## SYNCHRONOUS MOTOR FAMILY

### Series T Geared Synchronous Motor

Reversible, permanent magnet synchronous series T geared motors are available in a wide range of speeds. The gear trains are the most rugged with a maximum recommended loading of 250 ounce inches at 1 RPM. All gears are hobbled to AGMA 7 quality. Pinions are extruded from a special steel with a modified long addendum tooth form to provide higher strength. Pinions are held to the same AGMA 7 quality level as the gears. Both pinion and gear teeth are case hardened for wear resistance and rotate upon hardened and ground steel studs.

Standard motors are 115V, 60Hz but other voltages may be specified. Sleeve bearings are standard. Capacitors are required for operation and must be used in the circuit even if the motor is used in a unidirectional mode.

### T, TA Geared

## Wiring Diagram

Current applied to the blue and red leads produces CW rotation. Switching the current to the blue and black leads produces CCW rotation.
