

MCP1726

1A, Low Voltage, Low Quiescent Current LDO Regulator

Features

- 1A Output Current Capability
- Input Operating Voltage Range: 2.3V to 6.0V
- Adjustable Output Voltage Range: 0.8V to 5.0V
- · Standard Fixed Output Voltages:
- 0.8V, 1.2V, 1.8V, 2.5V, 3.3V, 5.0V
- · Low Dropout Voltage: 220 mV Typical at 1A
- Typical Output Voltage Tolerance: 0.4%
- Stable with 1.0 µF Ceramic Output Capacitor
- Fast response to Load Transients
- Low Supply Current: 140 µA (typ)
- Low Shutdown Supply Current: 0.1 µA (typ)
- Adjustable Delay on Power Good Output
 Short Circuit Current Limiting and
- Overtemperature Protection
- 3x3 DFN-8 and SOIC-8 Package Options

Applications

- High-Speed Driver Chipset Power
- · Networking Backplane Cards
- Notebook Computers
- Network Interface Cards
- · Palmtop Computers
- · 2.5V to 1.XV Regulators

Description

The MCP1726 is a 1A Low Dropout (LDO) linear regulator that provides high current and low output voltages in a very small package. The MCP1726 comes in a fixed (or adjustable) output voltage version, with an output voltage range of 0.8V to 5.0V. The 1A output current capability, combined with the low output voltage capability, make the MCP1726 a good choice for new sub-1.8V output voltage LDO applications that have high current demands.

The MCP1726 is stable using ceramic output capacitors that inherently provide lower output noise and reduce the size and cost of the entire regulator solution. Only 1 μ F of output capacitance is needed to stabilize the LDO.

Using CMOS construction, the quiescent current consumed by the MCP1726 is typically less than 140 μ A over the entire input voltage range, making it attractive for portable computing applications that demand high output current. When shut down, the quiescent current is reduced to less than 0.1 μ A.

The scaled-down output voltage is internally monitored and a power good (PWRGD) output is provided when the output is within 92% of regulation (typical). An external capacitor can be used on the C_{DELAY} pin to adjust the delay from 1 ms to 300 ms.

The overtemperature and short circuit current-limiting provide additional protection for the LDO during system fault conditions.

1.0 ELECTRICAL **CHARACTERISTICS**

Absolute Maximum Ratings †

V _{IN}	6.5V
Maximum Voltage on Any Pin (GND - 0.3	8V) to (V _{DD} + 0.3)V
Maximum Junction Temperature, T_J	+150°C
Maximum Power Dissipation Internal	ly-Limited (Note 6)
Storage temperature	65°C to +150°C

DC CHARACTERISTICS

+ Notice: Stresses above those listed under "Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

Electrical Specifications: Unless otherwise noted, $V_{IN} = (V_R + 0.5V)$ or 2.3V, whichever is greater, $I_{OUT} = 1$ mA, $C_{IN} = C_{OUT} = 4.7 \ \mu\text{F}$ (X7R Ceramic), $T_A = +25^{\circ}\text{C}$. Boldface type applies for junction temperatures, T_J (Note 7) of -40°C to +125°C							
Parameters	Sym	Min	Тур	Max	Units	Conditions	
Input Operating Voltage	V _{IN}	2.3		6.0	V	Note 1	
Input Quiescent Current	۱ _q	-	140	220	μA	$I_L = 0 \text{ mA}, V_{IN} = V_R + 0.5V, V_{OUT} = 0.8V \text{ to } 5.0V$	
Input Quiescent Current for SHDN Mode	ISHDN	_	0.1	3	μA	SHDN = GND	
Maximum Output Current	Ι _{ΟυΤ}	1	_		А	V _{IN} = 2.3V to 6.0V (Note 1)	
Line Regulation	ΔV _{OUT} / (V _{OUT} x ΔV _{IN})	-	0.05	0.3	%/V	$(V_R + 0.5)V \le V_{IN} \le 6V$	
Load Regulation	$\Delta V_{OUT}/V_{OUT}$	-1.5	±0.5	1.5	%	I _{OUT} = 1 mA to 1A, V _{IN} = (V _R + 0.6)V (Note 4)	
Output Short Circuit Current	I _{OUT_SC}	_	1.7		A	$V_{IN} = (V_R + 0.5)V,$ $R_{LOAD} < 0.1\Omega$, Peak Current	
Adjust Pin Characteristics							
Adjust Pin Reference Voltage	V _{ADJ}	0.402	0.410	0.418	V	V_{IN} = 2.3V to V_{IN} = 6.0V, I_{OUT} = 1 mA	
Adjust Pin Leakage Current	I _{ADJ}	-10	±0.01	+10	nA	V_{IN} = 6.0V, V_{ADJ} = 0V to 6V	
Adjust Temperature Coefficient	TCV _{OUT}	_	40		ppm/°C	Note 3	
Fixed-Output Characteristics							
Voltage Regulation	V _{OUT}	V _R - 2.5%	$V_R \pm 0.5\%$	V _R + 2.5%	V	Note 2	
Dropout Characteristics							
Dropout Voltage	V _{IN} -V _{OUT}	-	220	500	mV	I _{OUT} = 1A, V _{IN(MIN)} = 2.3V (Note 5)	

Note 1: The minimum V_{IN} must meet two conditions: V_{IN} \geq 2.3V and V_{IN} \geq (V_R + 2.5%) + V_{DROPOUT}.

2: V_R is the nominal regulator output voltage for the fixed cases. V_R = 1.2V, 1.8V, etc. V_R is the desired set point output

voltage for the adjustable cases. $V_R = V_{ADJ} * ((R_1/R_2)+1)$. Figure 4-1. TCV_{OUT} = $(V_{OUT-HIGH} - V_{OUT-LOW}) *10^6 / (V_R * \Delta Temperature)$. $V_{OUT-HIGH}$ is the highest voltage measured over the 3: temperature range. V_{OUT-LOW} is the lowest voltage measured over the temperature range.

4: Load regulation is measured at a constant junction temperature using low duty-cycle pulse testing. Load regulation is tested over a load range from 1 mA to the maximum specified output current.

5: Dropout voltage is defined as the input-to-output voltage differential at which the output voltage drops 2% below its nominal value that was measured with an input voltage of $V_{IN} = V_R + 0.5V$.

6: The maximum allowable power dissipation is a function of ambient temperature, the maximum allowable junction temperature and the thermal resistance from junction to air. (i.e., T_A, T_J, θ_{JA}). Exceeding the maximum allowable power dissipation will cause the device operating junction temperature to exceed the maximum 150°C rating. Sustained junction temperatures above 125°C can impact device reliability.

7: The junction temperature is approximated by soaking the device under test at an ambient temperature equal to the desired junction temperature. The test time is small enough such that the rise in the junction temperature over the ambient temperature is not significant.
