

Agilent 11713B/C Attenuator/Switch Drivers

Configuration Guide

This configuration guide will assist you through the process of configuring a switching system using the Agilent 11713B/C attenuator/switch drivers.

Agilent Technologies

Key Features

The 11713B attenuator/switch driver is a GPIB compatible instrument that concurrently drives up to two four-section programmable step attenuators and two microwave coaxial switches, or up to 10 SPDT switches². The 11713B is fully backward compatible with the 11713A in terms of functionality and fit. Connectivity using USB and LAN are optional.

The 11713C attenuator/switch driver is a GPIB/USB/LAN compatible instrument that concurrently drives up to four programmable step attenuators and four microwave coaxial switches, or up to 20 SPDT switches². The 11713C comes with tri-voltage selection of 5V, 15V and 24V and also permits user-defined voltage supply capability.

- Programming via GPIB/USB can be accomplished in simple one-line statements.
- Control the attenuator/switch drivers through LAN using a web-based interface.
- An integrated LCD display eases menu selection and instrument configuration.
- Inclusion of solenoid arc suppression diodes with three pre-defined common terminal supplies allow the instrument to be used with wide variety of attenuators and switches.

Note 1: 11713B/C attenuator/switch drivers output continuous current and do not support pulse drive. Please ensure your switching devices can withstand continuous current or have a built-in current interrupt feature.

Note 2: The amount of switches and attenuators that can be driven will depend on the type of switch configuration and attenuator section configuration. The 11713C can drive twice as many devices as the 11713B; however, the total load current that can be consumed is still 1.7A.

Specifications

Drive power supply specifications

Specifications below describe warranted performance over the temperature range of 0 to 50 °C after one hour of continuous operation, unless otherwise noted.	
Voltage	+24 ± 8% Vdc
	+5 ± 5% Vdc
	+15 ± 12% Vdc
Current	1.7 A maximum continuous current
	Contact pairs 1 through 8, 9 and 0, maximum current of 0.7 A per contact

Supplemental characteristics

Supplemental characteristics are intended to provide useful information and are typical but non-warranted performance parameters.	
Power	100 or 240 Vac, automatic selection, 50/60 Hz
	100 VA maximum
Response time	100 µs maximum for contact pairs 1 through 8
	20 ms maximum for contact pairs 9 and 0
Driver life	2,000,000 switchings at 0.7 A for contact pairs 9 and 0
Maximum load inductance	500 mH
Maximum load capacitance	< 0.01 µF for contact pairs 9 and 0

Physical specifications

Net weight	3.2 kg (7.1 lbs)
Dimensions (H x W x D) with handle and rubber bumper	130 mm x 250 mm x 462 mm (5.1 inches x 9.8 inches x 18.2 inches)
Dimensions (H x W x D) without handle and rubber bumper	88 mm x 212 mm x 348 mm (3.5 inches x 8.5 inches x 13.7 inches)

Product Configurations

The 11713B/C attenuator/switch drivers can be configured easily. The connection between the driver and switching devices is intuitive and direct. Simply select the appropriate interface cable and you can make point-to-point connection from the driver to the attenuator(s) and/or switch(es). Details such as pin numbers and wires color are provided in the tables found in *Configuration Information for Switches* and *Configuration Information for Attenuators* sections.

Note 1: The maximum quantity orderable for each cable option is 9.

Five Simple Steps to Configure your Switching System

1. Determine the switching device's model and option (DC connector).

Example

Model: **87104A (SP4T switch)**
 Option: **100 (solder terminal)**

2. Determine the attenuator/switch driver's model and option (interface cable).

Example

Model: **11713B**
 Option: **201 (Viking connector to 12-pin conductor cable, bare wire)**

3 Use the selection guide, Table A (page 11) for switches and Table B (page 12) for attenuators, to determine which configuration table to use for further reference.

Example

Selection guide: **Table A (for switches)**
 Configuration table: **Table F-1**

1. Refer to Table C-2 if a cable with banana jacks is used to make a connection between 8761A/B and 11713B/C.
2. N1810UL/TL, N1811TL and N1812UL cannot withstand continuous current. Option 403 (current interrupt) is required to protect the switches from damage due to overheating.
3. 8765A/B/C/D/F require continuous current to latch. The number of switches for connection depends on option selection.
