## LM2594/LM2594HV <br> SIMPLE SWITCHER ${ }^{\circledR}$ Power Converter 150 kHz 0.5A Step-Down Voltage Regulator

## General Description

The LM2594/LM2594HV series of regulators are monolithic integrated circuits that provide all the active functions for a step-down (buck) switching regulator, capable of driving a 0.5 A load with excellent line and load regulation. These devices are available in fixed output voltages of $3.3 \mathrm{~V}, 5 \mathrm{~V}, 12 \mathrm{~V}$, and an adjustable output version, and are packaged in a 8-lead DIP and a 8-lead surface mount package.
Requiring a minimum number of external components, these regulators are simple to use and feature internal frequency compensationt, a fixed-frequency oscillator, and improved line and load regulation specifications.
The LM2594/LM2594HV series operates at a switching frequency of 150 kHz thus allowing smaller sized filter components than what would be needed with lower frequency switching regulators. Because of its high efficiency, the copper traces on the printed circuit board are normally the only heat sinking needed.
A standard series of inductors (both through hole and surface mount types) are available from several different manufacturers optimized for use with the LM2594/LM2594HV series. This feature greatly simplifies the design of switch-mode power supplies.
Other features include a guaranteed $\pm 4 \%$ tolerance on output voltage under all conditions of input voltage and output load conditions, and $\pm 15 \%$ on the oscillator frequency. External shutdown is included, featuring typically $85 \mu \mathrm{~A}$ standby current. Self protection features include a two stage frequency reducing current limit for the output switch and an over temperature shutdown for complete protection under fault conditions.

The LM2594HV is for applications requiring an input voltage up to 60 V .

## Features

- $3.3 \mathrm{~V}, 5 \mathrm{~V}$, 12 V , and adjustable output versions
- Adjustable version output voltage range, 1.2 V to 37 V ( 57 V for the HV version) $\pm 4 \%$ max over line and load conditions
- Available in 8 -pin surface mount and DIP-8 package
- Guaranteed 0.5 A output current
- Input voltage range up to 60 V
- Requires only 4 external components
- 150 kHz fixed frequency internal oscillator
- TTL Shutdown capability
- Low power standby mode, $\mathrm{I}_{\mathrm{Q}}$ typically $85 \mu \mathrm{~A}$
- High Efficiency
- Uses readily available standard inductors
- Thermal shutdown and current limit protection

## Applications

■ Simple high-efficiency step-down (buck) regulator

- Efficient pre-regulator for linear regulators
- On-card switching regulators
- Positive to Negative convertor

Typical Application (Fixed Output Voltage Versions)

SIMPLE SWITCHER and Switchers Made Simple ${ }^{T M}$ are registered trademarks of National Semiconductor Corporation.
Absolute Maximum Ratings (Note 1)

## LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
