

Description

The dual-output DFC10 Series provides power solutions to meet commercial and industrial requirements. With power densities above 11 watts per cubic inch (0.67 watts per cm³), overcurrent protection, and five-sided shielded case, the DFC10 meets rigorous needs in an industry-standard case size. The 120 kHz operating frequency of the DFC10 Series allows an increased power density while including adequate heatsinking and input/output filtering. This eliminates the need for external components in most applications. Full overload protection is provided by pulse-by-pulse current limiting on models with 48V input.

Features

- RoHS lead solder exemption compliant
- High power density, up to 11 watts per cubic inch
- Efficiencies to 79%
- Fully-isolated, fully-filtered design
- Greater than 700V isolation
- Overcurrent protection
- Five-sided, shielded copper case
- Ultra-wide range input (4:1)

Selection Chart					
Model	Input Range VDC		Output		
	Min	Max	VDC	mA	Power W
DFC10U24D5	9	36	±5	±850	9
DFC10U24D12	9	36	±12	±400	10
DFC10U24D15	9	36	±15	±320	10
DFC10U48D5	18	72	±5	±800	8
DFC10U48D12	18	72	±12	±415	10
DFC10U48D15	18	72	±15	±330	10

Model numbers highlighted in yellow or shaded are not recommended for new designs.

Mechanical tolerances unless otherwise noted:

X.XX dimensions: ±0.03 inches

X.XXX dimensions: ±0.005 inches

General Specifications (1)				
All Models				Units
Isolation (2)				
Isolation Voltage Input to Output 10 µA Leakage	MIN	700	VDC	
Input to Output Capacitance	TYP	350	pF	
Environmental				
Case Operating Range, Tc	MIN MAX	-40 85	i C	
Case Functional Range (3)	MIN MAX	-50 100	i C	
Storage Range	MIN MAX	-55 105	i C	
General				
MTBF (Calculated)	TYP	800,000	HRS	
Thermal Impedance (4)	TYP	16	i C/Watt	
Unit Weight	TYP	1.2/34	oz/gm	
Mounting Options				

Pin	Function
1	+ INPUT
2	- INPUT
3	+ OUTPUT
4	COMMON
5	- OUTPUT

NOTES

- (1) All parameters measured at Tc = 25°C, nominal input voltage and full rated load unless otherwise noted.
- (2) Case is tied to the COMMON output pin.
- (3) The functional temperature range is intended to give an additional data point for use in evaluating this power supply. At the low functional temperature the power supply will function with no side effects, however, sustained operation at the high functional temperature will reduce expected operational life. The data sheet specifications are not guaranteed beyond the case operating range.
- (4) The case thermal impedance is specified as the case temperature rise over ambient per package watt dissipated.

NUCLEAR AND MEDICAL APPLICATIONS - Power-One products are not designed, intended for use in, or authorized for use as critical components in life support systems, equipment used in hazardous environments, or nuclear control systems without the express written consent of the respective divisional president of Power-One, Inc.

TECHNICAL REVISIONS - The appearance of products, including safety agency certifications pictured on labels, may change depending on the date manufactured. Specifications are subject to change without notice.

	MAX	250						
Short Circuit Protection		Short Term Current Limit			Pulse by Pulse Current Limit			

NOTES

- All parameters measured at T_c = 25°C, nominal input voltage and full rated load unless otherwise noted.
- Noise measurement bandwidth is 0-20 MHz. RMS noise is measured over a 0.01-1 MHz bandwidth. To simulate standard PCB decoupling practices, output noise is measured with a 10µF tantalum and 0.01µF ceramic capacitor located 1 inch away from the converter.
- The converter may be safely operated at any load from zero to the full rating. Dynamic response of the converter may degrade if the converter is operated with less than 25% output load.
- Load regulation is defined for loading/unloading both outputs simultaneously. Load range is 25 to 100%.
- Cross regulation is defined for loading/unloading one output while the other output is kept at full load. Load range is 25 to 100%.
- Short term stability is specified after a 30 minute warmup at full load, constant line and recording the drift over a 24 hour period.

DFC10 SERIES APPLICATION NOTES:

External Capacitance Requirements

No external capacitance is required for operation of the DFC10 Series. If a capacitive input source is farther than 1" from the converter, an additional capacitor may be required at the input pins for proper operation. This input capacitor should have an ESR greater than 0.25 ohms. Input capacitors with an ESR less than 0.25 ohms may cause peaking of the input filter and actually degrade circuit performance.

External output capacitance is not required for operation, however it is recommended that 1µF to 10µF of tantalum and 0.001 to 0.1µF ceramic capacitance be selected for reduced system noise. Additional output capacitance may be added for increased filtering, but should not exceed 400µF.
