### OPERATING LOGIC

The DNC-T2003 through DNC-T2032 controls are output sequencers with an adjustable ON TIME, OFF TIME, and LAST OUTPUT. Upon application of power to the L1 and L2 terminals with the high pressure switch contacts closed, the OFF TIME is initiated. At the end of the preset OFF TIME, output 1 will turn on for the preset ON TIME. The control will cycle through all selected outputs until the high and low pressure switch contacts are opened. If the pressure switch contacts open during the ON TIME, the output will complete the active ON cycle. The next time the high pressure switch is closed the next output in the sequence is fired. Pressure monitoring with no hysteresis is achieved by using only

a high pressure switch. Placing a jumper across the high pressure input forces the control to run continuously.

*Note: Controls are shipped with jumper across pressure switch terminals*

### PROGRAMMING

Programming is accomplished using 3 buttons: down, up, and select

**Down:** Decrements the active parameter

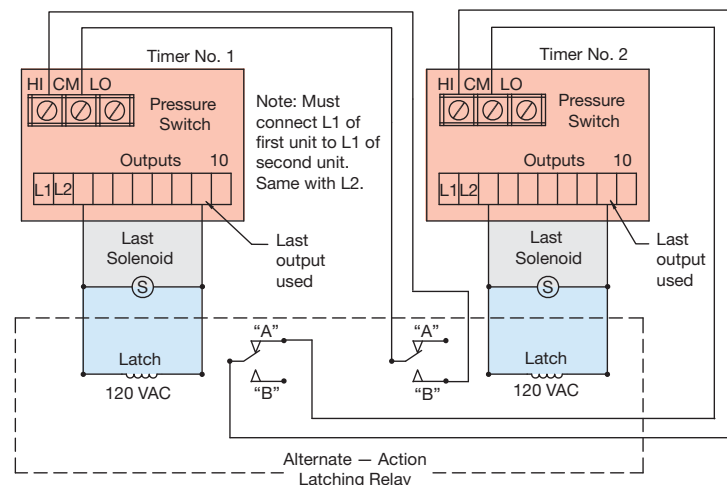

**Up:** Increments the active parameter

**Select:** Toggles amongst the adjustable parameters: on-time, off-time, and last output

**Programming Mode Timeout:** 60 seconds

### TEST & DEFAULT MODES

Test mode is entered by pressing and holding the select button for 3 seconds while the unit is in the normal operating mode. Once in test mode, the display will show tSt. Pressing the up or down arrow buttons toggles amongst outputs, and pressing select pulses the selected output for the preset ON-TIME. Pressing the select button while the display shows tSt will change the display to "dFt". While the display shows "dFt", the up and down arrows toggle amongst "y", "n", and "dFt". Pressing select when the message is "y" will set all adjustable parameters to the factory defaults. At any time in test and default modes, pressing and holding the select button for 1.5 seconds will revert the controller back to the normal operating mode.

### Caution:

1. Do not mount controls in high vibration areas without shock mounts.
  2. Do not mount controls in areas of high dust or corrosive atmospheres without a protective enclosure.
  - 3 Do not use a converter or inverter for the power source.
  4. Do not mount control in high transient voltage areas without an isolation transformer.
  5. Do not leave control box open.
  6. Do not allow a local repair shop to repair the controls, as we employ some very sophisticated components that could be further damaged.
