Accessory connection with stranded cable for KE, CE and KG, CG (wiring of voltage selector)

Quick connect terminals
4,8 x 0,8 mm

0881.0076
(length = 70 mm)
0881.0077
(length = 100 mm)

Tap 4,8 x 0,8 mm

0881.0074
(length = 70 mm)
0881.0075
(length = 100 mm)

The connection with stranded cable has to be mounted by customer. Stand = 1,5 mm

Attention:

To guarantee the minimum air and creeping distances, use taps only for terminal
3 / 4 or N for KE, CE
2 / 3 / 4 or N for KG, CG
(concerns voltage selector system 1, 2 and 3).

Order Numbers for connection with stranded cable

BOWDEN CABLE
for type KD/KG, CD/CG
Order details and description

How to specify length of

Bowden cable:

R Mounting parallel to direction of actuation

B1 Actuating part

B2 Power entry module

Dimensions in mm (center of mounting hole [B1], outer surface to center of mounting hole [B2], outer surface)

R	a /	b /	c /
---	-----	-----	-----

S Mounting 90° to direction of actuation

B1 Actuating part

B2 Power entry module

Dimensions in mm (center of mounting hole [B1], outer surface to center of mounting hole [B2], outer surface)

S	a /	b /	c /
---	-----	-----	-----

Ordering example

The following 3 positions are necessary to place an order:

- 1. Order No.
 socket KD14.4199.151
- 2. Order No.
 fuse drawer 4303.2024.03
- 3. Bowden cable
 (type of mounting /
 dimensions in mm) *R a/200 b/180 c/40

* The Order No. for a customer specific Bowden cable you'll get with the acknowledgment.

Delivery time for a customer specific
 Bowden cable sample approx. 2 weeks.

Standard Bowden cable sample,
 Order No. 0886.0101, ex stock

Remote Actuator Technology

The remote actuator cable assembly consists of a wire cable inside of a plastic insulated spiral wire casing.

Identifying a proper routing of the cable assembly is important. Deviations from line to line placement will require bends in the cable with resulting losses in the overall assembly. These inefficiencies show up as friction losses and lost motion.

Frictional losses are increases in actuation force due to losses in the assembly. Lost motion is an undesirable difference between the input end of the assembly and the output end.

The principle element of lost motion is backlash and deflection. Backlash is caused by the wire cable moving inside the casing with the change in direction of motion. It is the function of clearance between the wire cable and casing, plus the number of degrees of bend in the cable assembly. Deflection of the cable assembly, while usually low, can be minimized by anchoring the casing.

This is especially true in those applications of cable assemblies with long lengths and/or large degrees of bend in the system.

All of these losses and resulting inefficiencies can be reduced by the equipment designer through minimizing the total degrees of bend in the assembly. Because of the number of variables effecting proper operation of any remotely actuated switch assembly, it is important that the ordering instructions be used to determine proper cable length and to provide samples for customer approval.

Consult figure for minimum information required to describe cable assembly application.

Bowden cable assembly instruction

Drop Bowden barrel into seat of switch

Slide clamp around cable

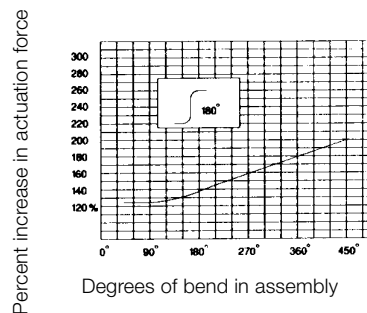

Bowden cable locked into assembly

Type R

Type S

Insulating cover

The terminals of the Schurter appliance couplers can be protected against unintentional contact by the use of an insulation cover.

They are made of flexible thermoplastic (UL 94V-0, black) and can be easily mounted from the rear to the corresponding appliance couplers.

Cut-aways or countersinks on pillars to face inwards.

Cord retaining kits

For protection against loosening or accidental disconnection of the plug connector. Can also be mounted later.

The correct kit type (A-M) for each combination of fixed and free components is shown in the selection chart on page 172. The corresponding Order No. for each kit type is shown in the smaller chart.

Horizontal flanged components are secured to the panel using the kit supplied. Vertical flanged or snap-in components require additional drilling for the cord retaining kit as shown in the diagrams below.

Each cord retaining kit consists of:

- 1 Stainless steel retaining clip
- 2 Nickel plated brass pillars
- 2 Nickel plated brass nuts
- 2 Nickel plated beryllium copper crinkle washers
