## SLU-100 Series

Phase Monitor Relays (3-Phase Monitors) provide cost-effective protection against premature equipment failure caused by voltage faults on 3-Phase systems (Wye or Delta). The SLU Series multi-mode phase monitoring relay, was designed for the convenience of electrician's, maintenance managers and engineers. A single SLU Phase Monitoring Relay can be easily adjusted for the *voltage, imbalance percentage* and time delay requirements to protect against *unbalanced voltages* or *single phasing* regardless of any regenerative voltages.

Both **Delta** and **Wye** systems may be monitored. In Wye systems, connections to neutral are NOT required.

NOTE: Not recommended for generator or variable frequency drive applications. Call technical support for application assistance.
