4.0 WI.FREESTAR MODULE DESCRIPTION

The Wi.Freestar module is a 2.4 GHz 802.15.4 data transceiver module intended for Very Low Cost Wireless Applications. The module design is based on the MC13192/3 RF transceiver from Freescale which is based on the IEEE 802.15.4 standard and intended for use in Zigbee applications. It provides for enhanced range performance over standard 802.15.4/Zigbee implementations with the integrated 100mW power amplifier. It implements a proprietary communications protocol based on the 802.15.4 standard streamlined to lower cost and power consumption. The Wi.Freestar module design consists of the MC13192, the MC9S08GT16CFD uP, 100 mW PA, and integrated PCB trace antenna. The module is FCC and CE certified for fast and simple integration into end applications. The Wi.Freestar Module provides the lowest cost, best in class range in an extremely small form factor.
