=NOTES=

- \*1. At 100VAC/ 200VAC and Maximum. Output power (Convection cooling), Ta=25°C.
- \*2. For cases where conformance to various safety specs (UL,CSA, EN) are required to be described as 100-120VAC, 200-240VAC, 50/60 Hz on name plate.
- \*3. Please refer to Fig A for measurement determination of line & load regulation and output ripple voltage.
- \*4. From 85 - 132VAC / 170 - 265VAC, constant load.
- \*5. From Min. load - Full load ( Maximum power ), constant input voltage.
- \*6. From 0°C - +50°C, constant input voltage and load.
- \*7. Current limiting with automatic recovery. Avoid to operate over load or dead short for more than 30 seconds.
- \*8. Over voltage clamping by zener diode.
- \*9. At standard mounting method, Fig B.
- \*10. Peak current operation is less than 10 sec. with duty factor less than 30%.  
In addition, it does not has to satisfy the total regulation specification.
