

FEED-THROUGH Spring Clamp Terminals

These terminal blocks offer a time saving alternative to the popular screw clamp connection. They can be mounted on 35 mm DIN rails. Insulated push-in type jumpers offer a quick and shock proof solution for most cross-connection applications.

MULTI-CONNECTION Spring Clamp Terminals

Altech Multiple connection Spring Clamp terminals offer a reliable solution for problems posed by multiple voltage connections. The terminal eliminates conventional method of cross connection / looping, saving additional space.

The terminals provide possibility of further multiplication of connections through bridging. The Multiple Connection Terminal Blocks can even be bridged to Standard Feed Through Spring Clamp Terminal Block of respective wire size (CSC2.5T / CSC4T).

PANEL MOUNT SPRING CLAMP TERMINALS

Altech "screwless" spring clamp panel mount terminal blocks are an excellent solution for extremely compact wiring applications. These terminal blocks are "add-on" type and can be stacked to form multi-pole assemblies. The stacked assembly is fitted with mounting end sections on both ends for easy installation on to the panel.

The terminal has marker holding recesses on three sides to accept marking tags. Cross connection can be achieved with the aid of insulated jumpers.

The CSCP2.5T2 panel mount terminal blocks have two connection points on each side. The terminals provide possibility of further multiplication through jumpering.

NEW PRODUCTS AVAILABLE IN 2003

CSCGT4T

Altech spring clamp ground block snaps on the DIN rail, making a reliable electrical connection between the DIN rail and the terminal block.

CSCFL4T

Altech spring clamp fuse blocks provide protection in electrical circuits. These fuse blocks accept standard Ø5x20 and Ø5x25 mm fuses.

CTS16U

CTS16U is a standard feed-through terminal block for 12-4 AWG wires.

Pluggable Spring Clamp Terminal Blocks

The PVP-5.00-L header and the SH-5.00 plug can be used in conjunction with the CSC2.5T, CSC2.5T1-2 or CSC2.5T2-2 terminal blocks to build pluggable interfaces. The operating tool CAOPT is used to insert the headers in the spring clamp blocks. The plug can now be snapped into the header for quick and reliable wiring. MT5 and MT9F marking tags can be used for circuit identification.
