

LITHIUM - Coin Type: High Operating Temperature

Panasonic's coin type high operating temperature lithium batteries are high energy, high reliability batteries for applications that require a wider operating temperature range. The full 3 volts in these high energy density batteries is about twice that of conventional dry batteries.

These batteries are for applications exposed to extended temperature ranges and harsh operating conditions.

Features:

- A wide operational temperature range: -40°C (-40°F) ~ 125°C (257°F)
- Good storage stability (max. 0.5% loss at ambient T°)
- Constant operating voltage
- Excellent leakage resistance
- Available with tab terminals for PCB mounting

Applications:

- Automotive electric systems
- Tollway transponders
- RFID
