

SD57030

RF power transistor
the LdmoST family

Features

- Excellent thermal stability
- Common source configuration
- $P_{OUT} = 30W$ with 13dB gain @ 945MHz
- BeO free package
- Internal input matching
- In compliance with the 2002/95/EC european directive

Description

The SD57030 is a common source N-channel enhancement-mode lateral Field-Effect RF power transistor designed for broadband commercial and industrial applications at frequencies up to 1.0 GHz. The SD57030 is designed for high gain and broadband performance operating in common source mode at 28 V. It is ideal for base station applications requiring high linearity.
