

# The Industry Standard Just Got Better!

Greenlee is proud to introduce fully upgraded versions of its industrystandard tone and probe tracing kits. These all new kits offer superior tracing for low voltage applications such as telephone, data and security alarm wiring. Essential equipment for the internal wiring technician, the Greenlee tone and probe kits provide the ability to check voltage on wire pairs as well as generate a tagging tone along the wire, which is then picked up by the tracing probe.

Featuring overall improved internal circuitry in both the amplifier and the tone generator, all of the new tone and probe kits promise to provide an enhanced customer experience for tracing and identifying single conductors or cables within bundles, either at midpoint or at remote ends.

Additional new features are available on select models to meet the needs for any tracing application. The 601K-G Basic Tracing Kit

features volume control and external warble-select. The 701K-G Professional Tone & Probe Tracing Kit takes the functionality a step further, featuring an LED headlight, headset jack, short circuit beeper and external warble-select. Finally, the 701K-G/6A Professional Tone & Probe Tracing Kit has all the features of the 701K-G but incorporates upgraded Telco-grade angled-bed-of-nails (ABN) clips for those larger jobs. Best of all, each tone and probe kit in this new series is backed by a one year limited warranty.

All of the new tone and probe kits are assembled in the USA and are CE certified. When it comes to superior tracing capability, Greenlee's new tone and probe kits are faster, safer and easier than ever before.
