## Insulation Testers (Megohmeters)

These insulation testers are intended primarily for periodic testing of industrial motors, transformers, electrical wiring, and cable insulation for signs of deterioration. Low readings may indicate impending failure and permit replacement during routine maintenance rather than risking production downtime. Also useful for safety testing of TV sets and appliances to assure no hazardous leakage current. The voltage and resistance ratings for insulation testing are often specified for the product to be tested.

## Models 300, 305

- Test insulation resistance
- Measure AC voltage to 600V
- **■** Battery powered
- 1000V, 2000MΩ (Model 300) 500V, 1000MΩ (Model 305)

## Models 307, 308

- Selectable 250V, 500V, or 1000V insulation test
- **■** Low resistance test
- **■** Extra rugged integral carrying case
- Live circuit indicator warns of safety hazard
- Push to test
