

Power Resistor Thick Film Technology

LTO series are the extension of RTO types. We used the direct ceramic mounting design (no metal tab) of our RCH power resistors applied to semiconductor packages.

DIMENSIONS in millimeters

FEATURE

- 100 W at 25 °C case temperature heatsink mounted
- Direct mounting ceramic on heatsink
- Broad resistance range: R015 to 1M
- Non inductive
- TO-247 package: Compact and easy to mount
- RoHS compliant

CHOICE OF THE HEATSINK

The user must choose according to the working conditions of the component (power, room temperature). Maximum working temperature must not exceed 175 °C. The dissipated power is simply calculated by the following ratio:

$$P = \frac{\Delta T}{[R_{TH} (j - c) + R_{TH} (c - a)]} \quad (1)$$

- P: Expressed in W
 ΔT : Difference between maximum working temperature and room temperature
 $R_{TH} (j - c)$: Thermal resistance value measured between resistive layer and outer side of the resistor. It is the thermal resistance of the component.
 $R_{TH} (c - a)$: Thermal resistance value measured between outer side of the resistor and room temperature. It is the thermal resistance of the heatsink itself (type, shape) and the quality of the fastening device, and the thermal resistance of the thermal compound.

Example:

$R_{TH} (c - a)$ for LTO 100 power rating 10 W at ambient temperature + 25 °C

Thermal resistance $R_{TH} (j - c)$: 1.5 °C/W

Considering equation (1) we have:

$$\Delta T = 175 \text{ }^\circ\text{C} - 25 \text{ }^\circ\text{C} = 150 \text{ }^\circ\text{C}$$

$$R_{TH} (j - c) + R_{TH} (c - a) = \frac{\Delta T}{P} = \frac{150}{10} = 15 \text{ }^\circ\text{C}/\text{W}$$

$$R_{TH} (c - a) = 15 \text{ }^\circ\text{C}/\text{W} - 1.5 \text{ }^\circ\text{C}/\text{W} = 13.5 \text{ }^\circ\text{C}/\text{W}$$

with a thermal grease $R_{TH} (c - h) = 1 \text{ }^\circ\text{C}/\text{W}$, we need a heatsink with $R_{TH} (h - a) = 12.5 \text{ }^\circ\text{C}/\text{W}$.

OVERLOADS

In any case the applied voltage must be lower than the maximum overload voltage of 560 V. The values indicated on the graph below are applicable to resistors in air or mounted onto a heatsink.

ENERGY CURVE

POWER RATING CHART

The temperature of the case should be maintained within the limits specified. To improve the thermal conductivity, surfaces in contact should be coated with a silicone grease and the torque applied on the screw for tightening should be around 1 Nm.
