## D2SW

## Sealed Subminiature Basic Switch

- High quality, watertight switch meets IP67 (IEC 529) requirements (lead wire types) and IP50 (terminal types)
- Monoblock construction assures high sealing capability and is ideal for applications where water spray or dust is prevalent
- Perfect for automotive, vending, factory machines, etc. which require environmentally resistive capabilities
- Wide operating temperature range of $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$
- ROHS Compliant

## Snap Action Switch D2SW

## Watertight Miniature Snap Action Switch

- High-quality watertight miniature snap action switch meets IP67 (IEC 529) requirements (for lead wire types) and IP50 (for terminal types)
- Monoblock construction assures high sealing capability and is ideal for dusty places or where water is sprayed
- Wide operating temperature range of $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$
- Perfect for the automobile, agriculture machinery, automatic vending machine, refrigerator, ice-manufacturing, bath equipment, hot-water supply, air conditioner, and factory machine industries, which require highly environment-resistive capabilities
- RoHS Compliant

PCB Mounting

Note: Unless otherwise specified, a tolerance of $\pm 0.4 \mathrm{~mm}$ applies to all dimensions.

## Precautions

## $\square$ Mounting

Use two M2.3 mounting screws with spring washers to mount the switch. Tighten the screws to a torque of 0.23 to $0.26 \mathrm{~N} \cdot \mathrm{~m}(2.3$ to $2.7 \mathrm{kgf} \cdot \mathrm{cm}$ )
Mounting holes

When soldering a lead wire to a terminal of the D2SW, use a soldering iron with a maximum capacity of 60 W and do not take more than 5 seconds to solder the lead wire, otherwise the characteristics of the D2SW may be altered.
Make sure that there is no icing when using the D2SW at low ambient temperatures.

## ■ Operations

Make sure that the switching object is perfectly separated from the actuator when the switch is not operated and the actuator is pressed appropriately by the switching object when the switch is operated.
The switch should be set so that its stroke will be within the rated OT when the switch is operated.
Install the switching object so that its moving direction is the same as that of the actuator.
Handle D2SW models with pin plungers with care so that the sealing rubber parts around the pin plungers will not be damaged.

## Enclosure Ratings

The D2SW was tested under water and passed the following watertightness test, which however, does not mean that the D2SW can be used in the water. JIS C0929 (rules for testing the watertightness of electrical devices and materials), class 7 (watertightness test). Refer to the following illustration for the test method.
IEC Publication 529, class IP67. Refer to the following illustration for the test method.

Note: The object to be tested is left in the water for 30 minutes on condition that the distance between the surface of the water and the top of the object be 15 cm minimum, and the distance between the surface of the water and the bottom of the object be 1 m minimum.
