Solid State Timers and Controllers

### 0.1 Seconds to 1024 Hours!

## 2310SA

## DIP Switch Adjustable Single-Shot Timer

The 2310SA is an initiate switch controlled single shot timer controlling a SPDT set of relay contacts. The 2310SA is available in both AC and DC voltage models, and all models provide an integral 12 position DIP switch used to determine the time delay value. With the operating voltage applied the unit is in standby mode. Momentary closure of the external initiate switch causes the output contacts to transfer for the preset timing period and then de-energize. Re-closure of the initiate switch during the time delay period will not affect the timing cycle in progress. DIP switches 11 \& 12 determine the time delay range, while switches $1-10$ determine the time delay period. The integral LED indicates the state of the output contacts.

## Timing Diagram

## Setting the Time Delay

Setting the time delay is an easy two step process :
Selecting the Time Range - Open or Close switches 11 \& 12 per the chart below to select from the four time ranges: 0.1-102.4 seconds, 1-1024 seconds, 1-1024 minutes, and 1-1024 hours.
Setting the Time Delay - The timer has a built-in delay equal to the switch 1 value for the selected range ( $0.1 \mathrm{sec}, 1 \mathrm{sec}$, etc.). Close the additional switches (1-10) which add their values from the chart below to the builtin time to achieve the desired time delay.

Example: To set for 30 minutes - switches 11 closed and 12 open for minutes range, then close switches $5,4,3$, and 1 for a total of 29 minutes, all other switches open. The built in 1 minute completes the full 30 minutes.

## Specifications

Timing Mode: Microprocessor-based Single Shot.
Operating Voltage: Nonpolarized connection, see values below, $50 / 60 \mathrm{~Hz}$ for AC voltages.
Operating Power: Idle operating current < 10 mA for all voltages. Nominal operating current with relay output energized is 60mA @ 12VDC (-2), 30mA @ 24V AC/DC (-3), 15mA @ 115VAC (-8).
Operating Voltage Tolerance: $-10 \% /+20 \%$
Operating Temperature: $-20^{\circ} \mathrm{C}$ to $+65^{\circ} \mathrm{C}$.
Purchase Tolerance: $\pm 2 \%$ or 20 mS whichever is greater.
Timing Repeatability: Better than $\pm 2 \%$.
Time/Temperature Coefficient: Better than $\pm 0.1 \% /{ }^{\circ} \mathrm{C}$.
Recycle Time: 75 mSec minimum with relay on, 150 mSec minimum with relay off.
Output Relay Ratings: SPDT contacts rated 12A resistive at 125VAC, 7A resistive at 250VAC/ 30VDC.
Contact Life Expectancy: 30,000 cycles @ 12A/120VAC, 100,000 cycles @ 10A/120VAC or 7A/ 240AC, 900 cycles/hour maximum w/resistive load.
Terminations: Octal plug-in type.
Dielectric Rating: 750 Vrms between open contact sets, 1500 Vrms between contacts and operating voltage terminals.
Transient Protection: Protected by silicon transient suppressors responding to transients within $1 \times 10^{-12}$ seconds to a peak pulse power dissipation of 1500 W .
Agency Recognition: Certified to UL Component-Appliance Controls ATNZ2 (US) and ATNZ8 (Can), UL File E47858.
