressure sensors contain sensing elements that consist of four piezoresistors buried in the face of a thin, chemically-etched silicon diaphragm. A pressure change causes the diaphragm to flex, inducing a stress or strain in the diaphragm and the buried resistors. The resistor values change in proportion to the stress applied and produce an electrical output.

All Honeywell pressure sensors feature excellent repeatability, high accuracy and reliability under varying environmental conditions. In addition, they feature highly consistent operating characteristics from one sensor to the next and interchangeability without recalibration.

Stainless Steel versions

Honeywell also offers stainless steel pressure transducers that use bonded strain gauge technology with stainless steel media isolation, which eliminates the need for internal seals. Our stainless steel pressure transducers utilize bonded semiconductor strain gauge technology and are designed for demanding environments involving corrosive media. They are manufactured in a variety of packages that are widely used in medical equipment, compressors, hydraulic controls, transportation, agriculture, and refrigeration applications. Laser trimmed and tested, they are fully calibrated and temperature compensated to assure long-term reliability and performance. Stainless steel pressure transducers are fully compensated to eliminate known sources of errors.

Most of our transducers utilize the 'bonded strain gage' technology and are fully stainless steel media isolated, eliminating the need for internal elastomer seals. Our strain gage design is very resistant to the effects of shock, vibration and hostile environments. All of our transducers are fully compensated and tested against the appropriate specifications before shipment.

High Purity versions

High purity pressure sensors are focused on high-purity applications in the wafer-processing segment of the semiconductor industry. With ISO 9001 certified facilities and Class 10 cleanroom capability, Honeywell manufactures a full line of high purity pressure sensing and control products; each individually tested, inspected and certified to be in full compliance with the product specification.

The long life of the high-purity pressure sensors, coupled with long-term stability, greatly reduces or eliminates the need for zero and span adjustments.

AB/HP Series

The AB-High Performance pressure transducer is extremely accurate down to 0.25% span over a wide compensated temperature range. Both zero and full-scale temperature compensation are held to extremely narrow limits.

The transducer's body is made in a configuration permitting its use as a 'flush-mounted' device in situations where ease of cleaning or low-fluid volumes are major requirements. It may also be mounted in an adaptor for more conventional installations. Made from 316L or 15-5PH stainless steel, the AB/HP offer premium performance and flexibility at OEM prices.

Approvals: CE
Supply voltage: 5.0 Vdc, 6.0 Vdc max.
Signal conditioning: Unamplified compensation
Compensated temperature range: -1 °C to 71 °C (30 °F to 160 °F)
Port style: Flush Diaphragm
Output type: 0 mV to 100 mV

Eclipse Series

The Eclipse (EC) Series pressure transducers are designed for OEMs who require a reliable pressure transducer for industrial or heavy-duty applications. The model EC features our proven all-wetted stainless steel design, rugged packaging, internal signal amplification, and price which makes it an ideal sensor for a variety of applications. The model EC offers a broad selection of pressure ranges, output ranges, process connections, and electrical termination to meet the demanding requirements of customers worldwide.

- Approvals:** UL, CE
- Supply voltage:** 5.0 Vdc
- Signal conditioning:** Amplified compensated
- Operating temperature range:** -40 °C to 105 °C (-40 °F to 221 °F)
- Compensated temperature range:** -40 °C to 105 °C (-40 °F to 221 °F)

OPTIONS

The Model Eclipse is available with a mini DIN style electrical connector. This connection is a popular choice throughout the world and offers quick disconnection, but can be rigidly attached with the center screw fastener. The cable exit may be adjusted to any 90° direction.

MediaMate Series

The MEDIAMATE pressure transducer provides the user with the corrosion resistance of stainless steel at low OEM pricing. It is fully compensated and completely interchangeable without further calibration. The MEDIAMATE's wetted parts and outer case are made from 300 series stainless steel. It is now being used with a wide variety of corrosive medial such as Freon®, ammonia, water, and hydraulic fluids.

SA Series

The harsh duty SA pressure transducer has a water resistant, stainless steel case for complete protection from harsh environments. Internal hermetic sealing is used to provide measurement from absolute pressures (psia) or pressures referenced to a sealed chamber (psis). Underwriters Laboratories has approved the SA as a component in float and pressure-operated motor controllers (File #E93356).

Approvals: UL (*C1D products)
CE (*C1DE products)

Supply voltage: 9.0 Vdc to 24.0 Vdc

Signal conditioning: Amplified compensated

Operating temperature range: -55 °C to 105 °C (-48 °F to 221 °F)

Compensated temperature range: -1 °C to 85 °C (30 °F to 185 °F)

Port style: 1/8-27 NPT

Output type: 1 Vdc to 6 Vdc

Termination type: 0,91 m (3 ft) 3-conductor shielded cable

SR Series

The Model SR is intended for OEMs requiring a small pressure sensor with high pressure capability and superior corrosion resistance. Constructed of brazen assembly of 300 series stainless steels, the SR can tolerate a wide variety of corrosive media without risk of leaking. The SR's design provide high working pressures and high overload and burst pressures at no extra cost.

Supply voltage: 5.0 Vdc

Signal conditioning: Unamplified compensated

Operating temperature range: -40 °C to 100 °C (-40 °F to 212 °F)

Compensated temperature range: 0 °C to 75 °C (32 °F to 167 °F)

Port style: Capsule

Output type: 0 mV to 100 mV

Termination type: 4 - 22 AWG tinned Cu wires

PRESSURE RANGE (PSI)

Pressure Range (PSI)	* A			
	Bore Dia.	O-Ring	Sealing Depth**	Cavity Depth
15-500	.500 (12.70)	2-012	.21 (5.33)	.22 (5.58)
1000-1500	.375 (9.52)	2-010	.21 (5.33)	.22 (5.58)
2000	.375 (9.52)	2-010	.21 (5.33)	.22 (5.58)

CAUTION: Contact with sensing surface at bottom of cavity will affect accuracy and may cause damage. The O-ring groove on 2000 psi unit is wider to accommodate a backup ring behind the O-ring. All dimensions in inches (mm).

ML Series

The Model ML pressure transducers combines the latest in ASIC technology with our proven stainless steel design. This digitally compensated transducer offers an unparalleled value and performance combination making it the ideal pressure sensing solution for demanding automotive and industrial applications. Fully temperature compensated, calibrated, and amplified, the ML is available in 100 to 5,000 psis pressure ranges.

Approval: UL

13mm Series

These ICT 13 mm stainless steel devices are designed for high pressure applications that involve measurement of hostile media in harsh environments. This series uses ICT's proven piezoresistive semiconductor sensor chip in an oil-isolated housing with or without an integral ceramic for temperature compensation and calibration. This design has proven to be highly reliable, stable, and accurate.

SPT Series

The SPT stainless steel devices are designed for pressure applications that involve measurement of hostile media in harsh environments and will accommodate any media that will not adversely attack 304 or 316 stainless steel wetted parts. The SPT stainless steel devices are rugged and reliable transducers for use in a wide variety of pressure sensing applications where corrosive liquids or gases are monitored.

F1 Series

All F1 pressure transducers are manufactured in our Class 10 clean room environment. Our flow-through pressure transducers are specifically designed for the semiconductor industry. Their long life, coupled with long-term stability, can greatly reduce or eliminate the need for zero and span adjustments. All Honeywell transducers are CE certified with EMI/RFI protection and are manufactured to an electropolished wetted surface finish of 5 micro inch Ra maximum.

Approvals: CE, FM
Supply voltage: 12 Vdc to 36.0 Vdc
Signal conditioning: Amplified compensated

TLD Series

With space at a premium in semiconductor gas distribution systems, the Series TLD pressure transducer with local display offers an integrated solution that reduces the overall height of the transducer/display assembly to as little as 3.5 in [88,9 mm]. To accomplish this, the transducer's signal amplifier is mounted within the display, with the added benefit of zero and span adjustments conveniently located on the LED display face.

Supply voltage: 12.0 Vdc to 30.0 Vdc
Signal conditioning: Amplified compensated
Operating temperature range: -40 °C to 85 °C (-40 °F to 185 °F)
Compensated temperature range: 0 °C to 70 °C (32 °F to 158 °F)

HONEYWELL SENSING AND CONTROL PRODUCTS

Selecting the right sensor or switch for your application has never been easier. Honeywell Sensing and Control has one of the broadest product ranges of any supplier in the world, and the depth of our technology and product lines ensure that we are able to supply you with the right product for most applications.

We also have the outstanding technical support staff and responsive service to back this up, so you can always find what you need, when you need it. We aim to supply on time, every time, anywhere in the world.

Honeywell - Taking the risk and high costs out of system critical sensing and control.

You can find out more about Honeywell's extensive product range by visiting our website at

www.honeywell.com/sensing

There you can browse our interactive catalogue and discover our full range of products for use in Industrial, Automotive, Aviation, Transportation, Motion Control, Medical applications and more. Some of our more popular product families include:

Accelerometers

Utilizing Quartz Flexure and Resonating Beam technologies for inertial, control, and industrial applications.

Automotive Sensors

Speed and position sensors for engine management, wheel speed sensors, and position sensors for comfort, convenience, and motor control applications.

Basic Switches

Standard size, miniature, subminiature, hermetically sealed, and high temperature snap-action switches for applications requiring compactness, light weight, accurate repeatability and long life.

Current Sensors

Adjustable linear, null balance, digital, and linear output current sensors for monitoring ac or dc current.

Electronic and Electromechanical Safety products for Machine Safeguarding

Safety light curtains, laser scanners, mats, door interrupt devices and single and multi-beam optoelectronic devices for industrial machine safety. Safety interlock switches, limit switches and cable-pull limit switches for industrial machine safety. Safety control modules for industrial machine safety.

Environment Sealed Switches and Sensors

Designed for use in the harsh environments encountered in aerospace, transportation, ordnance and marine applications.

Fibre Optic Sensors

Active optoelectronic components and sub-assemblies (LEDs/transmitters, fiber-DIPs, receivers and modules) for the datacom market.

Force Sensors

Precise reliable performance in compact commercial grade packaging.

Hour Meters

Honeywell's Hobbs brand products are designed for elapsed time measurement for testing, leasing, maintenance and warranty programs. The meter family includes LCD, Counter, Battery Controller, AC Electro-Mechanical and DC Electro-Mechanical.

Humidity Sensors

Relative humidity/temperature and relative humidity sensors in chemically resistant packages to accommodate harsh environments.

Infrared Sensors

Optoelectronic standard infrared emitting diodes (IREDs), sensors and assemblies for object presence, limit, and motion sensing, position encoding, and movement counting.

Limit and Enclosed Switches

Heavy duty limit switches, enclosed switches (precision snap-acting switches sealed in rugged metal housing) and sealed and explosion-proof switches.

Liquid Level Sensors

Basic and industrial (designed for harsh industrial environments) liquid level sensors used to indicate the presence or absence of liquid.

Mass Airflow Sensors

Amplified and unamplified microbridge mass airflow sensors provide a sensitive and fast response to the flow of air or other gas over the chip.

Off-Highway Vehicular Lighting

Honeywell's Hobbs brand halogen sealed beams, composites, custom designer lights, specialty lighting and indicator modules for vehicular and non-vehicular applications.

Position Sensors

Hall-effect, magnetoresistive, and potentiometric devices for detecting the presence of a magnetic field or linear and rotary position.

Pressure Sensors

Stainless steel and silicon pressure sensors depending on the application, as well as a variety of high purity pressure sensors.

Proximity Sensors

Severe environment proximity sensors designed for use in applications with particularly demanding requirements on temperature, vibration, shock, and EMI/lightning resistance.

Pushbuttons, Keyswitches and Indicators

MICRO SWITCH brand pushbuttons, keyswitches, and indicators for use anywhere manual operation is desired.

Railway Sensors and Control Systems

Railwheel proximity sensors, interface modules, train departure control systems, solid state sensors, pressure sensors and electromechanical switches for on-board and off-board rail industry applications.

Honeywell

www.honeywell.com/sensing

Relays

General-purpose power relays and relay sockets designed for a wide range of applications that require stability and reliability.

Resolvers

Absolute position sensors which provides high angular accuracy, high resolution and repeatability under severe environmental conditions.

Temperature Sensors

Platinum- and silicon-based thin film resistance temperature devices (RTDs) for applications that require small package size, accuracy, and linear outputs.

Thermal Products

Bimetal thermostats, Discrete and Packaged Thermistors, Precision Hi-Rel Negative Temperature Coefficient (NTC) Thermistors., Thermal cut offs and Flexible Heaters

Thermocouples, Non-contact probes and RTDs

Megopak thermocouples, thermocouples with protecting tubes, Radiomatic/Rayotube Sensors, and the platinum RTD 100 Ohm.

Toggle and Rocker Switches

MICRO SWITCH brand toggles, rockers and paddle switches for use anywhere manual operation is desired. Military grade and environment sealed options are available.

Turbidity Sensors

Wash process turbidity sensors to improve product quality, minimize ingredient consumption, and reduce wastewater discharge in commercial and industrial bath applications.

Ultrasonic Sensors

Ultrasonic position sensors for presence/absence sensing, precision distance sensing or tracking for areas where other sensing technologies have difficulty, such as clear or shiny objects, foggy or particle laden air, or splashing liquids.

VCSEL Products

Vertical Cavity Surface Emitting Laser sensors for high speed data communication applications and a wide variety of sensor applications.

VRS Speed and Timing Sensors

Completely self-powered, VRS (magnetic) sensors are simple, rugged devices that do not require an external voltage source for operation. They are generally used to provide speed, timing or synchronization data to a display (or control circuitry) in the form of a pulse train.

HONEYWELL'S SENSOTEC RANGE OF SPECIALIST TEST AND MEASUREMENT PRODUCTS

The Honeywell Sensotec product range of industrial pressure transducers, load cells and electronic sensor instrumentation is one of the broadest in the world. We have a comprehensive range of strain gauge based, piezoelectric and coil wound transducers. We offer pressure ranges to 170,000 psi and load ranges to 3 million pounds with complete instrumentation and signal conditioning. We achieve accuracies of 0.05 in pressure sensing, and our calibration load cells have accuracies of 0.002 %.

Our unique expertise is in the packaging of our sensor technology, but we can provide you with reliable engineered solutions whether they are standard off-the-shelf transducers developed for general applications or sensors developed to meet unique requirements. The Sensotec range of transducers can be designed to withstand the harshest environments such as temperatures as low as -325 °F or as high as +425 °F, or ambient conditions up to 10,000 ft of seawater.

Warranty/Remedy

Honeywell warrants goods of its manufacture as being free of defective material and faulty workmanship. Contact your local sales office for warranty information. If warranted goods are returned to Honeywell during that period of coverage, Honeywell will repair or replace without charge those items it finds defective. **The foregoing is Buyer's sole remedy and is in lieu of all other warranties, expressed or implied, including those of merchantability and fitness for a particular purpose.**

While we provide application assistance, personally, through our literature and the Honeywell web site, it is up to the customer to determine the suitability of the product in the application.

Specifications may change at any time without notice. The information we supply is believed to be accurate and reliable as of this printing. However, we assume no responsibility for its use.
