DPM 970

A 3 ½ digit LCD panel meter, featuring 19mm (0.75") digit height and LED backlighting, the DPM 970 is a true RMS voltage and current meter with 500V a.c. (2kV[®]) and 2mA full scale readings as standard. By changing the value of scaling resistors or adding a shunt, this module will measure most a.c. voltages and currents. The DPM 970 features digital hold function which freezes the last displayed reading. Calibration is achieved via two multi-turn potentiometers for offset and scale. Connection to the meter is via screw terminals. The module is housed in a robust carrier which can be bolted in place or panel mounted using the bezel, window and clips provided.

- 19mm (0.75") Digit Height l

- **Digital Hold** Ŀ
- 500V a.c. (2kV²) Full Scale Reading
- **Measures Voltage and Current**
- **LED Backlighting**

SCALING

The value of the four scaling resistors RA1, RA2, RBI, RD1 and a link setting (LK2) may be altered in order to change the full scale reading (F.S.R.) of the meter - see table. To ensure that the meter reads "000 with zero input voltage/current, short circuit ACV and COM and adjust the ZERO potentiometer. The meter will need re-calibration by adjusting the CAL potentiometer.

Required F.S.R.		RA1	RA2	RB1	RD1	LK2
200mV	1	0R	0R	Not Fitted	Not Fitted	Linked
2V	0	390k	220k	330k	910k	Open
20V	0	680k	390k	39k	910k	Open
200V	0	560k	560k	3k9	910k	Open
2kV (factory default)	12	560k	560k	390R	910k	Open
2mA	3	-	- 1	100R	Not Fitted	Linked
20mA	3	-	-	10R	Not Fitted	Linked
200mA	3	-	-	1R	Not Fitted	Linked
2A	34	-	-	0R1	Not Fitted	Linked
20A	34	-	-	0R01	Not Fitted	Linked

NOTES

Use inputs ACV and COM for measuring voltage.

For measuring voltages above 500V₀₀₅, external scaling resistors must be used. Use inputs ACI and COM for measuring current. When measuring in excess of 200mA use an external scaling resistor. We recommend õ

Ğ ă

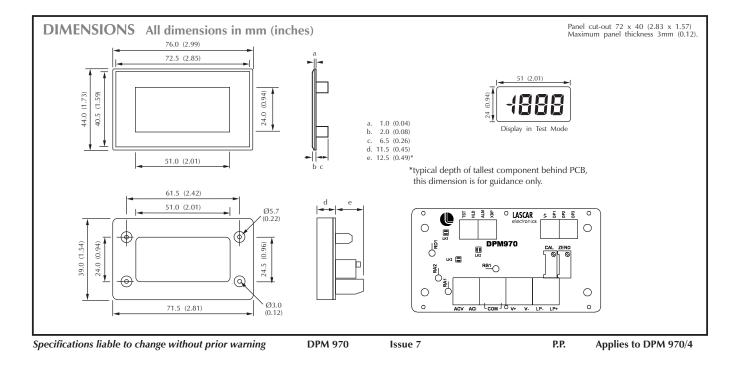

the use of a current transformer when measuring in excess of 10 Amps. Consult the current transformer manufacturer's data for connections and recommendations. Other scaling factors can be achieved via the correct selection of scaling resistor values

Standard Meter DPM 970							
Specification	Min.	Тур.	Max.	Unit			
Accuracy (overall error) *		0.5	1.5	% (±2 count)			
Full scale reading **	0		1999	Vrms			
Resolution		1		Vrms			
Sample rate		3		samples/sec			
Operating temperature range	0		50	°C			
Temperature stability		200		ppm/°C			
Frequency range (input voltage)	15		15k	Hz			
Input impedance (2kV range)		1		MΩ			
DC Supply voltage	7.5	9	14	V d.c.			
Supply current (Backlighting off)		1.5		mA d.c.			
Supply current (Backlighting on) @ 5Vd.c.		50		mA d.c.			

To ensure maximum accuracy, re-calibrate periodically.

** Maximum safe input voltage across the ACV and COM terminals is 500VRMs. If voltages to be measured exceed 500VRMs, then fit scaling resistors externally to the module.

SCREW TERMINAL FUNCTIONS

- ACV Alternating voltage measurement input, accepts up to 500V a.c. By changing the values of scaling resistors RA1, RA2 and RB1, other voltage and current ranges can be achieved. To measure in excess of 500V a.c., remove RA1, RA2 and RB1 from the meter and fit an external divider that will output 700mV for a 2kV input, e.g. series resistor 1.12 MΩ shunt resistor 390R, link RA1 and RA2 on the meter. See scaling table for suitable values for RA1, RA2, RB1 and RD1.
- ACI Alternating current measurement input.
- See Scaling table for suitable values for shunt resistor RB1.
- COM Return line for voltage measurement input (ACV) or current measurement (ACI) input.
- COM Return line for voltage measurement input (ACV) or current measurement (ACI) input.
- V+ Positive power supply input.
- V- Negative power supply input.
- LP- Negative supply for LED backlighting.
- LP+ Positive supply for LED backlighting.
- TST Connect to V+ to display all segments except decimal points and annunciators. It should not be operated for more than a few seconds as the DC voltage applied to the LCD may "burn" the display. This connection is normally at 5V below V+ and is the ground for the digital section of the meter.
- HLD Digital Hold option. Connect to V+ to hold last displayed reading indefinitely.
- ALM Alarm "!" annunciator. Connect to XDP to display.
- XDP Annunciator drive waveform. Used to drive alarm annunciator (ALM) if required.
- V+ Auxilliary V+ for connections to decimal points DP1, DP2 or DP3.
- DP1 199.9 Connect to V+ to display required decimal point.
- DP2 19.99 Connect to V+ to display required decimal point.
- DP3 1.999 Connect to V+ to display required decimal point.

\triangle SAFETY WARNING \triangle

To comply with the Low Voltage Directive (LVD 93/68/EEC), input voltages to the module's connectors must not exceed 500VRMS. If voltages to be measured exceed 500VRMS, then fit scaling resistors externally to the module. If the mains power supply is connected to the module, then all the module's connectors must be considered to be floating at mains potential. Consequently due caution must be exercised when connecting to the module's connector functions under these conditions. The user must ensure that the incorporation of the DPM into the user's equipment conforms to the relevant sections of BS EN 61010 (Safety Requirements for Electrical Equipment for Measuring, Control and Laboratory Use).
