

Safety Switches

Product Description

SAFETY SWITCH

A safety switch is used to open or close an electrical circuit. Non-fusible safety switches provide a means to manually connect or disconnect the equipment from the power source. Fusible safety switches provide a means to manually open and close a circuit and overcurrent protection by using customer-installed fuses. Safety switches are also commonly referred to as a disconnect switch or simply a disconnect.

DOUBLE THROW SAFETY SWITCH

A double throw safety switch is sometimes referred to as a transfer switch. It performs the same function as a safety switch by opening or closing a circuit; however, its primary use is to transfer service from a normal power source to an alternate source (i.e., a residential generator) or to switch from one load circuit to another.
