Direction of Plunger Travel

On the left, the solenoid is at rest, with power removed. On the right, power is applied and the plunger retracts into the body of the solenoid in the direction of the arrow. Optional spring kits return plunger to the "rest" position.

Guardian part numbers look like this:

11 - I - 12VDC

The first number is the model number, the middle letter defines Intermittent or Continuous Duty cycle, and the third number is the power supply to the solenoid.
