

# FP0 Series Programmable Controller

Panasonic ... the new name for NAiS

# FP0 – Super Compact PLC Incredibly small, alone or even as multiple combined units

**COM-Port: 2nd RS232C Interface** (optional for all CPU units for serial communication)

### Super Compact Size

A control unit a mere 25mm in width. Even expanded to I/O 128 points, the width is still only 105mm. The attachment area is the smallest in its class.

The control unit's dimensions are: W25\* x H90 x D60mm. Also, the I/O unit can be expanded to a maximum of 128-points. Even so, the size is still only W105 x H90 x D60mm, a super compact design that breaks all previous common sense rules on small-scale PLCs. With the smallest-ever attachment area, the FP0 is perfect for installation in machines, facilities, and control boards where miniaturization is progressing even further.

\*30mm width limited to I/O 32-points control unit.

#### Networking: - ETHERNET

- PROFIBUS
- S-LINK
- MEWNET-F
- Analogue modules featuring different numbers of input and output channels
- Programming software:
  - Control FPWIN Pro according to IEC 61131-3
- Control FPWIN GR easy, conventional programming
- The photo illustrates adding three I/O 32-point expansion units to an I/O 32-point control unit, yielding 128 points.

Supply voltage 24VDC.

## **Easy Expansion**

### The expansion unit can be attached easily without any cables.

The expansion unit can easily be attached directly to the control unit. Special expansion cables, backplanes, and so forth, are unnecessary as the expansion unit employs a stacking system that uses expansion connectors and locking levers on the surface of the unit itself.

(Maximum possible expansion is three units)

#### Because of its super compact size and high capabilities, the units are useful in a wide variety of applications.

# FP0 – Impressive Capabilities High specifications for both speed and capacity

0.9µs per basic instruction. Pulse catch and interrupt input functions meet the need for high-speed response.

## **High-speed execution**

Execution speed of 0.9µs per basic instruction. 500 steps program yields a scanning time of 1ms, which means the FP0 boosts the fastest processing time among the products of this class.

## Large capacity

A top-class large 5k and 10k steps program capacity housed within a compact body. Furthermore, data capacity for internal devices like the data register is also ample. The unit's high performance is even suited to complicated controls and controls with multiple amounts of data.

Equipped with 2-axis independent positioning and high-speed counter for support of PWM output.

## Pulse output function

(For transistor output type only) The unit comes equipped with 2 channels for the output of up to 10kHz pulses (5kHz during 2-channel output). Since these two channels can be separately controlled, the PLC is also suitable for independent 2-axis positioning. Setting automatic trapezoid control, automatic return to home position and JOG operation are made very easy by using instructions specially designed for such operations.

# High-speed counter function

The high-speed counter is prepared for 4 channels in single phase, and 2 channels in 2-phase. In single phase, the 4-channel total is 10kHz, and in 2-phase the 2-channel total is 2kHz total speed, making the unit suitable for conveyer control, inverter control, and so forth using an encoder. Encoder

## PWM output function

Its PWM (Pulse Width Modulation) output function makes it possible to provide temperature control with a single compact FP0 unit. (For transistor output type only)

## Serial communication function

- The FP0's second RS232C port (types C10CRS, C14CRS, C16C, C32C, and T32C) allows direct connection to computers and operation display panels. Also, bi-directional data communication with barcode readers and other RS232C devices is made easy.
- · Both the relay type and transistor output type control units are optionally equipped with a 2nd RS232C port.

## Analogue control function

Analogue control is made simple with four types of analogue modules featuring different numbers of input and output channels. Also, despite the small size, the I/O resolution is a high 1/4000 (12 bits). Support various I/O ranges by setting the DIP switches on the analogue I/O unit for simple operation.

# FP0 Communication Serial interfaces and modem compatible

Communication – Simple and efficient via two serial interfaces: TOOL-Port and COM-Port (RS232C interface).

## Programming interface TOOL-Port (also for communication)

In Computer Link mode, this port offers access to the entire FP0 memory area. For example during data exchange between a host PC running SCADA software and an FP0 PLC, the Windows<sup>®</sup> based MEWNET-DDE Server assumes total control of the communications protocol (MEWTOCOL.COM). Therefore the user can disregard the allocation of data ranges and transfer parameters, because there is no additional programming required. The programmer is thus free to concentrate exclusively on the project application requirements.

## **Communication Interface COM-Port**

(flexible with two modes of operation, Computer Link and General Purpose)

In addition to the Computer Link communication possibilities described above, the optional integrated RS232C COM-Port in the FP0 CPU module (types FP0-C10CRS, FP0-C14CRS, FP0-C16C, FP0-C32C and FP0-T32C) offers flexible programming i.e. General Purpose. In this configuration it is possible to realise communication connections with different RS232C peripheral devices, e.g. Bar Code Readers, slave devices, printers, measurement sensors or telecommunication transmitters, etc.

# **Communication Interface COM-Port**

Freely programmable RS232C interface for CPU modules type FP0-C10CRS, FP0-C14CRS, FP0-C16C, FP0-C32C and FP0-T32C

## **Programming Interface TOOL-Port**

For programming, and additionally Master/Slave communication, using MEWTOCOL COM (Matsushita protocol)

## Modem compatible

Even modem communication function is built into this compact body. Using a single telephone line, programming maintenance can be carried out in remote facilities. With C-NET, multiple FPO units can be connected.

# **FP0 Communication**

# Easier maintenance than ever before

### Maintenance saving

### Program memory uses EEPROM. In addition, programs can be changed even in RUN mode!

#### Overwrite function in RUN mode

It is possible to overwrite a program while the FP0 is running, such as during program debugging and startup adjustments.

#### Backup battery unnecessary

The program memory uses EEPROM. The program and device contents can be stored without a backup battery, and even programming for a machine builder is safe.

### Password function

A password function can be set in order to change a program. Limited to people authorized to make program changes, protection can be guaranteed better than ever.

### Input/output verification LED

Every unit is equipped with LED I/O indicators, housed within a compact body. Input/output status can be verified at a glance.

### Simple installation

# Comes with either terminal block or connector. Either type is easy to connect to wiring by simply removing the terminal section.

Terminal block

Compatible models FP0-C10RS, C10CRS, C14CRS, E8RS, E16RS

#### MIL connector

Unit connectors can be used with 16-points and 32-points units. Due to the loose-wiring, pressure contact type design, wiring is easy without the need for insulation. (MIL-C-83503)

Compatible models FP0-C16T/C16P/C16CT/C16CP, C32T/C32P/C32CT/C32CP, E16T/E16P, E32T/E32P, FP0-T32CP/T32CT

# FP0 PROFIBUS DP Slave or Remote I/O Unit

百万万万万万

# For cost effective control of distributed field device

The FP0 DPS2 can operate either as a DP slave module or as a remote I/O system to which different decentralised inputs and outputs can be connected. A DIP switch can be used to switch between the two modes:

### Mode 1:

DP-Slave module. Connect the FP0 or FP $\Sigma$  (Sigma) CPU + expansion modules to the PROFIBUS network.

#### Mode 2:

Remote I/O. Connect up to three expansion modules without CPU to the PROFIBUS network.

In Remote I/O mode the unit can be connected to any PLC which offers a PROFIBUS communication interface, making it totally independent of NAiS PLCs.

# **FP0 S-LINK Unit** Connects directly to the S-LINK for reduced wiring

Item

Power supply

S-Link is a system which simplifies connection of rapidly increasing control devices accompanying progressing automation and is useful in reducing your costs and construction time.

### Features

Description

- Small size of only W30 x H90 x D60 mm. Makes use of the T-shaped connectability of the S-LINK for reduced wiring and reduced size of the control panel.
- **2. Controls 64 input points and 64 output points.** Able to control up to 128 points for S-LINK-related devices.
- **3. Allows simultaneous use of expansion units.** Similar to other FP0 units, up to three expansion units can be used for efficient I/O wiring.

FP0-SL1 4. A wide range of I/O modules allow manifold customer-oriented network layouts.

## Direct connection for reduced wiring

### Wire-saving

The use of wires is greatly reduced and the number of connecting terminal blocks is minimized, resulting in large reduction in cost, as well as, the waste generated during wiring.

### Space effective

S-Link devices are compact. The control box can be mounted in a tight space.

### **Quick construction**

Sensors cab be easily connected with plug-in connection.

# FP0 MEWNET-F Unit Networking units

### **MEWNET-F**

### The FP0 can be used as a slave station for MEWNET-F (remote I/O system) by adding I/O link unit.

MEWNET-F is a reduced-wiring remote I/O system that connects PLCs located separately and I/O slave stations with 2-core cabling. By adding an I/O link unit to the FPO, you can link master station PLC and FPO inputs and outputs via the network.

## **C-NET**

## By using C-NET, you can use multiple FP0s as data collection terminals.

By using the C-NET network and exclusive adapters, you can connect multiple FP0s by multi-drop connection with 2-wire cables. You can use computers for separate control or have network terminals for a centralized management system.

# FP0 Thermocouple Input Expansion Units

# Enable high precision temperature control at low cost

The FP0-TC4 and FP0-TC8 thermocouple units are suitable for user friendly temperature acquisition using standard thermocouples with high precision.

- Up to three units can be added to each control unit, enabling temperature control of up to 24 channels.
- The temperature data obtained using the thermocouple is converted to the digital value to be read into the FP0 control unit.
- Standard types of thermocouples can be used: K, J, T and R
- 3 temperature measurement ranges are available:
  - -100°C to +500°C (Thermocouple types: K and J)
  - -100°C to +400°C (Thermocouple type : T)
  - 0°C to +1500°C (Thermocouple type : R)
- The temperature data measured using the sensor is converted to degrees Celsius or degrees Fahrenheit inside the Thermocouple Unit.
- The converted data (°C or °F) is averaged, so that even unstable input signals can be properly read.
- Broken thermocouples can be detected.

# Analogue Signal Processing FP0 Analogue Units

### Features

有常常有有

The analogue units can be used with the FP0 and  $FP\Sigma$  (Sigma) so wide range applications are possible from small-scale machines to factory production systems.

Each CPU supports up to 3 FP0 analogue units. Combination with digital and analogue expansion units is freely allowed.

Highest performance is offered with 12-bit resolution. With a current and voltage output conversion time of up to 500µs, the units are capable of high-speed processing.

The multimode FP0 analogue unit can be configured via the DIP switches on the front side into the required analogue ranges. Communication with the FP0 CPU unit is achieved via the expansion bus. The expansion bus is automatically connected after the FP0 analogue unit is connected to the FP0 CPU unit.

Note: Function Blocks for FPWIN Pro Programming System can be downloaded free of charge from our WEB-page.

# User friendly acquisition of temperatures with high precision

## **Features**

- The module can be easily installed in an existing system: Special connection cables, backplanes, and so forth are unnecessary as the expansion unit employs a stacking system that uses expansion connectors and lock levers on the surface of the unit itself.
- Multiple RTD types are allowed in one module, creating a cost-effective solution.
- About the Application areas:
  - Measurement and control equipments
  - Process and Machine controls
  - Greenhouse and Agro industries

FP0-RTD6 6 channels

Take advantage of the various FPWIN Pro libraries with many functions and function blocks. These ready-made programs can be saved and reused time and again and will help you to shorten the time needed to develop applications drastically, and consequently to save valuable human resource costs.

#### Controller Library: NCL-MR-LIB

The programmable logic arrays of the controller library simplify the programming of closed loop controlled electrical installations. The library includes linear and non linear controller types such as the P/I/PI/PID controller and two points-/three-points controller with and without hysteresis. Programmable logic arrays for dead band, interpolation, lamp limiting, dead time and averaging are also included.

# Control FPWIN Pro PLC programming software conforming to IEC 61131-3

**Control FPWIN Pro** is the Matsushita programming software according to the international standard IEC 61131-3. **Control FPWIN Pro** works with the FP0 as well as any FP series programmable controller. Also, since the tool port is an RS232C, connection to a PC is easy – it only requires a single cable. No converter or adapter is required.

Control FPWIN Pro - Programming

### The most important highlights at a glance:

- Reuse of ready made functions and function blocks saves time for programming and debugging
- 5 programming languages (Instruction List, Ladder Diagram, Function Block Diagram, Sequential Function Chart, Structured Text)
- Convenient comment application in 6 languages (English, German, French, Italian, Spanish, Japanese)
- 4 standard libraries (IEC Standard library, Matsushita library (M Lib), Pulsed library (P Lib), NC Tool library (NC Tool Lib))
- E Fewer errors through defined data types and encapsulation
- Well-structured through programme organisation units, taskand project management
- Online monitoring and diagnostic
- Ethernet and Modem communication for remote-programming, -service, and -diagnostic
- Password protection with different levels
- Many additional application libraries available
- IEC 61131-3 protects your investments for the future

# **Control FPWIN GR**

# PLC programming software for easy operation

## **Features**

### FP Series programming software for Windows.

- 1. To facilitate operation on site, a mouse is not required for input, search, write, monitor and timer edit operations. Everything can be accomplished with a keyboard alone.
- 2. Standard Windows operations, such as copy and paste, are included.
- 3. Supports all FP series machines. Software created with NPST-GR Ver. 3 or 4 can also be used.
- 4. Inherits convenient functions developed for NPST-GR.

### **Usage environment**

OS	Windows 95/98/NT (Ver. 4.0 or later)/XP
Required hard disc capacity	At least 30MB
Recommended CPU	Pentium 100MHz or higher
Recommended installed memory	32MB or more
Recommended screen resolution	800 x 600 or higher
Recommended display colors	High Color (16-bit or higher)

## **Applicable PLC types**

\*All products on the market are supported. All FP series types are supported: FP∑ Sigma, FP0, FP-e, FP1, FP2, FP2SH, FP3, FP10SH, FP-M

Note: FPWIN GR Vers. 2.2 or later is needed to program the FP-e

### Menu

#### Function instruction list

Classified by type, function commands can be selected from the displayed list. (Simple help included.)

#### I/O comment edit function

Successive I/O comments can be input for each device type. Data from Excel and other applications can be copied and pasted via the clipboard.

Access often-used functions using icons.

### Function bar

Provides information regarding command input and confirmation, on-line/off-line selection and PLC mode selection.

### Status display

**Displays information** concerning PLC usage environment and settings, and detailed information when an error occurs.

# Control CommX, PCWAY, OPC Server

# Visualisation software for ready made or customised solutions

## **Control CommX**

### The connection in ActiveX technology.

- Connects your Visual Basic application to Matsushita PLCs.
- Gives you the possibility to easily develop highly customised control solutions.
- Create your own application very quickly by simply adding the functionality of ActiveX control to your code written with Visual Basic.
- No knowledge of MEWTOCOL (Matsushita's PLC communication protocol) needed.

## **PCWAY**

### Add-on software for Excel to monitor and change PLC data.

- The Excel add-in software PCWAY is available for data collection of the networked PLCs. The contents of the PLC bits and data registers can be simply shown and managed on Excel worksheets.
- Settings in PCWAY can be used to switch display contents and character colour corresponding to contact on/off status and register values, and perform calculations based on register values. Excel macros are not necessary.

## **MEWTOCOL OPC Server**

### The connection between PLC and SCADA software.

- Provides a standard interface between our FP Series PLCs and various SCADA/HMI software\* used to build a monitoring system compliant with commercially available OPC clients. It is also possible to use OPC automation interface to link our FP series PLCs with Visual Basic.
- OPC (OLE for Process Control) is an interface standard for linking software with various companies' control devices. This standard allows connections between OPC-compliant products.

\* We have confirmed linking with iFIX Ver.2.6 (Intellution),

InTouch Ver.7.0 (Wonderware), and RSView32 Ver.6.3 (Rockwell Software).

### **Control units**

Notes:

- A power cable (order number AFP0581) is enclosed with the control unit and the relay output type upgrade units (Transistor output type upgrade units do not require a power cable).
- Two Phoenix terminals (9-pin) are needed with the relay output type terminal type. A 2.5mm width screwdriver is needed for the wiring. Have ready a dedicated terminal screwdriver (order number AFP0806: Phoenix order number SZS0, 4 X 2.5 compatible), or equivalent.
- A loose-wiring pressure socket and contact (2 pins with order numbers FP0-C16T/P, E16T/P, and 4 pins with order numbers FP0-C32T/P, E32T/P) are needed with the transistor output type. A loose-wiring connector pressure contact tool (order number AXY52000) is needed for the wiring.

# **FP0 Product Overview**

# Order numbers

Product Name	Part Number
P0-C10RS, 6 Inputs / 4 Outputs (p+n / Relay)	FP0-C10RSA
P0-C10CRS, 6 Inputs / 4 Outputs (p+n / Relay), RS232 COM-Port Interface	FP0-C10CRSA
P0-C14RS, 8 Inputs / 6 Outputs (p+n / Relay)	FP0-C14RSA
P0-C14CRS, 8 Inputs / 6 Outputs (p+n / Relay), RS232 COM-Port Interface	FP0-C14CRSA
P0-C16P, 8 Inputs / 8 Outputs (p+n / Transistor PNP)	FP0-C16PA
P0-C16CP, 8 Inputs / 8 Outputs (p+n / Transistor PNP), RS232 COM-Port Interface	FP0-C16CPA
P0-C32P, 16 Inputs / 16 Outputs (p+n / Transistor PNP)	FP0-C32PA
P0-C32CP, 16 Inputs / 16 Outputs (p+n / Transistor PNP), RS232 COM-Port Interface	FP0-C32CPA
P0-C16T, 8 Inputs / 8 Outputs (p+n / Transistor NPN)	FP0-C16TA
P0-C16CT, 8 Inputs / 8 Outputs (p+n / Transistor NPN), RS232 COM-Port Interface	FP0-C16CTA
P0-C32T, 16 Inputs / 16 Outputs (p+n / Transistor NPN)	FP0-C32TA
P0-C32CT, 16 Inputs / 16 Outputs (p+n / Transistor NPN), RS232 COM-Port Interface	FP0-C32CTA
P0-T32CP, 16 Inputs / 16 Outputs (p+n / Transistor PNP), RS232 COM-Port Interface, 10 000 steps Program memory	FP0-T32CPA
P0-T32CT, 16 Inputs / 16 Outputs (p+n / Transistor NPN), RS232 COM-Port Interface, 10 000 steps Program memory	FP0-T32CTA
P0-SL1. S-LINK CPU, Master	FP0-SL1
. Expansion Units	110021
roduct Name	Part Number
P0-E8RS, 4 Inputs / 4 Outputs (p+n / Relay)	FP0-E8RSA
PO-E8X, 8 Inputs (p+n)	FP0-E8XA
PO-E8YP, 8 Outputs (Transistor PNP)	FP0-E8YPA
P0-E8YT, 8 Outputs (Transistor NPN)	FP0-E8YTA
P0-E16RS, 8 Inputs / 8 Outputs (p+n / Relay)	FP0-E16RSA
P0-E16P, 8 Inputs / 8 Outputs (p+n / Transistor PNP)	FP0-E16PA
P0-E16T, 8 Inputs / 8 Outputs (p+n / Transistor NPN)	FP0-E16TA
PO-E16X, 16 Inputs (p+n)	FP0-E16XA
P0-E16YP, 16 Outputs (Transistor PNP)	FP0-E16YPA
P0-E16YT, 16 Outputs (Transistor NPN)	FP0-E16YTA
P0-E32P, 16 Inputs / 16 Outputs (p+n / Transistor PNP)	FP0-E32PA
P0-E32T, 16 Inputs / 16 Outputs (p+n / Transistor NPN)	FP0-E32TA
P0-A21, 2 analogue inputs / 1 analogue output	FP0-A21A
P0-A80, 8 analogue inputs	FP0-A80A
P0-TC4, 4 thermocouple inputs	FP0-TC4
P0-TC8, 8 thermocouple inputs	FP0-TC8
P0-RTD6, 6 RTD Inputs, Pt 100, Pt 1000, Ni 1000	FP0-RTD6
